# Financial strength and the price paid

**109 investments. 100 company financial reviews. Two new decision factors.**

The summary tables now include Financial Strength (FS, 0-100), a short growth-funding interpretation, and Price-Fundamentals Balance. Every company has a C001-C100 dossier covering its income statement, balance sheet, cash flow, multi-year history and material financial caveats. Renewable summaries now use the same 12 columns as the other investment summaries.

| New parameter | What it answers | What it does not establish |
|---|---|---|
| Financial Strength | Can profits, cash, liquidity and capital support growth without excessive financial strain? | A stock-return forecast, credit rating or guarantee of financial safety. |
| Price-Fundamentals Balance | Do reported earnings and cash broadly support the price, or does it need demanding future assumptions? | A fair-value target, a full DCF or a personalized buy/sell instruction. |

**Financial funding profile.** 36 strong, 26 sound, 18 mixed, 18 weak, 2 fragile. These are rubric results across different business models, not percentiles or credit-risk probabilities.

**Price support at the reviewed ratios.** 7 supported, 28 conditional, 35 demanding, 1 funding-sensitive, 29 not established. “Supported” means passing a limited current earnings/cash screen; it does not remove country, governance, competition or valuation-model risk.

**How to use this update.** Read the two new columns together, then open the matching C-number dossier. High FS plus a demanding price can be a strong business with a substantial valuation hurdle. A low multiple with weak cash funding can be a value trap. The original qualitative success-factor grades, growth flags and three-year scenario outputs remain separate.

**Reading order.** F2-F5 explain methods, F6-F7 locate all 100 companies, then the updated E/S/core research sections provide all 109 investment summaries. The C001-C100 financial dossiers follow those sections, beginning at F8. PDF bookmarks link each company.

**Scope and cutoff.** Standardized statements and valuation ratios were reviewed October 28, 2026; each dossier labels the actual reporting period. Earlier market caps, forward multiples, entry quotes and scenarios retain their original October 27/28 observation times. This update does not silently reprice those forecasts. Results scheduled after the research cutoff are excluded.

# What the financial review covers

**Income and growth.** Up to three completed fiscal years plus the latest available TTM or annual view: revenue, operating profit, net income, EPS, diluted shares and margins. The reported revenue CAGR spans the two intervals between three annual observations; it is historical, not a forward forecast.

**Balance sheet.** Cash/short investments, total debt, net cash or debt, current liquidity, equity and tangible/intangible exposure. Debt generally includes leases in the comparison data. It is not total liabilities. Customer deposits, deferred revenue, pension, project and minority claims need separate interpretation.

**Cash and allocation.** Operating cash, capital investment, free cash, stock compensation, equity financing, repurchases and dividends. Three-year positive-profit/FCF counts test persistence. Cash raised by issuing shares or debt is not operating cash generation.

**Material issuer context.** Issuer releases, annual/interim reports and selected filing notes support company-specific interpretation. These include unusual gains/tax items, acquisitions, advance payments, capital raises and regulatory capital. The review does not independently audit every standardized line, covenant, maturity, contractual commitment or legal contingency.

**Data provenance.** The numerical comparison tables use Stock Analysis standardized statements/ratios, which attribute data to S&P; Global Market Intelligence or Fiscal.ai. Company financial reports are linked separately. The connected Massive plan did not provide the statement dataset; these figures are not described as Massive data. Some issuer documents are hosted by filing mirrors, identified by their linked host.

**Missing and asynchronous data.** N/D means not displayed or not available; a dash is not assumed zero. N/M means a ratio is not economically meaningful. Latest income, balance and cash dates can differ; matched annual periods are used for cash scoring where needed. Short public histories earn fewer persistence points. A latest annual column can repeat the first fiscal-year column.

**Currency and share bases.** All financial tables use the issuer statement currency in millions, except EPS/ratios and shares in millions. Foreign home-market statements are not USD ADR statements. Ratios are taken directly from the cited vendor page, avoiding currency conversion and ADR-share arithmetic. A vendor ratio can still use a different earnings/share denominator or update time.

# Financial Strength: the operating rubric

FS measures current financial funding strength. It is a transparent analyst screen, not an empirically trained model of successful stocks. Weights total 100. A 100 means every displayed criterion earned full points; it does not mean risk-free. Differences below roughly 5-10 points are not decision-grade precision.

| Pillar / maximum | Point rules before disclosed company adjustments |
|---|---|
| Profitability and quality / 25 | Operating margin: ≥25%=15; ≥15%=12; ≥5%=9; >0=5. Add 2 per positive-net-income annual year (max 6), plus 4 if current operating and net profit are positive. Quality caps address material nonoperating/tax effects. |
| Cash generation / 25 | FCF margin: ≥15%=15; ≥5%=12; >0=8. Add 2 per positive-FCF annual year (max 6). OCF/net income (positive NI): ≥1.0=4; ≥0.8=3; ≥0.5=1. Matched annual flows replace mismatched latest periods. Specified quality caps apply. |
| Liquidity / 20 | Current ratio: ≥2=10; ≥1.3=8; ≥1=5; ≥0.75=2. Cash/current liabilities: ≥1=10; ≥0.5=8; ≥0.2=5; ≥0.1=2. For a loss-making cash burner instead: static cash/annual FCF burn runway ≥36 months=20, ≥24=16, ≥12=10, ≥6=5. |
| Leverage and service / 20 | Net cash: 15 debt points. Otherwise net debt/positive EBITDA: ≤1=12; ≤2.5=9; ≤4=5. Operating profit/interest: ≥10=5; ≥5=4; ≥2=2; ≥1=1. Missing interest with net cash receives a disclosed 4/5 fallback. Captive-finance exceptions are separate. |
| Share allocation / 10 | Annual diluted-share two-year CAGR: ≤0=10; ≤2%=8; ≤5%=6; ≤10%=3; >10%=0. Insufficient comparable history=3. Latest SBC/revenue >15% caps this at 2; >10% caps it at 5. Buybacks are not automatically good if they weaken capital. |

**Bands:** 80-100 Strong; 60-79 Sound; 40-59 Mixed; 20-39 Weak; 0-19 Fragile. These describe this funding rubric. They are not investment grades. Regulated utilities, project developers and clinical research can deliberately consume cash; a low self-funding score does not by itself establish insolvency.

**Growth support:** high FS with positive residual cash can fund reinvestment internally; lower FS or negative FCF points to reserves, financing, improved operations or dilution. Growth still requires demand, returns on capital, execution and a sensible price. This score is not converted into any probability of doubling.

# Sector adjustments and cash limits

**Banks (NU, SOFI, TBBK).** Loan origination, deposits and investment cash make industrial FCF/debt ratios misleading. A separately judged bank rubric uses profitability 25, credit quality 25, funding 20, capital 20 and allocation 10. Financial dossiers show component points, regulatory capital and the distinction between subsidiary and parent measures. It is not calibrated to the operating-company scale.

**Explicit nonbank adjustments.** Earnings-quality points are capped for ONDS, ALM, AMSC, GOOGL, AMZN, FSLR, NXT and META because reported gains, tax credits or charges complicate quality. Cash points are capped for SYM, ASML, GEV, MELI, CRWD, ZS, SEDG and ENLT for advances, financial customer funds, compensation or unusual cash. DE and MELI receive disclosed leverage judgments because consolidated debt includes finance/customer balances. BLDP liquidity is capped because June cash predates its acquisition. Each dossier lists the actual point adjustment.

**Free cash flow definition.** Standardized FCF generally equals operating cash less the capital-expenditure outflow; NEE also deducts nuclear-fuel spending (USD583m in the latest TTM). It excludes acquisitions, purchased intangibles not in CapEx and many lease-principal payments; issuer “adjusted FCF” may differ. Positive FCF generated by working-capital release or advance collections is not necessarily repeatable. Preferred, minority and tax-equity claims can reduce cash available to common shareholders.

**Stock compensation.** FCF minus stock-based compensation is shown as a rough economic-charge proxy where periods match. It is not GAAP, an actual cash payment, a repurchase requirement or a fully diluted valuation. Options, warrants, convertibles, mergers and ADR ratios need additional analysis beyond a historical share-count CAGR.

**Runway and debt limits.** Static runway equals disclosed cash/short investments divided by annualized latest negative FCF. It excludes future capital raises, additional commitments, restricted-access cash and scheduled principal payments. It is not a management-guided runway or a solvency forecast. Net debt/EBITDA can be flattering at a cyclical peak and misleading for banks, finance arms or project structures. The debt-current line shown is the available reported component, not a complete maturity ladder.

**Funds.** All nine funds retain N/A for corporate FS and corporate price support. Use portfolio exposures, concentration, fees, liquidity and structure. For a closed-end fund, NAV premium/discount and the valuation of private holdings need separate work; assigning a company balance-sheet score to an ETF would be misleading.

**Evidence limits.** No financial ratio detects every fraud, guarantees recovery of receivables, values every drug pipeline or proves orders become cash. Source-specific errors and reporting lags remain. The earlier forward multiples, green flags and scenario probabilities are not statistically validated by this added financial review.

# Price-Fundamentals Balance: a price check

This categorical indicator asks whether today's reported earnings and cash broadly support the stock's price. It is a limited valuation screen, with current trailing P/E and P/FCF cross-checked against operating profitability and FS. It does not claim to calculate equilibrium, intrinsic value or the probability of a future return. Bands are analyst conventions, not historically optimized thresholds.

| Label | Rule / interpretation |
|---|---|
| Supported | Positive operating/net profit and FCF, FS ≥60, and both reported P/E and P/FCF ≤25x. This is at least a 4% reported earnings/cash yield; it does not require growth to be zero or prove value. |
| Conditional | Mixed support: growth, cash conversion or financing must justify the multiple. Includes many cases with only one meaningful earnings/cash multiple and no multiple above 40x. |
| Demanding | A meaningful P/E or P/FCF exceeds 40x (reported yield below 2.5%). Considerable durable growth may be required; high quality can still earn a demanding price. |
| Funding-sensitive | An otherwise conditional low-multiple case has FS below 40. Cheap-looking accounting earnings do not repair weak internal funding. |
| Not established | Current operating profit or meaningful earnings/FCF support is absent. EV/sales provides scale context only. This is common for clinical, research, early-production and distressed companies. |

**Normalization gates.** A nominal Supported result is reduced to Conditional for commodity/memory cyclicals or material unusual gains, tax-credit reliance, customer advances, stock-compensation/cash-quality issues and selected investment-heavy cases. Utility/project structures carry explicit residual-equity cautions. These gates avoid calling a peak-cycle or accounting-driven multiple a reliable bargain.

**Bank version.** Supported requires FS ≥60, reported P/E ≤20x, P/TBV ≤3x and ROE ≥12%. Otherwise P/E ≤30x is Conditional; above 30x is Demanding; unavailable earnings are Not established. Credit losses, capital and funding can still make a low multiple inappropriate. These thresholds do not substitute for a bank residual-income valuation.

**Read growth with the price.** Dossiers display historical revenue CAGR, operating and FCF margins, cash conversion, leverage and dilution alongside the valuation label. Historical growth is not extrapolated into PEG or fair value. A defensible purchase price would need sector-normalized forecasts, required return, bear/base/bull value and a margin of safety beyond this screen.

# Company lookup | 1-50

**RENEWABLE ENERGY EXTENSION | OCTOBER 28, 2026**

# Solar and renewable energy companies

10 U.S. and 10 non-U.S.-headquartered companies, screened for a Nasdaq listing or S&P 500 membership. The expanded report now contains 109 unique investments: 100 operating companies and 9 funds. All 89 previously researched investments and their summary tables are retained.

