AI, War & Pandemic-Resilience Stock Research

Version 2.1: which stocks could double by October 2029? All 117 holdings categorized, financially evaluated, and scored by a machine-learning model trained and tested on 1967-2026 stock history, combined with a fundamentals model.

As of October 29, 2026. Supersedes expanded_stock_research_109_investments_2026-10-28.pdf (v1, 273 pages), which was fully reviewed: all 100 company financial dossiers (C001-C100), 9 funds and all 3-year scenario models (P01-P64, N01-N25, E01-E20).

Goal	Answer in one line
Main goal	Find stocks with a high chance of at least doubling in 3 years. A double needs ~26% compound annual price gain, which the S&P; 500 achieved in only 3 of 48 three-year windows (6%).
Universe	117 investments = 100 v1 companies + 8 v2 additions (MSFT, PLTR, CEG, PANW, TMO, ABT, GILD, MRNA) + 9 funds, sorted into 12 categories (10 for the AI, war and pandemic themes, 11 solar and renewables, 12 fintech and consumer) plus a fund group.
Prediction models	(1) Trained ML model: gradient boosting + logistic regression trained on 66,010 historical cases (690 stocks, start dates 1967-2023), walk-forward tested on unseen years, calibrated. (2) Rules model: v1 scenarios + fundamentals factor score. Final P(2x) = 50/50 blend. The ML model also predicts the chance of losing half your money.
What the testing showed	On unseen years the ML model's top 10% of picks doubled 31-34% of the time vs an 18-22% base rate (about 1.6x better). Doubling is only weakly predictable (AUC 0.58-0.63); big losses are much more predictable (AUC 0.75).
Result	Tier A (final P(2x) 30%+, FS 70+, ML loss risk 15% or less): 6. Tier B (30%+, higher risk): 8. Tier C (25-29%): 17. The best final score is ~46%: no stock is close to a sure double.
Top 5 by model	APP (46%), NU (40%), VRT (37%), NVDA (36%), AVGO (35%)

Disclaimer. Research and education, not personalized advice; the author is not a licensed financial advisor. The models cannot see the future. The ML model learned from past price behaviour only (no historical fundamentals were available), its training data lacks most delisted companies, and past patterns may not repeat. Size positions to your own risk tolerance; consider a licensed advisor.

1. Doubling leaderboard: the 25 highest-probability stocks

Sorted by final P(2x by Oct 2029) = 50% trained ML model + 50% rules model. ML P(-50%) = trained model's chance the stock ends at half or less. Row colour = tier (green A, yellow B, blue C). Financials from the v1 dossiers unless marked v2.

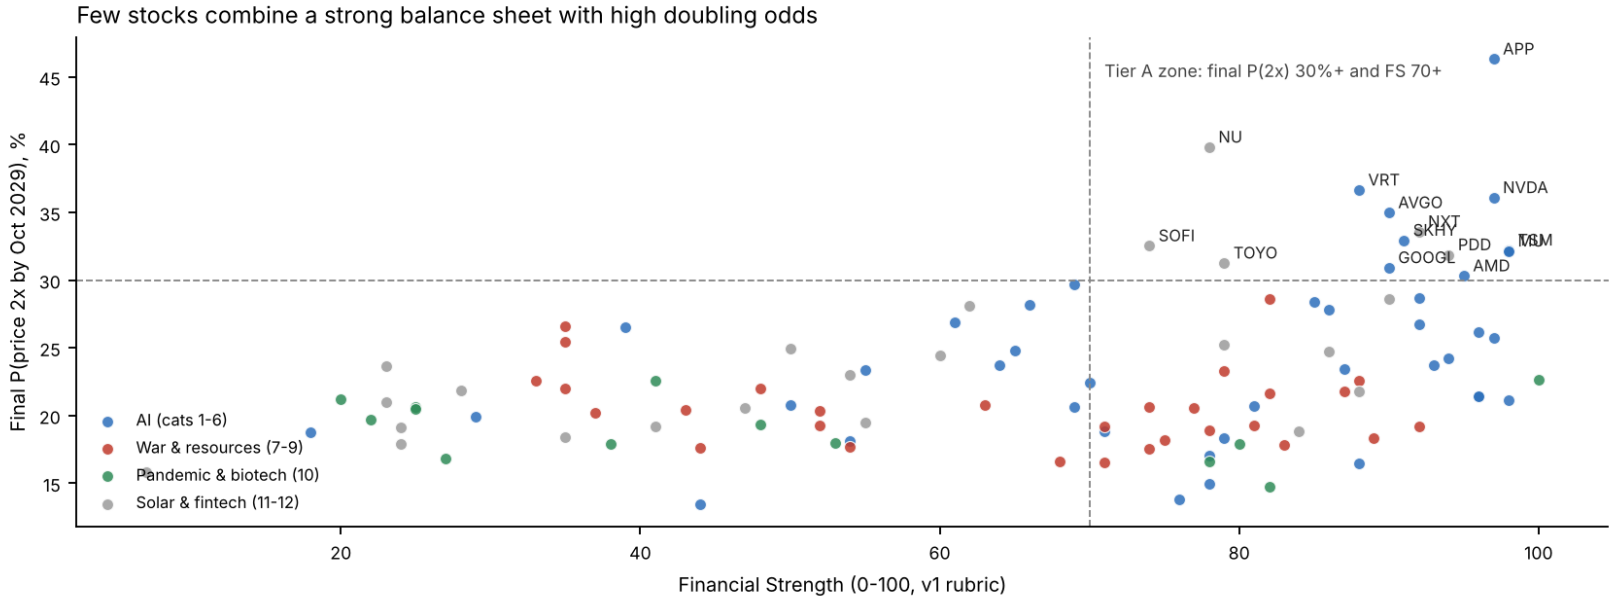

#	Ticker / company	Category	Final P(2x)	ML / Rules	ML P(-50%)	FS	Rev growth	Op mgn	Price balance	Driver to watch	Main risk
1	**APP** AppLovin	Hyperscalers & AI Platforms	**46%**	27% / 66%	31%	97	72%	77%	Supported	Op margin 77%, FCF margin 66%, revenue CAGR 72%; P/E ~20x (v1 'Supported') - rare mix of growth and a modest price.	Ad-tech platform concentration and regulatory/short-seller scrutiny; e-commerce ad expansion must keep working.
2	**NU** Nu Holdings	Fintech & Consumer (outside the 3 themes)	**40%**	22% / 58%	8%	78	37%	52%	Conditional	Profitable Latin American digital bank: revenue CAGR 37%, P/E ~16x; base case assumes ~30%/yr earnings growth.	Brazil/Mexico credit cycle and FX; bank-style leverage.
3	**VRT** Vertiv	AI Power & Data-Center Infrastructure	**37%**	22% / 51%	21%	88	61%	20%	Demanding	Liquid cooling + power for every Nvidia rack generation.	~50x+ earnings; revenue slips on multiphase projects (Q2).
4	**NVDA** NVIDIA	AI Semiconductors	**36%**	17% / 56%	9%	97	106%	65%	Demanding	Rubin ramp + sovereign/enterprise 'ACIE' demand (+138% y/y) keep beats coming.	Top two direct customers were 22% and 14% of FY26 revenue; any hyperscaler capex pause hits first.
5	**AVGO** Broadcom	AI Semiconductors	**35%**	19% / 51%	13%	90	86%	49%	Demanding	Custom XPUs for six frontier labs; mgmt outlines ~$115B AI revenue in FY27.	Customer concentration in a few AI labs; gross margin dilution from XPU mix (75%, -210 bp q/q).
6	**NXT** Nextpower	Solar & Renewables	**34%**	25% / 42%	20%	92	19%	20%	Conditional	Solar tracker leader, near-zero debt, P/E ~21x; utility-scale solar for data-center power.	US tax-credit policy and interest rates.
7	**SKHY** SK hynix	AI Memory & Semiconductor Equipment	**33%**	21% / 45%	41%	91	72%	68%	Conditional	HBM leader (~50% share); P/E ~6.5x on peak earnings; memory sold out through 2029.	Memory price reversal; Korean listing (ADR access limited).
8	**SOFI** SoFi Technologies	Fintech & Consumer (outside the 3 themes)	**33%**	24% / 41%	15%	74	32%	19%	Demanding	Revenue CAGR 32%; base case assumes ~32%/yr earnings growth.	Share count growing ~15%/yr; credit losses; demanding P/E ~31x.
9	**TSM** Taiwan Semiconductor Manufacturing	AI Semiconductors	**32%**	17% / 48%	8%	98	41%	58%	Demanding	Sole supplier of 2nm/3nm at scale; pricing power through 2028.	Taiwan Strait geopolitical tail risk; N2 ramp costs pressure margins.
10	**MU** Micron Technology	AI Memory & Semiconductor Equipment	**32%**	20% / 45%	36%	98	379%	75%	Conditional	Sold-out HBM/DRAM through 2029 sustains super-normal margins; only US-based memory maker.	Memory is cyclical: a 40% price drop would compress EPS sharply; analyst targets range $361-$3,000.
11	**PDD** PDD Holdings	Fintech & Consumer (outside the 3 themes)	**32%**	21% / 43%	11%	94	32%	22%	Supported	P/E ~8x, net cash ~CNY450B, FCF margin ~25%; Temu international growth.	China/US trade and delisting risk; governance transparency.