## Leading research priorities

Nextpower (NXT) and First Solar (FSLR) lead the U.S. factor ranking. Enlight Renewable Energy (ENLT) leads the non-U.S. cohort and offers direct renewable generation exposure. These three are shaded green as higher-growth research priorities. Their policy, financing and valuation risks remain central to the decision.

| Requested addition | What this update provides |
|---|---|
| U.S. companies | 10 eligible companies spanning modules, trackers, inverters, electrical infrastructure, storage and power ownership |
| Non-U.S. companies | 10 eligible, non-U.S.-headquartered exposures; smaller companies at the bottom are speculative or distressed watchlist entries |
| Summary fields | Ticker, broker access, country/domicile, listing eligibility, market cap, function, investment rationale, risks, factor ranks and three-year scenarios |
| Three-year doubling threshold | No new company has a central illustration above 60%; no new robust qualifier. Green does not mean a greater-than-60% probability. |

Nasdaq is an exchange; the S&P 500 is an index. Eighteen additions qualify through Nasdaq. NextEra and GE Vernova qualify as NYSE-listed S&P 500 members. The screen does not require Nasdaq-100 membership.

Reading guide: E-prefixed pages contain this new 20-company research and summaries. The preceding 25-company screen and original 64-investment report follow unchanged, retaining their October 27 snapshots and page labels. Rankings remain cohort-specific.

# What qualifies, and what the ranking means

The request is interpreted as ten U.S. companies plus ten non-U.S. companies across solar panels and the broader renewable-energy industry. Country grouping follows principal operating headquarters. Legal domicile is shown separately: SolarEdge is Israel-headquartered but Delaware-incorporated; TOYO has a Japan operating headquarters and Cayman incorporation; Eco Wave Power operates from Israel and is Swedish-incorporated.

This is a bounded, purposive research list, not an exhaustive worldwide optimization. The eligible foreign pool is much narrower than the global renewable market. Its bottom ranks should be read as watchlist coverage, not ten equally attractive investment recommendations. Strong renewable technology alone does not establish sound current-share economics.

The common factor score weighs profitability/cash and valuation at 20% each; funded growth and financial resilience at 15% each; competitive position and repeat demand at 10% each; share allocation and execution at 5% each. Each factor receives a judgmental 1-5 grade. Score = sum(grade/5 x weight). Ties share ranks, with gaps; rows within ties sort by ticker. The two geographical lists each contain ten companies.

| Business exposure | How to read it |
|---|---|
| Direct solar / renewable generation | Modules, cells, tracking, inverters, project ownership or wave generation are directly connected to the renewable value chain. |
| Storage and grid enabling | Batteries, controls and grid equipment help integrate renewables but can also serve electricity from fossil or nuclear generation. Storage is not itself an energy source. |
| Diversified power companies | NEE and GEV have substantial gas, nuclear, utility or other operations. Their whole-company profits are not pure renewable earnings. |
| Hydrogen | BLDP is included as a conditional renewable-energy enabler. Fuel-cell electricity is renewable only when the hydrogen supply qualifies as renewable. |
| Green shading | NXT, FSLR and ENLT are qualitative higher-growth research priorities; shading is not a validated probability, price target or instruction to buy. |
| Amber shading | PBK and BRNX are financially distressed watchlist entries. Inclusion makes the narrow-universe limitations visible. |

This extension uses the same historical-factor framework as the retained report. No delisting-inclusive, out-of-sample stock return model or new 50-year individual-stock backtest was performed. The framework does not convert scores into probabilities. EN96, EN100

# Industry growth, policy and shareholder value

EIA reported planned 2026 U.S. utility-scale additions of 43.4 GW solar, 24 GW battery storage and 11.8 GW wind. These were developer plans, not completed installations or guaranteed company sales. Strong installation growth can coexist with weak manufacturer margins, negative working capital or shareholder dilution.

Capacity plans and their status as projections. EN87

U.S. tax-credit eligibility and sourcing rules matter materially. IRS instructions state that covered wind/solar facilities generally must begin construction by July 4, 2026 or be in service before 2028 to qualify for the cited clean electricity production credit, with the specified construction tests and exceptions. Separate prohibited-foreign-entity and material-assistance rules affect 45Y, 48E and 45X eligibility. This report does not assume every project or component qualifies.

The production-credit construction rule is not a universal deadline for all storage or manufacturing incentives. Company-specific qualification requires its own assessment. EN88, EN89

| Key economic test | Why it changes the stock case |
|---|---|
| Credits and policy-adjusted profit | Remove the assumption that tax-supported profits are policy-independent. FSLR and NXT both disclose material credit-related economics. |
| Backlog quality | Distinguish binding purchase orders from awarded-but-unsigned work, project pipelines and framework capacity. Backlog is not cash. |
| Per-share funding | Debt, preferred equity, tax equity, minority interests, warrants and new common shares decide how much growth reaches today's shareholder. |
| Cash after obligations | Check cash after working capital, capex, interest and debt service. Non-GAAP Cash Generation, EBITDA and operating cash are different measures. |
| Project economics | Construction overruns, interconnection, power-price capture, curtailment, equipment reliability and warranties can impair returns even when installed GW rises. |
| Geography and trade | Listing on a U.S. exchange does not remove foreign operating, currency, customs or governance risk. |

General tests are analytical judgments; each company dossier links the operating evidence. Do not use these rows as a personalized portfolio allocation.

# Three-year estimates: conditional illustrations

The event is a split-adjusted terminal share/ADS price at least twice the reviewed entry quote at the last available close on or before October 28, 2029. It is not the chance of briefly touching 2x along the way. A double requires 25.99% annual price appreciation. Cash dividends, reinvestment, taxes, brokerage/ADR fees and FX drift are excluded; this particularly understates total-return comparison for income-oriented utilities.

The original scenario method is retained. Established companies use 25/50/25, cyclical 30/45/25, emerging 35/40/25 and distressed special situations 55/30/15 bear/base/bull weights. Scenario terminal medians are analyst judgments. Profitable cases use a forward-to-forward earnings, P/E and net-share bridge; turnarounds and development cases use explicit post-financing equity medians. No input is selected to force a 60% crossing.

Each scenario has lognormal dispersion s = 0.50 x max(recent annual volatility, stated floor) x sqrt(3). Its 2x tail is weighted into the central illustration. Full-volatility testing changes 0.50 to 1.00. The 27-case range varies all medians by 0.8/1/1.2, volatility multiplier by 0.35/0.50/0.65, and bear-to-bull weights by -10/0/+10 percentage points. Ranges are sensitivities, not confidence intervals. Higher volatility can raise or lower an arbitrary threshold probability.

History comes from split-adjusted daily bars through October 27, 2026. Eighteen companies have 492-500 returns beginning October 28, 2024. PBK has only 101 returns from June 3, 2026; BRNX only 51 from August 14. Prior symbols were not spliced into those short series. Illiquidity, corporate actions and jumps can distort volatility; no historical average return is extrapolated.

Historical inputs and adjustment definitions. EN97, EN98

The half-volatility choice and scenario weights are not empirically calibrated. Lognormal cases omit an explicit atom at zero for bankruptcy; qualitative near-zero scenarios cannot capture all failure paths. There is no backtested, real-world probability guarantee. A robust internal pass would require the central, full-volatility and minimum sensitivity estimates all above 60%; none of these 20 qualifies.

Market quotes and caps are vendor-reported October 28 intraday views, with separate times on each summary row. They are not synchronized. ENLT and BLDP have material cap/share or estimate inconsistencies, disclosed on E-labeled audit pages. Broker labels describe public U.S. pages, not authenticated personal-account permissions. EN99, EN100

# U.S. | top 10 within the reviewed universe

Ordered by the same eight-factor composite. Shared ranks are ties; neither a rank nor green shading establishes a high-probability double. Country follows operating headquarters, with legal domicile shown explicitly.

| Geo rank / score | Company / symbol | Country / domicile | Eligible route | Relevant business | Why it earns this position | Research status / FS / price balance |
|---|---|---|---|---|---|---|
| **#1**<br>91/100 | **Nextpower**<br>NXT | United States<br>Domicile: United States | Nasdaq listed<br>EN01 | Solar trackers / integrated equipment | Strong current operations and a broader installed-customer opportunity support the highest factor alignment in this cohort. | Higher-growth research priority<br>**FS 92/100**<br>Conditional |
| **#2**<br>86/100 | **First Solar**<br>FSLR | United States<br>Domicile: United States | Nasdaq listed<br>EN06 | Solar module manufacturer | A favorable valuation and differentiated solar manufacturing franchise offset substantial policy concentration. | Higher-growth research priority<br>**FS 90/100**<br>Conditional |
| **#3**<br>77/100 | **GE Vernova**<br>GEV | United States<br>Domicile: United States | NYSE listed; S&P 500 member<br>EN12, EN13 | Wind turbines / grid equipment | A strong infrastructure franchise; the reviewed price already requires substantial earnings growth. | Research candidate<br>**FS 69/100**<br>Conditional |
| **#3**<br>77/100 | **NextEra Energy**<br>NEE | United States<br>Domicile: United States | NYSE listed; S&P 500 member<br>EN18, EN17 | Renewable owner / regulated utility | A comparatively durable operating platform, with a slower price-doubling path and meaningful financing risk. | Research candidate<br>**FS 44/100**<br>Conditional |
| **#5**<br>69/100 | **American Superconductor**<br>AMSC | United States<br>Domicile: United States | Nasdaq listed<br>EN21 | Grid controls / wind electronics | A cash-generating grid enabler, with higher volatility and valuation risk than the leading solar cases. | Research candidate<br>**FS 66/100**<br>Demanding |
| **#5**<br>69/100 | **Enphase Energy**<br>ENPH | United States<br>Domicile: United States | Nasdaq listed<br>EN24 | Solar microinverters / home batteries | Substantial recovery optionality, supported by liquidity; the operating downturn prevents a high-confidence label. | Research candidate<br>**FS 88/100**<br>Conditional |
| **#7**<br>68/100 | **Shoals Technologies Group**<br>SHLS | United States<br>Domicile: United States | Nasdaq listed<br>EN28 | Solar electrical balance-of-system | Attractive project-enabling products and growth, tempered by quality costs and declining margins. | Research candidate<br>**FS 54/100**<br>Conditional |
| **#8**<br>65/100 | **Array Technologies**<br>ARRY | United States<br>Domicile: United States | Nasdaq listed<br>EN31 | Solar trackers / foundations | The strongest apparent deep-value recovery case, with financing and margin risks that prevent treating cheapness as certainty. | Research candidate<br>**FS 62/100**<br>Conditional |
| **#9**<br>55/100 | **Fluence Energy**<br>FLNC | United States<br>Domicile: United States | Nasdaq listed<br>EN35 | Grid-scale batteries / software | A substantial storage franchise whose current manufacturing losses make it a turnaround watchlist case. | Speculative watchlist<br>**FS 23/100**<br>Not established |
| **#10**<br>46/100 | **Sunrun**<br>RUN | United States<br>Domicile: United States | Nasdaq listed<br>EN38 | Residential solar / storage owner | A significant operating platform with unusually complex shareholder cash economics and financing risk. | Speculative watchlist<br>**FS 24/100**<br>Funding-sensitive |

# Non-U.S.-headquartered | top 10 within the reviewed universe

Ordered by the same eight-factor composite. Shared ranks are ties; neither a rank nor green shading establishes a high-probability double. Country follows operating headquarters, with legal domicile shown explicitly.

| Geo rank / score | Company / symbol | Country / domicile | Eligible route | Relevant business | Why it earns this position | Research status / FS / price balance |
|---|---|---|---|---|---|---|
| **#1**<br>72/100 | **Enlight Renewable Energy**<br>ENLT | Israel<br>Domicile: Israel | Nasdaq listed<br>EN41 | Solar / wind / storage developer-owner | The strongest direct renewable operating platform in this non-U.S. cohort; valuation and financing need careful underwriting. | Higher-growth research priority<br>**FS 50/100**<br>Demanding |
| **#2**<br>62/100 | **Electrovaya**<br>ELVA | Canada<br>Domicile: Canada | Nasdaq listed<br>EN45 | Industrial / stationary batteries | A commercial battery supplier with real profitability, but renewable storage is still an expansion case. | Research candidate<br>**FS 47/100**<br>Demanding |
| **#3**<br>57/100 | **TOYO**<br>TOYO | Japan (operating HQ)<br>Domicile: Cayman Islands | Nasdaq listed<br>EN49 | Solar cells / U.S. modules | Large operating upside relative to the equity value, with unusually concentrated trade and financing risks. | Speculative watchlist<br>**FS 79/100**<br>Conditional |
| **#4**<br>54/100 | **Canadian Solar**<br>CSIQ | Canada<br>Domicile: Canada | Nasdaq listed<br>EN55 | Solar modules / storage / project ownership | A substantial solar/storage business whose low equity value comes with heavy financing and margin risks. | Research candidate<br>**FS 24/100**<br>Not established |
| **#5**<br>52/100 | **SolarEdge Technologies**<br>SEDG | Israel (operating HQ)<br>Domicile: United States (Delaware) | Nasdaq listed<br>EN59 | Solar inverters / optimizers / batteries | A meaningful global solar technology franchise still requiring a sustained turnaround. | Speculative watchlist<br>**FS 55/100**<br>Not established |
| **#6**<br>50/100 | **Ballard Power Systems**<br>BLDP | Canada<br>Domicile: Canada | Nasdaq listed<br>EN63 | Hydrogen fuel cells / energy service | Commercial fuel-cell exposure with a new service model; still a speculative profitability transition. | Speculative watchlist<br>**FS 35/100**<br>Not established |
| **#7**<br>43/100 | **Turbo Energy**<br>TURB | Spain<br>Domicile: Spain | Nasdaq listed<br>EN68 | Solar / battery storage integration | Commercial revenue is established, but profit quality and trading limitations warrant a speculative watchlist label. | Speculative watchlist<br>**FS 28/100**<br>Not established |
| **#8**<br>35/100 | **Eco Wave Power**<br>WAVE | Israel (operating HQ)<br>Domicile: Sweden | Nasdaq listed<br>EN74 | Wave-energy technology | A relevant renewable technology exposure with very early commercial economics and high failure risk. | Speculative watchlist<br>**FS 41/100**<br>Not established |
| **#9**<br>33/100 | **PowerBank**<br>PBK | Canada<br>Domicile: Canada | Nasdaq listed<br>EN78 | Solar / storage developer-owner | Direct renewable assets are relevant, but this is a distressed watchlist entry rather than a strong investment recommendation. | Distressed watchlist<br>**FS 7/100**<br>Not established |
| **#10**<br>25/100 | **BrenX**<br>BRNX | Israel<br>Domicile: Israel | Nasdaq listed<br>EN83 | Thermal storage / solar assets | A technically relevant but financially fragile final watchlist entry; not a high-conviction investment. | Distressed watchlist<br>**FS 23/100**<br>Not established |

ELVA and BLDP are enabling exposures rather than solar-panel makers. The last four entries are highly speculative or distressed. This narrower universe does not support presenting ten uniformly strong foreign investments.

| **E11 \| Enlight Renewable Energy**<br>ENLT<br>$67.16 | **0.45x / 1.75x / 3.40x**<br>Weights 35% / 40% / 25% emerging | Post-financing equity scenarios: base requires operating asset growth and higher distributable cash after interest, maintenance and minority claims. A volatile vendor forward P/E is not used as the valuation anchor. Bull assumes successful commissioning without excessive dilution. | 2024-10-28 to 2026-10-27<br>500 daily log returns<br>Observed annual sigma 51%<br>Floor 45% / used 51%<br>Own listing; no historical mean extrapolation. | **~37%**<br>Sensitivity 15-60%<br>Full-vol ~37%<br>50% loss ~21%<br>Evidence: very low<br>Robust >60%: **No** |
| **E12 \| Electrovaya**<br>ELVA<br>$5.700 | **0.35x / 1.50x / 3.50x**<br>Weights 35% / 40% / 25% emerging | Analyst assumptions: aggregate normalized earnings +25%/yr; exit forward P/E 25.0x versus reported entry 27.27x; net shares +6.0%/yr. Base price multiple 1.50x. Forward-to-forward valuation convention; not issuer three-year guidance. | 2024-10-28 to 2026-10-27<br>500 daily log returns<br>Observed annual sigma 83%<br>Floor 65% / used 83%<br>Own listing; no historical mean extrapolation. | **~34%**<br>Sensitivity 15-50%<br>Full-vol ~37%<br>50% loss ~27%<br>Evidence: very low<br>Robust >60%: **No** |
| **E13 \| TOYO**<br>TOYO<br>$3.735 | **0.15x / 1.60x / 5.00x**<br>Weights 35% / 40% / 25% emerging | Post-financing equity cases haircut recent peak margins and assume substantial manufacturing funding. The reported 1.53x forward P/E is not capitalized as repeatable earnings; customs, tariff and eligibility outcomes can overwhelm plant growth. | 2024-10-28 to 2026-10-27<br>500 daily log returns<br>Observed annual sigma 97%<br>Floor 85% / used 97%<br>Own listing; no historical mean extrapolation. | **~37%**<br>Sensitivity 20-55%<br>Full-vol ~38%<br>50% loss ~36%<br>Evidence: very low<br>Robust >60%: **No** |
| **E14 \| Canadian Solar**<br>CSIQ<br>$9.390 | **0.25x / 1.30x / 4.00x**<br>Weights 30% / 45% / 25% cyclical | Post-financing equity scenarios separate solar/storage project value from debt, financing liabilities and minority claims. Base requires stronger margins and operating cash, not simply a low public market cap or a large development pipeline. | 2024-10-28 to 2026-10-27<br>500 daily log returns<br>Observed annual sigma 88%<br>Floor 70% / used 88%<br>Own listing; no historical mean extrapolation. | **~33%**<br>Sensitivity 15-50%<br>Full-vol ~37%<br>50% loss ~29%<br>Evidence: low<br>Robust >60%: **No** |
| **E15 \| SolarEdge Technologies**<br>SEDG<br>$28.47 | **0.25x / 1.35x / 3.40x**<br>Weights 30% / 45% / 25% cyclical | Post-dilution recovery equity scenarios require sustainable margins without tariff refunds. The 219.77x vendor forward P/E reflects thin forecast earnings and is not used as a stable anchor. AI power products remain future optionality. | 2024-10-28 to 2026-10-27<br>500 daily log returns<br>Observed annual sigma 106%<br>Floor 85% / used 106%<br>Own listing; no historical mean extrapolation. | **~33%**<br>Sensitivity 15-50%<br>Full-vol ~38%<br>50% loss ~30%<br>Evidence: low<br>Robust >60%: **No** |

Assumptions are prospective judgments, not issuer commitments or a calibrated forecast. The price event excludes cash dividends and FX drift. Short history and distressed financing make PBK/BRNX especially weak probability estimates. The lognormal form does not model every bankruptcy or dilution path.

| **Ballard Power Systems** BLDP | 1/5 | 3/5 | 3/5 | 3/5 | 4/5 | 2/5 | 2/5 | 2/5 | **50/100** #15/20 | M4 > V3 > G3 > S3 > D2 > A2 > X2 > P1 Technology and liquidity history help; losses, adoption and integration reduce conviction. |
| **Turbo Energy** TURB | 2/5 | 2/5 | 3/5 | 2/5 | 2/5 | 2/5 | 2/5 | 2/5 | **43/100** #17/20 | G3 > P2 > V2 > S2 > M2 > D2 > A2 > X2 Growth is visible; margins, resilience and repeat independent demand are less established. |
| **Eco Wave Power** WAVE | 1/5 | 1/5 | 3/5 | 3/5 | 2/5 | 1/5 | 2/5 | 1/5 | **35/100** #18/20 | G3 > S3 > M2 > A2 > P1 > V1 > D1 > X1 Technology optionality exists; profitability, demand repeatability and execution are not yet established. |
| **PowerBank** PBK | 1/5 | 2/5 | 2/5 | 1/5 | 2/5 | 3/5 | 1/5 | 1/5 | **33/100** #19/20 | D3 > V2 > G2 > M2 > P1 > S1 > A1 > X1 Some recurring demand exists; resilience, profitability and allocation are weak. |
| **BrenX** BRNX | 1/5 | 1/5 | 2/5 | 1/5 | 2/5 | 1/5 | 1/5 | 1/5 | **25/100** #20/20 | G2 > M2 > P1 > V1 > S1 > D1 > A1 > X1 Commercial growth is unproven; profitability, resilience and allocation score poorly. |

Within-row factor ordering uses grade first, then framework priority for ties. The 20-company ranks and geographical ranks are not re-rankings of the retained 89 investments. High grades do not establish a high doubling probability; growth financed by new shares can benefit the business more than the existing share.

# Data quality, market caps and buying access

Snapshots use each cited page's reported company market cap and quote. Market cap is not free-float value, enterprise value, a guarantee of takeover value or a proxy for safety. The figures are approximate vendor estimates and can lag corporate actions. No currency conversion is needed for the U.S.-listed quotes; operating results in CAD, EUR and GBP are labeled in company evidence.

## ENLT: do not infer cheapness from inconsistent estimates

Reported cap USD 8.95B differs by more than 4% from the page quote times its reported shares (USD 9.36bn). Retained as vendor reported; not used to set the return model.

Vendor forward P/E changed from 24.51x in the October 27 view to 121.33x in the reviewed October 28 view; this estimate-basis discrepancy was not reconciled. The return model does not use it.

The summary retains the latest reviewed cap of USD 8.95B and 121.33x reported forward P/E. Direct equity scenarios replace a P/E growth bridge. EN43

## BLDP: acquisition shares and cash changed the picture

Reported cap USD 550.96M differs by more than 4% from the page quote times its reported shares (USD 0.47bn). Retained as vendor reported; not used to set the return model.

Vendor shares and its +0.46% YoY change predate or omit the roughly 49.6m acquisition shares. The reported market cap is retained; pre-deal cash and share fields are not used as a current valuation floor.

The acquired business closed August 28. The Q2 cash balance preceded GBP82.5m of cash consideration and the new-share issuance; it is not current cash available for shareholders. EN64, EN66

## Robinhood and the alternative for TURB

Public Robinhood U.S. pages show affirmative trading language for 19 of the 20 additions. TURB is watch-only. Interactive Brokers' public instrument list identifies TURB / Turbo Energy SA; that establishes a listed route to investigate, not authenticated permission to open a position. Account type, country, trading permissions and current restrictions still need checking.

IBKR publishes additional permissions and microcap restrictions. Robinhood availability is time-sensitive and may change after this review. EN73, EN70, EN71, EN95

# Company evidence | E01-E02

## E01 | Nextpower (NXT)

United States | legal domicile: United States
Solar trackers / integrated equipment | Higher-growth research priority

**Current operating evidence.** Fiscal Q1 2027 revenue was $935m and GAAP net income $165m. Backlog exceeded $5.5bn. Results included about $99m of net 45X vendor rebates and tariffs. The next quarterly release is scheduled after the October 28 market close and is excluded.

**Interpretation.** Strong current operations and a broader installed-customer opportunity support the highest factor alignment in this cohort.

**Model context.** ~44% central, ~44% full volatility; sensitivity 20-70%. These are conditional illustrations. No robust >60% result.