12	**TOYO** TOYO	Solar & Renewables	**31%**	28% / 34%	40%	79	162%	20%	Conditional	Revenue CAGR 162%, P/E ~1.6x on recent peak margins.	Small Japanese/Vietnam solar cell maker; margins may normalize; dilution.
13	**GOOGL** Alphabet	Hyperscalers & AI Platforms	**31%**	17% / 45%	7%	90	25%	33%	Demanding	Full-stack AI (TPUs, Gemini) with Search still growing; TPU sales to third parties.	Second straight negative-FCF quarter; equity-stake gains/losses (SpaceX, Anthropic) add volatility.
14	**AMD** Advanced Micro Devices	AI Semiconductors	**30%**	19% / 41%	30%	95	50%	16%	Demanding	Second-source GPU winner; mgmt expects Data Center revenue to more than double in 2027.	Software (ROCm) gap vs CUDA; higher capex weighed on shares after Q2.
15	**GEV** GE Vernova	AI Power & Data-Center Infrastructure	**30%**	-* / 40%	-	69	25%	8%	Conditional	Multi-year sold-out gas turbines + grid equipment; services backlog $93B.	Wind segment drag; execution on capacity expansion; premium multiple.
16	**QCOM** Qualcomm	AI Semiconductors	**29%**	19% / 39%	10%	92	11%	24%	Supported	FS 92, P/E ~21x ('Supported'); edge-AI and PC chips.	Smartphone dependence; Apple modem loss.
17	**FSLR** First Solar	Solar & Renewables	**29%**	20% / 37%	16%	90	25%	34%	Conditional	Op margin 34%, P/E ~11x; US-made thin-film modules.	Earnings rely on tax credits; policy risk.

#	Ticker / company	Category	Final P(2x)	ML / Rules	ML P(-50%)	FS	Rev growth	Op mgn	Price balance	Driver to watch	Main risk
18	**LYSDY** Lynas Rare Earths	Strategic Resources	**29%**	19% / 39%	11%	82	45%	24%	Demanding	Largest rare-earth producer outside China; revenue CAGR 45%.	Rare-earth price swings; P/FCF ~84x.
19	**META** Meta Platforms	Hyperscalers & AI Platforms	**28%**	18% / 39%	8%	85	22%	38%	Demanding	AI-driven ad targeting lifts monetization.	No cloud business to resell capacity; payback depends on ads alone.
20	**AMSC** American Superconductor	AI Power & Data-Center Infrastructure	**28%**	23% / 33%	32%	66	43%	4%	Demanding	Grid/Navy power systems; revenue CAGR 43%, net cash.	Small cap; share count +21%/yr.
21	**ARRY** Array Technologies	Solar & Renewables	**28%**	25% / 31%	27%	62	-10%	7%	Conditional	Revenue CAGR -10%, op margin 7%	Base case needs a re-rating
22	**PLTR** Palantir Technologies	AI Software & Cybersecurity	**28%**	23% / 32%	24%	86	93%	60%	Demanding	Rule-of-40 far above peers; defense 'operating system' position.	~120x+ forward earnings leaves no room for a miss; political/ICE controversy; short sellers active.
23	**SYM** Symbotic	Physical AI & Robotics	**27%**	22% / 31%	23%	61	38%	0%	Conditional	Revenue CAGR 38%, op margin 0%	Base case needs growth to persist
24	**MSFT** Microsoft	Hyperscalers & AI Platforms	**27%**	15% / 38%	5%	92	16%	47%	Conditional	Self-funded AI buildout; 30M+ paid M365 Copilot seats (Jul).	Capex re-accelerates in H1 2027 on component costs; OpenAI-related exposure.
25	**ONDS** Ondas	Defense Tech, Drones & Allied Rearmament	**27%**	30% / 24%	43%	35	80%	-121%	Not Established	Revenue CAGR 80%, op margin -121%	Base case needs growth to persist