EN01, EN02, EN03 | Quote and cap | Broker page

## E02 | First Solar (FSLR)

United States | legal domicile: United States
Solar module manufacturer | Higher-growth research priority

**Current operating evidence.** Q2 2026 sales were $1.06bn, down 4%; diluted EPS was $3.92. Contracted backlog was 45.1 GW. Full-year gross-profit guidance assumes $2.10bn-$2.19bn of Section 45X credits, making policy support economically material.

**Interpretation.** A favorable valuation and differentiated solar manufacturing franchise offset substantial policy concentration.

**Model context.** ~38% central, ~38% full volatility; sensitivity 15-60%. These are conditional illustrations. No robust >60% result.

EN06, EN07, EN08 | Quote and cap | Broker page

# Company evidence | E03-E04

## E03 | GE Vernova (GEV)

United States | legal domicile: United States
Wind turbines / grid equipment | Research candidate

**Current operating evidence.** October 28 Q3 results reported $12.6bn revenue, $1.9bn adjusted EBITDA and $5.4bn free cash flow. Backlog reached $197bn. Gas equipment and services are major demand drivers. A $9bn-equivalent agreement to acquire Trench is expected to close in late 2027.

**Interpretation.** A strong infrastructure franchise; the reviewed price already requires substantial earnings growth.

**Model context.** ~31% central, ~35% full volatility; sensitivity 10-50%. These are conditional illustrations. No robust >60% result.

EN11, EN12, EN13 | Quote and cap | Broker page

## E04 | NextEra Energy (NEE)

United States | legal domicile: United States
Renewable owner / regulated utility | Research candidate

**Current operating evidence.** Q3 2026 adjusted EPS increased 9.7% to $1.24. Resources added 3.7 GW to renewables/storage backlog, reaching 36.7 GW. Standalone adjusted EPS growth outlook is 8%+ through 2032. The pending Dominion combination remains subject to regulatory review.

**Interpretation.** A comparatively durable operating platform, with a slower price-doubling path and meaningful financing risk.

**Model context.** ~13% central, ~20% full volatility; sensitivity 0-35%. These are conditional illustrations. No robust >60% result.

EN16, EN17, EN18 | Quote and cap | Broker page

# Company evidence | E05-E06

## E05 | American Superconductor (AMSC)

United States | legal domicile: United States
Grid controls / wind electronics | Research candidate

**Current operating evidence.** Fiscal Q1 2026 revenue rose 30% to $94.1m, partly through the Comtrafo acquisition. GAAP net income was $9.5m, while non-GAAP net income fell to $7.6m from $11.6m. Operating cash flow was about $16m; cash including restricted cash was $153.1m.

**Interpretation.** A cash-generating grid enabler, with higher volatility and valuation risk than the leading solar cases.

**Model context.** ~32% central, ~37% full volatility; sensitivity 15-50%. These are conditional illustrations. No robust >60% result.

EN21 | Quote and cap | Broker page

## E06 | Enphase Energy (ENPH)

United States | legal domicile: United States
Solar microinverters / home batteries | Research candidate

**Current operating evidence.** Q3 2026 revenue was $293.3m versus $410.4m a year earlier. Non-GAAP EPS was $0.41; GAAP EPS $0.17. U.S. sell-through declined 35% year over year. Operating cash flow was only $0.1m and capex $11.5m; cash and securities were $931.8m.

**Interpretation.** Substantial recovery optionality, supported by liquidity; the operating downturn prevents a high-confidence label.

**Model context.** ~38% central, ~40% full volatility; sensitivity 15-55%. These are conditional illustrations. No robust >60% result.

EN24, EN25 | Quote and cap | Broker page

# Company evidence | E07-E08

## E07 | Shoals Technologies Group (SHLS)

United States | legal domicile: United States
Solar electrical balance-of-system | Research candidate

**Current operating evidence.** Q2 2026 revenue rose 47.4% to $163.4m, but net income fell to $12.1m from $13.9m. Gross margin declined to 30.3% from 37.2%. Backlog plus awarded orders reached $801.4m; awarded orders are not yet signed contracts.

**Interpretation.** Attractive project-enabling products and growth, tempered by quality costs and declining margins.

**Model context.** ~38% central, ~41% full volatility; sensitivity 20-55%. These are conditional illustrations. No robust >60% result.

EN28 | Quote and cap | Broker page

## E08 | Array Technologies (ARRY)

United States | legal domicile: United States
Solar trackers / foundations | Research candidate

**Current operating evidence.** Q2 2026 sales were $342.1m, down from $362.2m. GAAP EPS was $0.05 versus adjusted EPS $0.24. Executed contracts and awarded orders totaled $2.5bn. Full-year adjusted EPS guidance was $0.68-$0.75; acquisitions and financing affect common-share economics.

**Interpretation.** The strongest apparent deep-value recovery case, with financing and margin risks that prevent treating cheapness as certainty.

**Model context.** ~46% central, ~44% full volatility; sensitivity 30-70%. These are conditional illustrations. No robust >60% result.

EN31, EN32 | Quote and cap | Broker page

# Company evidence | E09-E10

## E09 | Fluence Energy (FLNC)

United States | legal domicile: United States
Grid-scale batteries / software | Speculative watchlist

**Current operating evidence.** Fiscal Q3 2026 revenue was $649.8m and net loss $44.3m. GAAP gross margin fell to 5.1%. Backlog reached $6.4bn, but about $400m of deliveries were delayed into fiscal 2027. Total liquidity of $863m included cash of $365m and other facilities.

**Interpretation.** A substantial storage franchise whose current manufacturing losses make it a turnaround watchlist case.

**Model context.** ~37% central, ~39% full volatility; sensitivity 20-55%. These are conditional illustrations. No robust >60% result.

EN35 | Quote and cap | Broker page

## E10 | Sunrun (RUN)

United States | legal domicile: United States
Residential solar / storage owner | Speculative watchlist

**Current operating evidence.** Q2 2026 battery attachment reached 74%, but subscriber additions fell 31%. GAAP operating cash outflow was $186m, while company-defined Cash Generation was positive $23m. Full-year Cash Generation guidance was reduced to $200m-$375m excluding safe-harbor equipment investment.

**Interpretation.** A significant operating platform with unusually complex shareholder cash economics and financing risk.

**Model context.** ~29% central, ~33% full volatility; sensitivity 10-45%. These are conditional illustrations. No robust >60% result.

EN38 | Quote and cap | Broker page

# Company evidence | E11-E12

## E11 | Enlight Renewable Energy (ENLT)

Israel | legal domicile: Israel
Solar / wind / storage developer-owner | Higher-growth research priority

**Current operating evidence.** Q2 2026 total revenues and income rose 55% to $210m. Adjusted EBITDA was $160m, or $142m excluding a Sunlight stake-sale gain; net income was $31m. Reported operating cash flow of $84m excludes interest classified in financing and is not cash available to equity.

**Interpretation.** The strongest direct renewable operating platform in this non-U.S. cohort; valuation and financing need careful underwriting.

**Model context.** ~37% central, ~37% full volatility; sensitivity 15-60%. These are conditional illustrations. No robust >60% result.

**Valuation caution.** Vendor forward P/E changed from 24.51x in the October 27 view to 121.33x in the reviewed October 28 view; this estimate-basis discrepancy was not reconciled. The return model does not use it.

EN41, EN42 | Quote and cap | Broker page

## E12 | Electrovaya (ELVA)

Canada | legal domicile: Canada
Industrial / stationary batteries | Research candidate

**Current operating evidence.** Fiscal Q3 revenue rose about 3% to $17.7m; net income was only $0.3m versus $3.7m adjusted EBITDA. October preliminary fiscal-year normalized sales were about $71m. Stationary-product certification and initial deliveries are targeted for 2027; Amazon warrants can add substantial shares.

**Interpretation.** A commercial battery supplier with real profitability, but renewable storage is still an expansion case.

**Model context.** ~34% central, ~37% full volatility; sensitivity 15-50%. These are conditional illustrations. No robust >60% result.

EN45, EN46 | Quote and cap | Broker page

# Company evidence | E13-E14

## E13 | TOYO (TOYO)

Japan (operating HQ) | legal domicile: Cayman Islands
Solar cells / U.S. modules | Speculative watchlist

**Current operating evidence.** H1 2026 sales were $261m, net income $45.8m and operating cash $61.4m; equity funding raised $52.6m net. September announced $240m of binding module agreements. Management withheld specific H2 financial guidance because of customs and trade uncertainty.

**Interpretation.** Large operating upside relative to the equity value, with unusually concentrated trade and financing risks.

**Model context.** ~37% central, ~38% full volatility; sensitivity 20-55%. These are conditional illustrations. No robust >60% result.

**Valuation caution.** A reported 1.53x forward P/E can be a poor guide when trade outcomes, funding and recent margins are unstable. The scenario model uses direct post-financing equity outcomes.

EN49, EN50, EN51, EN52 | Quote and cap | Broker page

## E14 | Canadian Solar (CSIQ)

Canada | legal domicile: Canada
Solar modules / storage / project ownership | Research candidate

**Current operating evidence.** Q2 2026 revenue was $1.2bn, down 29%, with a $77m shareholder loss and $181m operating cash outflow. Storage shipments rose 73% to 3.7 GWh. Debt including financing liabilities was $7.1bn, of which $2.6bn was non-recourse Recurrent debt.

**Interpretation.** A substantial solar/storage business whose low equity value comes with heavy financing and margin risks.

**Model context.** ~33% central, ~37% full volatility; sensitivity 15-50%. These are conditional illustrations. No robust >60% result.

EN55, EN56, EN08 | Quote and cap | Broker page

# Company evidence | E15-E16

## E15 | SolarEdge Technologies (SEDG)

Israel (operating HQ) | legal domicile: United States (Delaware)
Solar inverters / optimizers / batteries | Speculative watchlist

**Current operating evidence.** Q2 2026 GAAP revenue rose 19.6% to $346.2m. GAAP loss was $30.8m; non-GAAP income $3.6m and free cash flow $3.1m. Gross margin included a $13.3m tariff-related benefit. The SEC lists principal offices in Israel and incorporation in Delaware.

**Interpretation.** A meaningful global solar technology franchise still requiring a sustained turnaround.

**Model context.** ~33% central, ~38% full volatility; sensitivity 15-50%. These are conditional illustrations. No robust >60% result.

EN59, EN60 | Quote and cap | Broker page

## E16 | Ballard Power Systems (BLDP)

Canada | legal domicile: Canada
Hydrogen fuel cells / energy service | Speculative watchlist

**Current operating evidence.** Q2 2026 revenue was $20.6m and adjusted EBITDA a $9.8m loss. GeoPura closed August 28 with upfront consideration including GBP82.5m cash and about 49.6m new shares plus deferred share units; the earlier $502m cash balance is pre-acquisition.

**Interpretation.** Commercial fuel-cell exposure with a new service model; still a speculative profitability transition.

**Model context.** ~28% central, ~32% full volatility; sensitivity 10-45%. These are conditional illustrations. No robust >60% result.

**Valuation caution.** Vendor shares and its +0.46% YoY change predate or omit the roughly 49.6m acquisition shares. The reported market cap is retained; pre-deal cash and share fields are not used as a current valuation floor.

EN63, EN64, EN65 | Quote and cap | Broker page

# Company evidence | E17-E18

## E17 | Turbo Energy (TURB)

Spain | legal domicile: Spain
Solar / battery storage integration | Speculative watchlist

**Current operating evidence.** H1 2026 revenue was EUR15.0m, up 172.7%, but net income only EUR65,647. Related-party revenue was EUR7.19m and gross margin fell to 16.5% from 24.0%. Equity raises contributed EUR3.78m net. Robinhood shows watch-only status.

**Interpretation.** Commercial revenue is established, but profit quality and trading limitations warrant a speculative watchlist label.

**Model context.** ~32% central, ~38% full volatility; sensitivity 15-45%. These are conditional illustrations. No robust >60% result.

492 observed returns; some sessions have no bar. A 1.52 log-return jump is retained. Illiquidity and corporate actions can distort historical volatility.

EN68, EN69, EN70, EN71 | Quote and cap | Broker page

## E18 | Eco Wave Power (WAVE)

Israel (operating HQ) | legal domicile: Sweden
Wave-energy technology | Speculative watchlist

**Current operating evidence.** H1 2026 net loss was $1.67m; June cash and equivalents were $8.15m. A $4m gross ADS offering also issued warrants. A planned 1 MW Portuguese installation is part of a 20 MW concession; the full concession is not operating capacity.

**Interpretation.** A relevant renewable technology exposure with very early commercial economics and high failure risk.

**Model context.** ~26% central, ~30% full volatility; sensitivity 10-40%. These are conditional illustrations. No robust >60% result.

EN74, EN75 | Quote and cap | Broker page

# Company evidence | E19-E20

## E19 | PowerBank (PBK)

Canada | legal domicile: Canada
Solar / storage developer-owner | Distressed watchlist

**Current operating evidence.** Fiscal 2026 revenue was CAD27.4m and net loss CAD24.3m; operating cash outflow CAD12.8m. October 1 brought an additional 180-day Nasdaq minimum-bid compliance period. Small equity value does not remove project debt or financing needs.

**Interpretation.** Direct renewable assets are relevant, but this is a distressed watchlist entry rather than a strong investment recommendation.

**Model context.** ~13% central, ~17% full volatility; sensitivity 0-25%. These are conditional illustrations. No robust >60% result.

**Valuation caution.** A vendor forward P/E of 3.81x is shown for transparency but is not accepted as evidence of sustainable profits after the reported fiscal-year loss.

Only 101 returns under renamed PBK symbol; prior SUUN history was not spliced in. Short sample weakens the model.

EN78, EN79, EN80 | Quote and cap | Broker page

## E20 | BrenX (BRNX)

Israel | legal domicile: Israel
Thermal storage / solar assets | Distressed watchlist

**Current operating evidence.** H1 2026 revenue was zero, operating cash outflow $5.50m and June cash $5.69m. The company reported commissioning at Tempo and bought a 1.2 MWp Hungarian PV facility after period-end. Nasdaq ticker changed to BRNX in August.

**Interpretation.** A technically relevant but financially fragile final watchlist entry; not a high-conviction investment.

**Model context.** ~14% central, ~22% full volatility; sensitivity 0-25%. These are conditional illustrations. No robust >60% result.

Only 51 returns under renamed BRNX symbol; prior BNRG history was not spliced in. Distress, jumps and short sample make the model especially unreliable.

EN83, EN84 | Quote and cap | Broker page

# Important exclusions and existing coverage

Listing and investability were checked before adding companies. Several globally important renewable firms fail the requested route, and transaction situations can cap the upside available to today's public shareholder. The names below explain those screening decisions; they are not added investment rows.

| Company / situation | Why it is outside this new top-ten pair |
|---|---|
| Daqo New Energy (DQ) | Issuer identifies NYSE, not Nasdaq. No S&P; 500 eligibility was established; excluded from the strict listing/index screen. |
| Ellomay (ELLO) | Issuer identifies NYSE American and TASE. NYSE American is not Nasdaq and does not imply S&P; 500 membership. |
| ReNew (RNW) | Still identifies Nasdaq in its October 27 announcement, but a recommended USD7.02/share cash acquisition is expected to privatize it. That is a deal-outcome exposure, not an ordinary three-year public growth case. |
| AES (AES) | A USD15/share cash acquisition has been agreed and shareholders approved it; expected closing is late 2026 or early 2027. Not selected as an uncapped long-term growth case. |
| NYSE-only or overseas leaders | U.S. ADR access, overseas size or clean-energy-index inclusion alone does not satisfy Nasdaq-or-S&P-500; eligibility. |
| Tesla (TSLA) and Eaton (ETN) | Already covered in the retained report. Tesla has solar/storage alongside autos and robotics; Eaton is a diversified electrical enabler. They are not counted again. |

Exchange and transaction evidence. EN91, EN90, EN92, EN93, EN94

## What to monitor before updating the view

Prioritize after-credit cash earnings for FSLR/NXT, cash after interest and project debt for ENLT/NEE, and normalized margins without temporary refunds for ENPH/SEDG. For ARRY/CSIQ/FLNC/RUN, require improving residual cash per share. For microcaps, funding terms and continued listing can dominate technical milestones. Rebuild scenarios when the facts change; do not keep a stale probability.

NXT is scheduled to report after October 28 close; FSLR on October 29. Those unreleased results are excluded. GEV's October 28 morning release is included. Earlier sections retain their original cutoff and assumptions rather than being silently refreshed.

# Sources | solar and renewable extension

EN-prefixed links belong to this extension. Issuer releases and SEC exhibits support operating facts; EIA/IRS support industry and policy context; issuer/index sources support eligibility; Stock Analysis supplies reported quotes/caps; broker pages support public availability. Model assumptions and rankings are analyst judgments, not source-endorsed forecasts.

**DEEP RESEARCH EXTENSION | OCTOBER 27, 2026**

# Searching for a 60%+ three-year doubling case

25 new stocks across 12 sectors. The updated file contains 89 unique investments: the 64 retained investments plus 25 newly assessed companies. The original six themes are covered, together with digital banking, e-commerce, cybersecurity, power infrastructure, AI advertising and consumer turnarounds.

## Finding: a marginal model pass, no robust qualifier

Nu Holdings (NU) is the only new stock whose unrounded central model output exceeds 60%. The calculator gives 60.6%, but the full-volatility version falls to 53.5% and its sensitivity range is 35%-85%. AppLovin (APP) is nearly tied at 59.9%, falling to 53.7% under full volatility. These differences are much smaller than the uncertainty in the assumptions.

Neither company supports a defensible claim of a reliably greater-than-60% real-world likelihood from this evidence. No new candidate passes the robustness rule. Nu and AppLovin are the leading near-threshold research cases, not certified high-probability investments.

| Threshold result | Count / interpretation |
|---|---|
| Central calculator output >60% | 1 \| NU only; a marginal, assumption-dependent crossing |
| Above 60% across the specified stress checks | 0 \| no robust model qualifier |
| Empirically validated >60% real-world probability | 0 \| this research does not establish such probabilities |

Amber marks a marginal calculator crossing only. The eight green growth selections in the retained report keep their original meaning and do not represent 60% doubling probabilities.

Reading guide: the new screen comes first, with complete summary tables, scenario audits, factor grades, dossiers and linked sources. The original 64-investment research follows as Part B, with updated financial fields in its summary tables. Bookmarks and S-prefixed pages separate the two research cohorts.

# How the threshold was tested

The event is a split-adjusted share price at least twice the reviewed entry quote at the last available close on or before October 27, 2029. An interim touch of 2x does not qualify. Cash dividends, taxes and investor trading/ADR fees are excluded; economic projections hold FX drift constant. A price double requires 25.99% compound annual appreciation.

This is a purposive assessment of 25 additional listed companies, not an exhaustive global screen. Candidates were chosen to compare operating growth, valuation, financial capacity and direct or enabling exposure across the requested themes. Stocks were retained in the research table even when they failed the threshold, so the report does not hide negative findings.

The prior model settings are retained: established 25/50/25, cyclical 30/45/25, emerging 35/40/25 and clinical-binary 45/30/25 bear/base/bull weights. Each terminal-price scenario is lognormal around an explicitly stated median. No weights or volatility settings were raised to manufacture a passing stock.

Central dispersion uses 0.50 x annual sigma x sqrt(3), where sigma is the greater of measured recent volatility and an analyst floor. The half-volatility adjustment attempts to limit overlap with business scenarios; it was not statistically estimated. The new full-volatility test uses 1.00 x sigma x sqrt(3). Neither is a calibrated future-volatility forecast.

Robust model qualifier is an internal stress rule: the central output, the full-volatility output and the lowest of the retained 27 sensitivity cases must all exceed 60%. The 27 cases vary all terminal medians by 0.8/1/1.2, dispersion by 0.35/0.50/0.65 and bear/bull weights by 10 percentage points. Passing this rule would still not validate a true probability.

Recent uncertainty inputs are 499 daily log returns per stock, from October 28, 2024 to October 26, 2026. The request extended to October 27, but the feed returned observations through October 26; these actual dates are reported. Historical means are not extrapolated. Aggregates are split-adjusted, not dividend-adjusted. R89, R90

Central estimates are rounded to whole percentages to make the threshold audit readable. The calculator decimals shown for NU/APP describe arithmetic, not statistical precision. Sensitivity ranges round outward to five points and are not confidence intervals.

# What supports a doubling case

| Test | Evidence sought / reason it matters |
|---|---|
| Per-share earnings and cash | Revenue must produce shareholder economics. Distinguish organic growth from acquired revenue and remove conspicuous nonrecurring gains. |
| Entry and exit valuation | A good business can deliver weak returns if the entry multiple is too high. A cheap multiple can also reflect declining or overstated earnings. |
| Funding and dilution | Cash runway, debt service, capex and share issuance decide how much business upside reaches the current share. |
| Repeatable demand and moat | Recurring usage, qualification, customer economics and replacement costs help assess durability. Orders, program ceilings and demonstrations are not interchangeable with paid deliveries. |
| Downside and concentration | Clinical, policy, credit, commodity, customer and FX shocks can dominate normal growth. High potential upside is not the same as a high chance of realizing it. |
| Historical limits | The retained 50-year S&P; 500 exercise doubled in 3 of 48 overlapping three-calendar-year total-return windows. This is context, including dividends, not a base rate calibrated to these individual price forecasts. |

The historical factor framework in Part B informs these checks. No delisting-inclusive stock model, out-of-sample probability calibration or new 50-year stock-by-stock backtest was performed. Long-horizon parameter uncertainty remains material. R88, R91

## Important interpretation details

For profitable companies the base bridge is aggregate normalized earnings growth, an exit forward P/E and a separate net share-count assumption. Direct equity-value scenarios are used for clinical platforms, loss-making or transformed businesses and the valuation-constrained CrowdStrike case. Those scenarios include funding and dilution judgments; they are not full discounted-cash-flow or risk-adjusted pipeline valuations.

Forward P/E comes from the reviewed vendor snapshot and may use a different estimate basis or update time from management guidance. SoFi and The Bancorp show material guidance/vendor gaps; the lower vendor-implied starting earnings are retained rather than treating the difference as certain upside. Bank EV, debt/FCF and generic industrial ROIC are not used as valuation proof.