* = too little price history for the ML model; the universe median (20%) is used in the blend. Rev growth = two-year historical revenue CAGR from v1, replaced by latest-quarter y/y growth where Q2/Q3 2026 results were reviewed (NVDA, AVGO, TSM, AMD, MU, GOOGL, VRT, GEV, PLTR).

2. Twelve categories at a glance

#	Category	Theme	Holdings	Avg P(2x)	Best doubling candidate	Tier A/B names
1	AI Semiconductors: Compute & Foundry	AI	6	31%	NVDA (36%)	NVDA, AVGO, TSM, AMD
2	AI Memory & Semiconductor Equipment	AI	5	28%	SKHY (33%)	SKHY, MU
3	Hyperscalers & AI Platforms	AI	5	31%	APP (46%)	APP, GOOGL
4	Physical AI & Robotics	AI	16	20%	SYM (27%)	-
5	AI Power & Data-Center Infrastructure	AI + energy security	6	26%	VRT (37%)	VRT
6	AI Software & Cybersecurity	AI + cyber war	4	22%	PLTR (28%)	-
7	US Defense Primes & Defense Electronics	War	10	19%	CW (22%)	-
8	Defense Tech, Drones & Allied Rearmament	War	7	22%	ONDS (27%)	-
9	Strategic Resources: Nuclear Fuel & Critical Minerals	War + AI power	12	21%	LYSDY (29%)	-
10	Biotech, Pandemic Preparedness & AI Drug Discovery	Pandemic	13	19%	REGN (23%)	-
11	Solar & Renewables	Energy transition	17	23%	NXT (34%)	NXT, TOYO
12	Fintech & Consumer (outside the 3 themes)	Outside themes	7	28%	NU (40%)	NU, SOFI, PDD
F	Theme Funds (ETFs / closed-end)	Diversified	9	24%	SMH (27%)	-

3. Rules model: scenarios + fundamentals (50% of the final score)

Component 1: scenario simulation. Each stock has bear / base / bull 3-year price multiples (v1 analyst scenarios, weights 25/50/25). Each scenario is treated as a lognormal outcome with 25% log-volatility, and the model sums the probability mass above 2.0x. Results reported after v1's Oct 27 cutoff adjust the multiples (table below).

Component 2: fundamentals factor model (Doubling Potential Score, 0-100). Growth engine 30 pts (revenue growth 40%+ = 30, 25%+ = 25, 15%+ = 19, 8%+ = 12, 0%+ = 6). Valuation headroom 20 (v1 Price-Fundamentals Balance: Supported 18, Conditional 14, Demanding 7-10, Not established 5). Financial strength 20 (FS / 5). Theme tailwind 15 (AI compute 15 ... pandemic 8). Downside risk 15 (from the bear multiple; -3 if share count grows >10%/yr). The score maps to probability with a capped logistic: $P = 0.65 / (1 + e^{-(DPS-68)/9})$, so a score of 50 is ~8%, 68 is ~33% and 85 is ~56%.