Quote and market-cap rows are in USD, mostly at October 27 close. TBBK is the reviewed 2:07 p.m. intraday quote. Issuer currencies are named where relevant. Snapshots are not synchronized or independently reconstructed. Public Robinhood U.S. pages support access labels; personal-account and country eligibility were not authenticated. R92

# Results by sector | no forced qualifiers

| Sector | New companies reviewed | Strongest central illustration | Why the >60% claim is not established |
|---|---|---|---|
| Physical AI / robotics | Novanta \| NOVT<br>Ambarella \| AMBA | **AMBA ~30%**<br>Full-vol ~34% | Thin current profits, chip competition, customer programs and stock dilution.<br>No central-model crossing in this sector. |
| Semiconductors | Advanced Micro Devices \| AMD<br>Qualcomm \| QCOM | **AMD ~37%**<br>Full-vol ~38% | 50.4x forward earnings, platform competition, exports and customer concentration.<br>No central-model crossing in this sector. |
| Critical materials | Freeport-McMoRan \| FCX<br>Cameco \| CCJ | **FCX ~34%**<br>Full-vol ~36% | Copper prices, operating disruptions, Indonesia exposure and expansion capital.<br>No central-model crossing in this sector. |
| Biotech / AI | Adaptive Biotechnologies \| ADPT<br>AbCellera Biologics \| ABCL | **ABCL ~30%**<br>Full-vol ~31% | Clinical binary outcomes, a $4.16bn equity valuation and additional development financing.<br>No central-model crossing in this sector. |
| Defense | BWX Technologies \| BWXT<br>CACI International \| CACI | **CACI ~34%**<br>Full-vol ~37% | Acquisition debt, budget timing, working capital and limited organic growth.<br>No central-model crossing in this sector. |
| Defense / robotics | Red Cat Holdings \| RCAT<br>Ondas \| ONDS | **RCAT ~38%**<br>Full-vol ~40% | Procurement timing, low margins, cash use and share issuance; very high volatility.<br>No central-model crossing in this sector. |
| Digital banking / fintech | Nu Holdings \| NU<br>SoFi Technologies \| SOFI<br>The Bancorp \| TBBK | **NU ~61%**<br>Full-vol ~54% | Credit losses, regulation, BRL and other FX exposure, and expansion costs.<br>Only a marginal calculator crossing; stress checks fail. |
| E-commerce / payments | MercadoLibre \| MELI<br>PDD Holdings \| PDD | **PDD ~41%**<br>Full-vol ~40% | China/VIE governance, trade rules, policy changes and cash-access uncertainty.<br>No central-model crossing in this sector. |
| Cybersecurity | CrowdStrike \| CRWD<br>Zscaler \| ZS | **ZS ~30%**<br>Full-vol ~35% | 53.0x forward earnings, dilution, competition and uneven investment requirements.<br>No central-model crossing in this sector. |
| Power / AI infrastructure | Vertiv \| VRT<br>Eaton \| ETN | **VRT ~46%**<br>Full-vol ~45% | Customer capex concentration, cyclicality, working capital and near-term earnings-event risk.<br>No central-model crossing in this sector. |
| AI advertising / software | AppLovin \| APP<br>Meta Platforms \| META | **APP ~60%**<br>Full-vol ~54% | Advertising cyclicality, platform/privacy changes, competition, concentration and valuation-basis risk.<br>No central-model crossing in this sector. |
| Consumer / turnarounds | Celsius Holdings \| CELH<br>lululemon athletica \| LULU | **CELH ~36%**<br>Full-vol ~38% | Brand weakness, promotions, customer/distributor concentration and integration.<br>No central-model crossing in this sector. |

NU and APP are close to the numerical cutoff; their ranking is not a reliable performance distinction. These are unvalidated, conditional model outputs. A screening inclusion does not mean the stock meets the requested high-probability criterion.

Score = sum(grade / 5 x factor weight). Ties share rank, with gaps. Within-row ties follow framework priority. Ranks here compare the 25 new companies only. The retained report ranks its original company/fund cohorts separately; none of these scores proves a 60% doubling likelihood.

# Historical-factor alignment | new research cohort

Same eight grades and weights as Part B: P cash/profitability 20%, V valuation 20%, G funded growth 15%, S resilience 15%, M competitive position 10%, D repeat demand 10%, A share allocation 5%, X execution 5%. Grades are analyst judgments from 1 weak/unproven to 5 exceptional; no return-probability conversion is made.

# Why one percentage point is not an edge

The threshold audit is almost a tie: NU calculates to 60.6% and APP to 59.9%. Both round to roughly 60% at the original report's five-point precision. It would be misleading to treat the 0.7-point difference as an empirically meaningful distinction or to promote either stock into a high-confidence basket.

| Nu scenario change | Central illustration |
|---|---|
| Locked central assumptions | 60.6% |
| Aggregate earnings growth 20%/yr; other inputs unchanged | 49.6% |
| Aggregate earnings growth 25%/yr; other inputs unchanged | 55.5% |
| Aggregate earnings growth 35%/yr; other inputs unchanged | 64.7% |
| No base-case P/E rerating from the entry multiple | 53.0% |
| All terminal values 20% lower | 48.7% |
| Full historical volatility, instead of half | 53.5% |

The current investment case for Nu is profitable customer growth at a relatively low earnings multiple. The competing explanation is that consumer credit, currency and country risks deserve that discount. For AppLovin, high cash profits and a moderate forward P/E are attractive, while advertising-platform and privacy changes can be discontinuous risks. These alternatives belong in the analysis rather than being hidden inside a precise-looking percentage.

NU issuer operating and credit evidence; APP issuer financial evidence. R46, R47, R76

The altered growth rates, P/E and terminal values are sensitivity examples, not new forecasts. A 20% terminal-value haircut is not an exchange-rate prediction. None of these tests estimates every possible failure mode.

# Business cases | N01-N02

## N01 | Novanta (NOVT)

Physical AI / robotics | RH U.S.: Yes | $149.35; cap USD 5.65B

**Current evidence.** Q2 2026 sales were $265.8m, up 10.3%; organic growth was 9.3%. Adjusted EPS was $0.89 and operating cash flow $64.9m. Riverpoint adds medical consumables, so recent acquisition growth is not all robotics demand.

**Why research it.** Qualified motion and sensing components can benefit across robot makers; recurring medical consumables add a different demand stream.

**What must happen.** Sustained organic orders and profitable integration could lift cash earnings.
**What can break it.** 37.4x forward earnings, acquisition leverage and customer capex cycles leave a substantial price hurdle.

**Stop relying on the thesis if:** Repeated weak organic orders, integration costs or poor per-share cash conversion.

**Threshold assessment:** ~24% central; ~31% full-volatility; no robust pass. Factor alignment 67/100, rank 18/25 in the new cohort.

R01, R02, R03 | Valuation snapshot

## N02 | Ambarella (AMBA)

Physical AI / robotics | RH U.S.: Yes | $67.12; cap USD 2.96B

**Current evidence.** Fiscal Q2 2027 sales rose 13.2% to $108.1m. GAAP net loss was $6.7m, aided by a $9m nonrecurring expense credit; non-GAAP net income was $8.2m. Cash and marketable debt securities were $272.3m. Guidance is not a booked design-win revenue stream.

**Why research it.** Edge inference may broaden demand beyond conventional security cameras, with software and silicon designed together.

**What must happen.** Production conversion of newer AI chips and sustained cash profitability.
**What can break it.** Thin current profits, chip competition, customer programs and stock dilution.

**Stop relying on the thesis if:** Design wins fail to convert or revenue growth cannot cover operating costs.

**Threshold assessment:** ~30% central; ~34% full-volatility; no robust pass. Factor alignment 56/100, rank 21/25 in the new cohort.

R06 | Valuation snapshot

# Business cases | N03-N04

## N03 | Advanced Micro Devices (AMD)

Semiconductors | RH U.S.: Yes | $560.26; cap USD 914.61B

**Current evidence.** Q2 2026 revenue was $11.5bn, up 50%. Data Center represented 58% of revenue. GAAP EPS was $1.38 versus non-GAAP EPS of $1.66. Commercial execution and software adoption remain central to accelerator share gains.

**Why research it.** An established alternative in server CPUs and accelerators can capture spending across multiple large customers.

**What must happen.** Customer deployments scale with competitive software economics and profitable chip supply.
**What can break it.** 50.4x forward earnings, platform competition, exports and customer concentration.

**Stop relying on the thesis if:** Accelerator adoption or per-share earnings materially trails the operating-growth case.

**Threshold assessment:** ~37% central; ~38% full-volatility; no robust pass. Factor alignment 73/100, rank 13/25 in the new cohort.

R09 | Valuation snapshot

## N04 | Qualcomm (QCOM)

Semiconductors | RH U.S.: Yes | $184.17; cap USD 196.66B

**Current evidence.** Fiscal Q3 2026 sales were $9.9bn; GAAP and non-GAAP EPS were $1.87 and $2.21. Combined Automotive and IoT revenue grew 28%. The company targets a larger non-handset business, but this is a multiyear outlook.

**Why research it.** Licensing and mature products can fund automotive, IoT and robotics diversification at a lower earnings multiple than many AI peers.

**What must happen.** Non-handset revenue becomes material enough to offset handset and modem exposure.
**What can break it.** Handsets still matter; customer insourcing, competition and licensing economics.

**Stop relying on the thesis if:** Diversification fails to offset lower content or weak handset demand.

**Threshold assessment:** ~34% central; ~38% full-volatility; no robust pass. Factor alignment 78/100, rank 7/25 in the new cohort.

R12, R13 | Valuation snapshot

# Business cases | N05-N06

## N05 | Freeport-McMoRan (FCX)

Critical materials | RH U.S.: Yes | $65.95; cap USD 94.71B

**Current evidence.** Q3 2026 adjusted EPS was $0.88, operating cash flow $2.0bn and capex $1.2bn. Consolidated debt was $9.4bn versus cash of $4.3bn. The stated $1.8bn net-debt measure excludes $3.2bn of processing-facility debt.

**Why research it.** An operating copper producer offers exposure to electrification and infrastructure with existing cash generation.

**What must happen.** Grasberg recovery and copper volumes improve while projects earn acceptable returns.
**What can break it.** Copper prices, operating disruptions, Indonesia exposure and expansion capital.

**Stop relying on the thesis if:** Volumes disappoint or higher commodity prices are offset by costs and capital needs.

**Threshold assessment:** ~34% central; ~36% full-volatility; no robust pass. Factor alignment 72/100, rank 14/25 in the new cohort.

R16 | Valuation snapshot

## N06 | Cameco (CCJ)

Critical materials | RH U.S.: Yes | $82.41; cap USD 35.90B

**Current evidence.** Q2 2026 adjusted EBITDA was CAD391m. At June end, cash was CAD1.1bn and debt CAD1.0bn. Contract timing and a prior Westinghouse comparison affected results; spot uranium prices do not pass instantly into contract earnings.

**Why research it.** Established production, contracting relationships and fuel-cycle capabilities support nuclear-demand exposure.

**What must happen.** Contracted uranium deliveries and fuel-cycle earnings grow with disciplined capital use.
**What can break it.** 53.7x forward earnings, production variability, contract timing and uranium prices.

**Stop relying on the thesis if:** Realized earnings do not catch up with the demanding entry multiple.

**Threshold assessment:** ~31% central; ~34% full-volatility; no robust pass. Factor alignment 66/100, rank 19/25 in the new cohort.

R19 | Valuation snapshot

# Business cases | N07-N08

## N07 | Adaptive Biotechnologies (ADPT)

Biotech / AI | RH U.S.: Yes | $27.66; cap USD 4.41B

**Current evidence.** Q2 sales were $71.6m. MRD contributed 92% of revenue and grew 33%; test volumes rose 43%. The company issued $345m of zero-coupon convertible notes and plans to separate MRD from Immune Medicine.

**Why research it.** Commercial testing gives a tangible demand driver alongside an immune-data platform.

**What must happen.** Testing profitability and clear separation terms create durable per-share value.
**What can break it.** 14.3x trailing sales, reimbursement, financing and changing AI exposure after separation.

**Stop relying on the thesis if:** Test economics weaken or separation transfers value away from current shareholders.

**Threshold assessment:** ~29% central; ~33% full-volatility; no robust pass. Factor alignment 53/100, rank 23/25 in the new cohort.

R22, R23 | Valuation snapshot

## N08 | AbCellera Biologics (ABCL)

Biotech / AI | RH U.S.: Yes | $12.83; cap USD 4.16B

**Current evidence.** Q2 net loss was $55.4m and cash plus marketable securities exceeded $565m. August ABCL635 Phase 2 results met primary endpoints in 92 women in a placebo-controlled study; larger and longer studies remain necessary.