Rules score = average of the two components (funds use component 1 only). It is blended 50/50 with the trained ML model (section 4). Final tiers: **A** final P(2x) 30%+, FS 70+ and ML loss risk 15% or less; **B** 30%+ otherwise; **C** 25-29%; **D** 18-24%; **E** under 18%.

Check	Result	What it means
Agreement with v1	Correlation 0.69 between v2 ensemble and v1 2x illustrations	The independent factor view broadly confirms v1 but re-ranks names where financials disagree with scenarios (e.g., SOFI and ARRY fall, TSM, MU, SK hynix and MSFT rise).
Universe average	26% mean rules P(2x)	Higher than the market base rate because the list is pre-screened for growth themes; treat absolute levels as optimistic and the ranking as the more useful output.
Volatility sensitivity	Top-10 average 52% at 18% vol vs 50% at 35% vol (scenario part)	Rankings are stable; absolute odds shift by a few points with the volatility assumption.
Limits	Weights are analyst choices	This half cannot be back-tested because historical fundamentals were not available; the ML half (section 4) supplies the tested evidence.

Post-cutoff adjustments applied to scenario multiples

Ticker	Multiplier	Evidence
VRT	x1.07	Q3 (Oct 28): organic orders >100% y/y; FY guide +$650M
GEV	x1.08	Q3 (Oct 28): backlog $176B -> ~$197B; orders +96%
GOOGL	x1.06	Shares -10% on Oct 29 lowers entry; offset by negative FCF
META	x0.97	Negative FCF (-$2.1B) and capex raise
RNMBY	x0.95	Operating FCF -$1.81B in H1; -35% YTD on program cancellation
AVAV	x0.95	Restatement and $1.5B SCAR backlog reversal

4. Trained machine-learning model (50% of the final score)

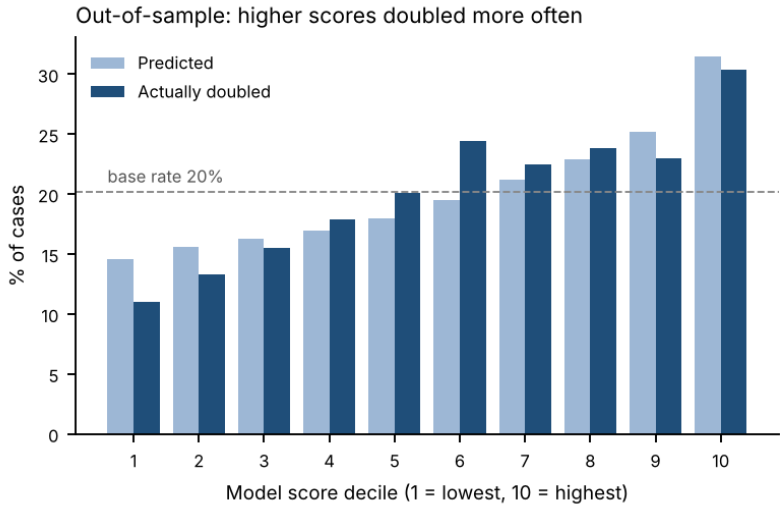

Data. Monthly total-return prices (Yahoo Finance) for every company in the S&P 500 at any time since 1996 (1209 tickers; 765 with data, 444 delisted names unavailable) plus our 117 holdings, and market history back to 1955 (Shiller S&P series). Each example is a stock on a date; the label is whether its price was at least 2x 36 months later. 66,010 examples from 690 stocks, start dates 1967-2023; 19.8% doubled.

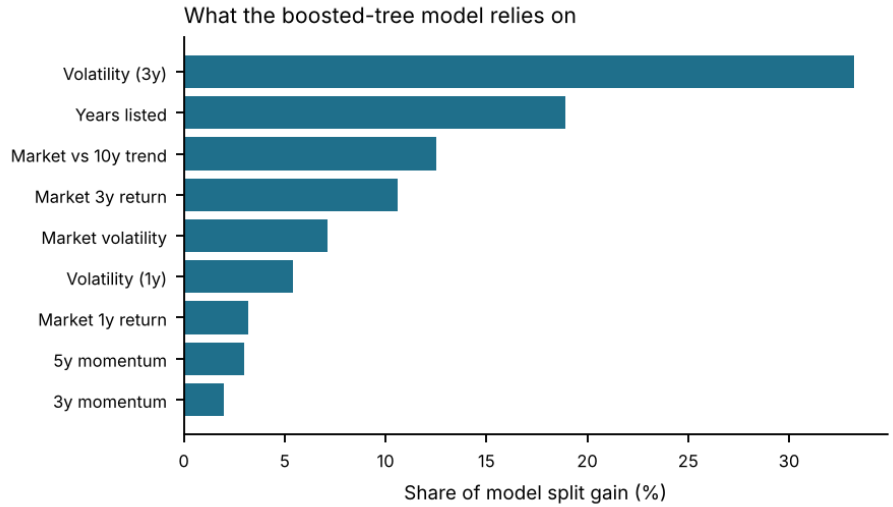

Features (17, all known at the time). Stock momentum over 3, 12, 36 and 60 months; volatility (1y, 3y); drawdown from 3-year high; biggest monthly gain; price vs 5-year average; years listed; beta; return vs market; market 1y and 3y return, market vs its 10-year trend, market volatility.

Models. Gradient-boosted decision trees (120 depth-2 trees, histogram splits) and L2 logistic regression, averaged, then calibrated (Platt scaling on out-of-sample predictions). A second pair trained on 36-month windows scores recent listings (CEG, NXT, NU, TOYO and others). A companion model with the same features predicts a 50%+ loss.

Testing: walk-forward, never on data the model has seen. Each test period starts 3 years after training ends, so no training label overlaps a test date.

Test period	Base rate (doubled)	AUC trees / blend	Top 10% picks doubled	Top 5% doubled	Bottom 20% doubled	Brier blend vs base
F1 (train 1967-1997, test 2001-2005)	22%	0.58 / 0.58	30%	31%	18%	0.200 vs 0.172
F2 (train to 2005, test 2009-2014)	22%	0.59 / 0.59	34%	40%	18%	0.167 vs 0.170
F3 (train to 2012, test 2016-2023)	18%	0.62 / 0.63	31%	30%	8%	0.146 vs 0.150

Reading the results. AUC 0.5 is a coin flip and 1.0 is perfect; 0.58-0.63 means the model separates future doublers from the rest modestly but consistently, in three different eras. Big losses are far more predictable (loss model AUC 0.75). The model learned mostly that young, volatile stocks double more often, and that doubles become rarer after strong 3-year market runs. Today the S&P 500 is ~85% above its level 3 years ago and well above its 10-year trend, so the model scores almost every stock below its historical base rate.

Known biases. Survivorship: most delisted companies are missing, which inflates doubling rates and understates loss rates. No fundamentals or valuation: free historical fundamentals were not reachable, so the rules half covers them. The 1967-1985 period has few stocks. Foreign listings are measured in local currency.

Category 1 AI Semiconductors: Compute & Foundry

Accelerators and leading-edge foundry. Nvidia guided its October quarter to $108B; TSMC guided Q4 to roughly +58% y/y and says the AI demand-supply gap is still large.

Ticker / company	FS	Rev CAGR	Op mgn	FCF mgn	Net cash (debt)	Share CAGR	P/E	P/FCF	Price balance	Bear/base/bull	Rules P(2x)	ML P(2x)	ML P(-50%)	Final P(2x)	Tier