**Why research it.** Partner funding and owned-program upside can share discovery infrastructure and scientific capabilities.

**What must happen.** Further controlled efficacy and safety evidence supports funded late-stage development.
**What can break it.** Clinical binary outcomes, a $4.16bn equity valuation and additional development financing.

**Stop relying on the thesis if:** Confirmatory efficacy, safety or funding fails to support the clinical path.

**Threshold assessment:** ~30% central; ~31% full-volatility; no robust pass. Factor alignment 42/100, rank 25/25 in the new cohort.

R26, R27, R28 | Valuation snapshot

# Business cases | N09-N10

## N09 | BWX Technologies (BWXT)

Defense | RH U.S.: Yes | $134.07; cap USD 12.28B

**Current evidence.** Q2 revenue was $901.6m and adjusted EPS $1.07. Management raised 2026 adjusted EPS guidance to $4.70-$4.80 and free cash flow to $345m-$360m. An October naval fuel award was approximately $189m.

**Why research it.** Difficult qualification and long programs support durable demand in defense and commercial nuclear markets.

**What must happen.** Funded demand converts into capacity utilization and recurring cash earnings.
**What can break it.** 26.9x forward earnings, capacity and acquisition execution, and government scheduling.

**Stop relying on the thesis if:** Program delays or investment costs overwhelm per-share cash improvement.

**Threshold assessment:** ~27% central; ~33% full-volatility; no robust pass. Factor alignment 79/100, rank 4/25 in the new cohort.

R31, R32, R33 | Valuation snapshot

## N10 | CACI International (CACI)

Defense | RH U.S.: Yes | $666.26; cap USD 14.80B

**Current evidence.** Fiscal Q1 2027 sales grew 8.2% to $2.47bn, including 2.1% organic growth. Adjusted EPS was $7.66 and book-to-bill 2.0x. Company-defined free cash flow was $133.5m, down 6.6% year over year.

**Why research it.** Mission specialization and repeat government demand support a cash-earnings case at a moderate forward multiple.

**What must happen.** Funded backlog converts while organic growth and cash conversion improve.
**What can break it.** Acquisition debt, budget timing, working capital and limited organic growth.

**Stop relying on the thesis if:** Debt and working capital absorb the growth in reported earnings.

**Threshold assessment:** ~34% central; ~37% full-volatility; no robust pass. Factor alignment 77/100, rank 10/25 in the new cohort.

R36 | Valuation snapshot

# Business cases | N11-N12

## N11 | Red Cat Holdings (RCAT)

Defense / robotics | RH U.S.: Yes | $4.87; cap USD 743.72M

**Current evidence.** Q2 sales rose 527% to $20.2m, but gross margin was only 16.1%. The company reaffirmed 2026 target revenue of $150m-$180m. The reviewed share count was 41.7% higher year over year.

**Why research it.** A smaller procurement supplier can scale quickly if paid production orders become repeatable.

**What must happen.** Funded deliveries, manufacturing yields and cash gross profit improve together.
**What can break it.** Procurement timing, low margins, cash use and share issuance; very high volatility.

**Stop relying on the thesis if:** Targets remain unconverted while cash burn and dilution continue.

**Threshold assessment:** ~38% central; ~40% full-volatility; no robust pass. Factor alignment 48/100, rank 24/25 in the new cohort.

R39, R40 | Valuation snapshot

## N12 | Ondas (ONDS)

Defense / robotics | RH U.S.: Yes | $6.65; cap USD 3.79B

**Current evidence.** Q2 sales were $83.8m; same-portfolio growth was 85%. Pro forma backlog including Q3 acquisitions was $757m. Reported operating loss was $162.9m. Liquidity of $1.4bn includes restricted cash; shares rose 297% year over year.

**Why research it.** A broader autonomy and counter-drone portfolio has a visible order pipeline and financing capacity.

**What must happen.** Acquired capabilities integrate and funded orders produce operating cash.
**What can break it.** Acquisition accounting, costs, restrictions on cash and exceptionally large dilution.

**Stop relying on the thesis if:** Acquisitions expand reported size without improving value per share.

**Threshold assessment:** ~37% central; ~40% full-volatility; no robust pass. Factor alignment 54/100, rank 22/25 in the new cohort.

R43 | Valuation snapshot

# Business cases | N13-N14

## N13 | Nu Holdings (NU)

Digital banking / fintech | RH U.S.: Yes | $12.40; cap USD 59.90B

**Current evidence.** Q2 2026 revenue was nearly $5.9bn and net income $1.1bn, up 49% on the reported FX-neutral comparison. ROE was 33%. The 90+ day NPL ratio rose to 6.9%; higher-risk unsecured lending contributes to both margins and risk.

**Why research it.** High customer engagement, established profitability and 12.65x forward earnings create the strongest near-threshold valuation-growth combination in this cohort.

**What must happen.** Mexico and Brazil growth sustain risk-adjusted earnings while credit losses remain controlled.
**What can break it.** Credit losses, regulation, BRL and other FX exposure, and expansion costs.

**Stop relying on the thesis if:** Credit deterioration or currency weakness offsets the assumed earnings growth.

**Threshold assessment:** ~61% central; ~54% full-volatility; no robust pass. Factor alignment 85/100, rank 1/25 in the new cohort.

R46, R47 | Valuation snapshot

## N14 | SoFi Technologies (SOFI)

Digital banking / fintech | RH U.S.: Yes | $16.40; cap USD 21.18B

**Current evidence.** Q3 adjusted revenue rose 44% to $1.4bn; GAAP net income was $241m. Management introduced a 2027 EPS outlook of $0.90. The same-day vendor forward P/E implies a lower earnings baseline, so the model conservatively retains the vendor baseline.

**Why research it.** Members, products and fee businesses can build operating leverage if underwriting remains sound.

**What must happen.** Guidance converts into recurring earnings and growth becomes less capital intensive.
**What can break it.** Credit and funding cycles, 12.5% trailing share-count growth and new-guidance uncertainty.

**Stop relying on the thesis if:** Credit costs or dilution prevent operating growth from reaching each share.

**Threshold assessment:** ~50% central; ~45% full-volatility; no robust pass. Factor alignment 74/100, rank 12/25 in the new cohort.

R50 | Valuation snapshot

# Business cases | N15-N16

## N15 | The Bancorp (TBBK)

Digital banking / fintech | RH U.S.: Yes | $50.80; cap USD 2.07B

**Current evidence.** Q2 EPS rose 14.2% to $1.45, but net income rose only about 1.5% to $60.7m. ROE was 34.7%. Management guided 2027 EPS to $8.10-$8.30; the 7.34x vendor forward P/E implies a materially lower earnings baseline.

**Why research it.** A low earnings multiple and buybacks support value per share if credit and partner economics hold.

**What must happen.** Fee growth, a successful earnings delivery and disciplined buybacks reduce the discount.
**What can break it.** Credit, fintech-partner concentration, compliance and a wide guidance/consensus gap.

**Stop relying on the thesis if:** Loan losses or capital needs make buybacks and earnings guidance unsustainable.

**Threshold assessment:** ~45% central; ~43% full-volatility; no robust pass. Factor alignment 79/100, rank 4/25 in the new cohort.

R53, R54 | Valuation snapshot

## N16 | MercadoLibre (MELI)

E-commerce / payments | RH U.S.: Yes | $1,680.51; cap USD 85.20B

**Current evidence.** Q2 sales and financial income rose 50% to $10.2bn, while operating margin was 6.7%. Net income was $466m. Shipping, credit and ecosystem investments support adoption but dilute near-term profitability.

**Why research it.** Commerce, logistics and payments reinforce one another across a large regional market.

**What must happen.** Higher engagement and advertising convert to stronger per-share earnings.
**What can break it.** 40.1x forward earnings, margin investment, credit risk and foreign currencies.

**Stop relying on the thesis if:** Growth remains high while incremental margins and credit returns deteriorate.

**Threshold assessment:** ~40% central; ~41% full-volatility; no robust pass. Factor alignment 79/100, rank 4/25 in the new cohort.

R57 | Valuation snapshot

# Business cases | N17-N18

## N17 | PDD Holdings (PDD)

E-commerce / payments | RH U.S.: Yes | $78.40; cap USD 111.59B

**Current evidence.** Q2 sales rose 8% to RMB112.4bn, but net income attributable to shareholders fell 12%. A 6.84x forward P/E is inexpensive; slower profits, global trade exposure and governance can explain part of that discount.

**Why research it.** A cash-generating marketplace at a low earnings multiple offers rerating potential if economics stabilize.

**What must happen.** Merchant and international spending produce durable profit without escalating subsidy costs.
**What can break it.** China/VIE governance, trade rules, policy changes and cash-access uncertainty.

**Stop relying on the thesis if:** Cheapness persists because normalized earnings keep falling or shareholder access disappoints.

**Threshold assessment:** ~41% central; ~40% full-volatility; no robust pass. Factor alignment 77/100, rank 10/25 in the new cohort.

R60 | Valuation snapshot

## N18 | CrowdStrike (CRWD)

Cybersecurity | RH U.S.: Yes | $268.02; cap USD 275.02B

**Current evidence.** Fiscal Q2 2027 sales rose 26% to $1.47bn and free cash flow was $377m. Net new ARR growth was strong. The very high reviewed valuation, rather than product demand alone, constrains the doubling case.

**Why research it.** Recurring subscriptions and platform adoption support business quality; price discipline is decisive.

**What must happen.** Retention and cross-selling sustain growth while cash value catches up with the share price.
**What can break it.** Extreme valuation, competition, customer liability and stock compensation.

**Stop relying on the thesis if:** Multiple compression exceeds the benefit of recurring cash growth.

**Threshold assessment:** ~14% central; ~21% full-volatility; no robust pass. Factor alignment 70/100, rank 16/25 in the new cohort.

R63 | Valuation snapshot

# Business cases | N19-N20

## N19 | Zscaler (ZS)

Cybersecurity | RH U.S.: Yes | $260.15; cap USD 42.42B

**Current evidence.** Fiscal Q4 2026 sales rose 25% to $898.2m. ARR grew 25%, or 20% excluding Red Canary. Full-year free cash flow was $779.1m, while Q4 free-cash-flow margin fell to 7% because of higher investment.

**Why research it.** Recurring security demand and platform expansion can compound cash generation.

**What must happen.** Organic ARR growth and cash conversion sustain returns on the expanding product platform.
**What can break it.** 53.0x forward earnings, dilution, competition and uneven investment requirements.

**Stop relying on the thesis if:** Reported growth depends increasingly on acquisitions while per-share cash growth slows.

**Threshold assessment:** ~30% central; ~35% full-volatility; no robust pass. Factor alignment 70/100, rank 16/25 in the new cohort.

R66 | Valuation snapshot

## N20 | Vertiv (VRT)

Power / AI infrastructure | RH U.S.: Yes | $208.56; cap USD 80.29B

**Current evidence.** Q2 sales rose 24%, including 18% organic growth. Adjusted EPS rose 60%; adjusted free cash flow was $925m. Q3 results are scheduled for October 28, after this research cutoff, so no Q3 figures are used.

**Why research it.** AI rack power and thermal intensity can increase content as data-center capacity expands.

**What must happen.** Orders convert at sustained margins and capacity additions produce cash returns.
**What can break it.** Customer capex concentration, cyclicality, working capital and near-term earnings-event risk.

**Stop relying on the thesis if:** Data-center orders slow or margins revert before valuation is earned.

**Threshold assessment:** ~46% central; ~45% full-volatility; no robust pass. Factor alignment 81/100, rank 3/25 in the new cohort.