Latest results and the doubling case for key names

Ticker	Latest reported (cited period)	What gets it to 2x	What stops it
APP	Op margin 77%, FCF margin 66%, revenue CAGR 72%; P/E ~20x (v1 'Supported') - rare mix of growth and a modest price.	Op margin 77%, FCF margin 66%, revenue CAGR 72%; P/E ~20x (v1 'Supported') - rare mix of growth and a modest price.	Ad-tech platform concentration and regulatory/short-seller scrutiny; e-commerce ad expansion must keep working.
GOOGL	Q3 2026: revenue $127.6B (+25%); Google Cloud $30.7B (+103%); op margin 31.8%; FCF -$9.07B. 2026 capex $195-205B, 'significant increase' in 2027. Shares fell ~10% Oct 29.	Full-stack AI (TPUs, Gemini) with Search still growing; TPU sales to third parties.	Second straight negative-FCF quarter; equity-stake gains/losses (SpaceX, Anthropic) add volatility.
META	Q3 2026 (Oct 21): FCF -$2.12B; 2026 capex guide raised at the low end to $135-145B.	AI-driven ad targeting lifts monetization.	No cloud business to resell capacity; payback depends on ads alone.
MSFT	FQ1 FY27 (Jul-Sep 2026): Azure +48%; capex forecast trimmed to $170B; generated ~$19B positive FCF while peers went negative. FY26 revenue >$331B.	Self-funded AI buildout; 30M+ paid M365 Copilot seats (Jul).	Capex re-accelerates in H1 2027 on component costs; OpenAI-related exposure.
AMZN	Q3 results due after close Oct 29, 2026. 2026 capex guide ~$220B, the largest; trailing capex ran above operating cash flow.	AWS re-acceleration on AI infrastructure demand.	Highest capex burden in the group; memory cost inflation flagged.

FS = v1 Financial Strength 0-100 (v2 additions estimated with the same rubric). Net cash and margins are latest TTM in the issuer's statement currency. Rules = scenarios + fundamentals model; ML = trained model (* = too little history, median used); Final = 50/50 blend.

Category 4 Physical AI & Robotics

Robots, surgical systems, machine vision, autonomy. Strong balance sheets, but most names are priced for steady compounding rather than a 3-year double.

Latest results and the doubling case for key names

Ticker	Latest reported (cited period)	What gets it to 2x	What stops it
LYSDY	Largest rare-earth producer outside China; revenue CAGR 45%.	Largest rare-earth producer outside China; revenue CAGR 45%.	Rare-earth price swings; P/FCF ~84x.
BWXT	Naval reactors + HALEU/TRISO fuel; ~18% revenue growth expected for 2026; ~38x forward earnings (mid-2026).	Sole-source US Navy nuclear supplier; SMR fuel.	Premium valuation; government program timing.
CCJ	Closed $83.84 Oct 28 (52-wk range $76.92-135.24; ~42% below record); 2026 delivery guide 29-32M lb; Q2 realized price $67.79/lb (+18%). Reports Oct 30.	Contract book reprices upward as old deals roll off; Westinghouse stake.	Rate-sensitive; deliberately lower 2026 volumes.
MP	Only fully integrated US rare-earth miner-to-magnet producer (Mountain Pass, CA).	National-security magnet supply; government-backed demand.	Chinese price competition; early-stage magnet ramp.

FS = v1 Financial Strength 0-100 (v2 additions estimated with the same rubric). Net cash and margins are latest TTM in the issuer's statement currency. Rules = scenarios + fundamentals model; ML = trained model (* = too little history, median used); Final = 50/50 blend.

Research and education only, not personalized investment advice. Model probabilities are judgment-based estimates, not guarantees. Verify prices and filings before acting.

Category 10 Biotech, Pandemic Preparedness & AI Drug Discovery

Pandemic response capacity (tools, diagnostics, antivirals, vaccines) plus AI drug discovery. WHO still rates H5N1 public risk as low; clinical-stage names are binary.

Latest results and the doubling case for key names

Ticker	Latest reported (cited period)	What gets it to 2x	What stops it
TMO	Q3 2026 (Oct 21): revenue $12.14B (+9%, 6% organic); adj EPS $6.68 (+15%); adj op margin 24.5%. FY guide raised to $47.7-48.2B, adj EPS $25.13-25.43.	Supplied PCR, sampling and bioproduction in COVID; same role in any outbreak.	Biotech funding cycle; China exposure.
MRNA	Up ~600% in 2026 (market cap ~$90B in Oct) after cancer-vaccine (intismeran) data and flu approval; H1 2026 revenue $534M, net loss $2.1B.	Fastest pandemic vaccine platform; oncology optionality.	Binary trial risk; heavy losses; outbreak headlines move it more than revenue does.
GILD	Q2 2026: revenue $7.8B (+10%); HIV +12%; no major patent expiry until 2036; Veklury (COVID antiviral) shrinking. Q3 due Oct 29 after close.	Proven antiviral platform; cash flow funds pipeline.	Pandemic upside is small vs HIV core.
ABT	Q3 2026 (Oct 21): sales +14.5% reported (+7.0% comparable); diagnostics +46.7% reported after Exact Sciences deal; adj EPS $1.42; FY EPS guide reaffirmed.	Rapid/molecular test scale (BinaxNOW-type capacity).	Integration of Exact Sciences; GAAP EPS dilution.

FS = v1 Financial Strength 0-100 (v2 additions estimated with the same rubric). Net cash and margins are latest TTM in the issuer's statement currency. Rules = scenarios + fundamentals model; ML = trained model (* = too little history, median used); Final = 50/50 blend.

Category 11 Solar & Renewables

The 20-company solar/renewable section from v1 (17 here; GEV, NEE and AMSC moved to Category 5). Demand depends on subsidies and rates more than on AI, war or pandemics.

Category: 1-10 theme categories; 11 solar and renewables; 12 fintech and consumer; Fund = theme funds.

Appendix B. How the v1 report was re-categorized

v1 had nine sections built up over successive requests: six strategic themes (55 companies + 9 funds), a 25-company screen, and a 20-company solar/renewable extension. v2 places each holding in exactly one category.

v1 section	v2 destination
1. Physical AI and robotics (ISRG, FANUC, Keyence, ROK, TER, Yaskawa, SYM) + robotics additions (TSLA, CGNX, NOVT, SYK, DE, OUST, AUR, VPG, FFR, EMR)	Cat 4 Physical AI & Robotics (TER moved to Cat 2)
2. Chips and semiconductors + AMD, QCOM, AMBA	Cat 1 (compute/foundry) and Cat 2 (memory/equipment)
3. Rare and critical materials + FCX, USAR, UUUU, CCJ, BWXT	Cat 9 Strategic Resources
4. Biotech and AI + REGN, ABCL, ADPT	Cat 10 Biotech, Pandemic & AI Drug Discovery
5. Defense + CACI	Cat 7 US primes; BAE and Rheinmetall to Cat 8
6. Defense robotics and autonomy + RCAT, ONDS	Cat 8 (AVAV, KTOS, ESLT, RCAT, ONDS); TDY, CW, HII, DRS to Cat 7
25-company screen: GOOGL, AMZN, META, APP	Cat 3 Hyperscalers & AI Platforms (+ MSFT added)
25-company screen: VRT, ETN; renewables: GEV, NEE, AMSC	Cat 5 AI Power (+ CEG added)
25-company screen: CRWD, ZS	Cat 6 AI Software & Cyber (+ PLTR, PANW added)
Renewables: NXT, FSLR, ENPH, SHLS, ARRY, FLNC, RUN, ENLT, ELVA, TOYO, CSIQ, SEDG, BLDP, TURB, WAVE, PBK, BRNX	Category 11 Solar & Renewables
25-company screen: NU, SOFI, TBBK, MELI, PDD, CELH, LULU	Category 12 Fintech & Consumer
9 funds: SOXX, XSD, SMH, REMX, EART, BOT, KOID, BOTT, THNQ	Fund group
New in v2: MSFT, PLTR, CEG, PANW, TMO, ABT, GILD, MRNA	Cats 3, 5, 6, 10 (estimated FS; full dossiers in v2.1)

What v2 changes in v1's conclusions. v1 found no company with a validated >60% doubling probability and placed NU (~61%) and APP (~60%) at the top. v2 agrees on the top names but promotes TSM, SK hynix, MU, GOOGL and MSFT, where financial strength and recent results are stronger than the scenario alone implies, and demotes SOFI, ARRY and TBBK, whose fundamentals score lower. v1's caveat stands: a probability, however modelled, is not a guarantee.

Appendix C. Sources

v1 financial data: Stock Analysis standardized statements (S&P; Global Market Intelligence / Fiscal.ai) as cited in the v1 dossiers, reviewed Oct 28, 2026. v2 updates: company releases and SEC filings, accessed Oct 29, 2026.