R69, R70 | Valuation snapshot

# Business cases | N21-N22

## N21 | Eaton (ETN)

Power / AI infrastructure | RH U.S.: Yes | $384.20; cap USD 149.22B

**Current evidence.** Q2 sales rose 21%, including 14% organic growth. Free cash flow was $874m. Electrical backlog grew 43%. Full-year adjusted EPS guidance was $13.40-$13.60, with material acquisition and separation activity.

**Why research it.** Qualified electrical equipment and service relationships capture broad infrastructure demand.

**What must happen.** Backlog converts into profitable deliveries while the portfolio transition adds value.
**What can break it.** 25.4x forward earnings, capacity constraints, acquisitions and separation execution.

**Stop relying on the thesis if:** Backlog does not produce acceptable cash returns or portfolio costs dilute earnings.

**Threshold assessment:** ~31% central; ~36% full-volatility; no robust pass. Factor alignment 78/100, rank 7/25 in the new cohort.

R73 | Valuation snapshot

## N22 | AppLovin (APP)

AI advertising / software | RH U.S.: Yes | $262.82; cap USD 87.95B

**Current evidence.** Q2 sales rose 53% to $1.924bn. Continuing-operations net income rose 64% to $1.267bn, while free cash flow was $863.3m. The 14.63x reviewed forward P/E supports a strong growth-versus-price case, with high business and market volatility.

**Why research it.** A profitable advertising engine with strong cash generation can compound if performance and customer demand persist.

**What must happen.** Broader advertiser adoption and durable cash earnings validate AI-driven returns on spending.
**What can break it.** Advertising cyclicality, platform/privacy changes, competition, concentration and valuation-basis risk.

**Stop relying on the thesis if:** Customer returns or cash conversion weaken, or platform restrictions damage demand.

**Threshold assessment:** ~60% central; ~54% full-volatility; no robust pass. Factor alignment 78/100, rank 7/25 in the new cohort.

R76 | Valuation snapshot

# Business cases | N23-N24

## N23 | Meta Platforms (META)

AI advertising / software | RH U.S.: Yes | $620.19; cap USD 1.59T

**Current evidence.** Q2 revenue rose 28% to $60.8bn and net income was $15.8bn. Operating cash flow was $31.86bn but free cash flow only $784m, reflecting heavy infrastructure spending. Reported profitability is not equivalent to freely distributable cash.

**Why research it.** Advertising reach and recommendation systems fund AI development and can improve monetization.

**What must happen.** AI spending generates measurable advertising returns and cash flow improves.
**What can break it.** AI capital intensity, regulation, governance and uncertain returns on new infrastructure.

**Stop relying on the thesis if:** Capital spending stays high while incremental monetization and cash returns disappoint.

**Threshold assessment:** ~44% central; ~43% full-volatility; no robust pass. Factor alignment 82/100, rank 2/25 in the new cohort.

R79 | Valuation snapshot

## N24 | Celsius Holdings (CELH)

Consumer / turnarounds | RH U.S.: Yes | $28.00; cap USD 7.08B

**Current evidence.** Q2 revenue rose 10.6% to $817.9m, but the CELSIUS brand declined 11.7%. Alani Nu and acquired Rockstar added scale. Acquisition and distribution transitions mean headline portfolio growth overstates like-for-like core-brand momentum.

**Why research it.** Distribution reach and a broader brand portfolio create recovery potential if demand improves.

**What must happen.** Core-brand demand stabilizes and integration improves repeatable unit economics.
**What can break it.** Brand weakness, promotions, customer/distributor concentration and integration.

**Stop relying on the thesis if:** Growth depends on acquisitions while the core brand keeps losing momentum.

**Threshold assessment:** ~36% central; ~38% full-volatility; no robust pass. Factor alignment 58/100, rank 20/25 in the new cohort.

R82 | Valuation snapshot

# Business cases | N25-N25

## N25 | lululemon athletica (LULU)

Consumer / turnarounds | RH U.S.: Yes | $104.59; cap USD 11.58B

**Current evidence.** Fiscal Q2 sales fell 4% to $2.4bn. EPS of $2.92 included $0.86 from tariff refunds and interest. The company cut full-year revenue and EPS expectations. A low trailing P/E therefore overstates normalized earnings cheapness.

**Why research it.** Brand value, cash and buybacks provide optionality if demand and products recover.

**What must happen.** Comparable demand stabilizes and normalized earnings stop declining.
**What can break it.** Brand/product execution, consumer demand, tariffs and a falling earnings base.

**Stop relying on the thesis if:** Buybacks and one-off benefits conceal continued deterioration in recurring earnings.

**Threshold assessment:** ~27% central; ~33% full-volatility; no robust pass. Factor alignment 72/100, rank 14/25 in the new cohort.

R85 | Valuation snapshot

# Research priorities and monitoring

NU and APP are the clearest near-threshold cases in this new cohort; both require further underwriting of business risks rather than a claim that their true odds exceed 60%. VRT offers a tangible cash-generating AI infrastructure business; SOFI has stronger near-term growth but more credit, funding and dilution sensitivity. CACI, BWXT and ETN supply durable franchises with lower modeled doubling probabilities at the reviewed prices.

For the original themes, the new screen does not replace earlier research priorities simply because a speculative name has a large bull-case target. RCAT/ONDS rely on production, profitable integration and per-share funding discipline. ADPT/ABCL require reimbursement, separation terms or clinical evidence. Those milestones are different from an established earnings compounder.

| Monitoring question | Decision relevance |
|---|---|
| Earnings and cash revisions | Update the business cases after official releases. Especially check VRT after October 28 and TBBK after October 29; these events are after this cutoff. |
| Price and valuation change | A lower price only helps if normalized future value and financing assumptions survive. Do not treat the algebraic entry reference as a live signal. |
| Credit, leverage and dilution | Track nonperforming loans and funding for banks, share counts for acquisitive platforms and cash runway for development businesses. |
| Evidence that invalidates the thesis | The dossier states a specific failure test for each name. Revise the scenario distribution when it occurs, rather than keeping a stale probability. |

No portfolio weights or trades are proposed. The stocks and sector funds overlap economically; the probabilities are not independent. The original 64-investment report follows as Part B, preserving its earlier quotes, grades, colors, broker labels and uncertainty disclosures.

# Sources | new research extension

R-prefixed links belong to this extension. The retained report keeps its S/V citation system. Issuer releases and filings support operating facts; Stock Analysis supplies reported price, cap and valuation snapshots; Robinhood pages support public U.S. availability. No issuer endorses the modeled likelihood.

# 64 investments. Six strategic themes.

The original 42 ranked companies, 14 earlier additions and eight new U.S. physical-AI/robotics companies. The full report now covers 55 companies and nine funds. Horizon: three to five years, with business cases, costs, valuation and execution risks.

**UPDATED: FINANCIAL STRENGTH + VALUATION BALANCE**

Each summary now adds Financial Strength and Price-Fundamentals Balance, with detailed C001-C100 financial dossiers in the complete report. Conditional 2x illustrations, sensitivity and severe-loss risk remain separate. The P01-P64 appendix explains operating scenarios, valuation assumptions and historical inputs. Buying access, market caps, factor grades and the eight green growth selections are retained.

| Theme | First-ranked business | Second-ranked business | Selection emphasis |
|---|---|---|---|
| Physical AI / robotics | Intuitive Surgical | FANUC | Recurring procedures; proven factory automation |
| Semiconductors | TSMC | NVIDIA | Manufacturing bottleneck; accelerated-compute ecosystem |
| Rare / critical materials | Lynas | Albemarle | Operating supply chains; commodity-cycle discipline |
| Biotech / AI | Regeneron | Schrodinger | Funded research; discovery tools |
| Defense | General Dynamics | RTX | Cash generation; funded demand |
| Defense / robotics | Teledyne | Curtiss-Wright | Diversified sensing; qualified components |

## The strongest starting points

TSMC, NVIDIA, General Dynamics and Regeneron stand out on the combination of competitive position, existing earnings and valuation. For broader thematic coverage, add FANUC, Teledyne and Lynas to the first round of deeper due diligence. These seven names are a research priority list, not a proposed portfolio.

First-ranked business does not mean immediate purchase. Intuitive, several automation suppliers and direct autonomy names carry premium valuations. All rankings and stance labels are analytical judgments.

Public-equity research only. Suitability depends on risk tolerance, existing holdings, liquidity needs and access to foreign markets. No trade has been placed.

Reading guide: start with the paired summary/factor tables. Doubling estimates are subjective model outputs, not statistically calibrated forecasts. RH U.S. means a Robinhood Financial U.S. investing account; access labels were checked October 27, 2026. Buying-access notes explain alternate ADR tickers and foreign-exchange routes.

# Requested additions and corrections

The expanded list contains 55 operating companies and nine funds. Eight new U.S.-headquartered physical-AI/robotics companies supplement the earlier 56 investments. The original theme ranks are retained; additions receive factor scores and peer ranks without automatic promotion into the green growth selection.

| Input / symbol | How it appears in this update |
|---|---|
| NVDA, ISRG, MP | Already included: NVIDIA, Intuitive Surgical and MP Materials. No duplicate rows. |
| LYSDY / Lynas | Added as the OTC ADR alias of existing ASX: LYC. One ADR represents one ordinary share; still one company. |
| Themes humanoid fund / THNQ | Correct Themes ticker: BOTT, on Nasdaq. THNQ is the separate ROBO Global Artificial Intelligence ETF on NYSE Arca. Both are included. |
| VPG / Vishay Precision Group | Added with its correct NYSE listing. |
| SOXX, XSD, SMH | Added as semiconductor ETFs. XSD uses a modified equal-weight approach; weights drift between rebalances. |
| REMX, EART | Added as materials ETFs. EART is the renamed former DMAT fund, effective March 1, 2026. |
| BOT, KOID | Added as different structures: BOT is a closed-end fund; KOID is an ETF. |
| TSLA, FFR, USAR, UUUU | Added as operating-company exposures, with conditional or speculative growth assessments. |
| 8 new U.S. physical-AI names | GOOGL/GOOG, AMZN, EMR, SYK, CGNX, DE, OUST and AUR. All are new companies in this report; share classes are not counted twice. |

Identity sources: S24, S154, S156, S138, S150, S151, S153

## Reading the colors and costs

Green + HIGH marks the eight selected growth candidates from the earlier report. It reflects an analytical view of business opportunity and evidence, not a predicted return. Conditional, thematic, cyclical and speculative labels describe other growth routes; the reasons column states what must go right.

Fund expenses are recurring annual percentages of assets, not valuation multiples or total trading costs. Net fees may rely on temporary waivers. BOT expenses are estimates; its share price can differ materially from NAV. OTC ADR liquidity, fees and foreign-exchange exposure also matter.

# Success factors from five decades of markets

The requested 50-year perspective is 1976-2026. This update synthesizes published studies whose samples overlap much of that period and, in some cases, extend earlier. It does not run a new 50-year backtest of these investments; many did not exist for that long. Success means durable shareholder value and returns after the price paid, not revenue growth alone.

| Priority / weight | Company factor and practical test |
|---|---|
| **1. P \| 20%**<br>Profitability and cash quality | Recurring margins and cash conversion, excluding investment gains, pass-through metal sales and one-off releases.<br>S87, S88, S85 |
| **2. V \| 20%**<br>Valuation discipline | Entry price versus normalized earnings, cash flow or funded project economics; adjust for commodity peaks and binary pipelines.<br>S85, S89 |
| **3. G \| 15%**<br>Productive, funded growth | Commercial growth, self-funding, qualification and incremental returns; do not equate capex, backlog ceilings or trial milestones with earned sales.<br>S91, S92, S85 |
| **4. S \| 15%**<br>Financial resilience | Cash, debt, runway and financing claims; distinguish project financing promises and marketable investments from available cash.<br>S89 |
| **5. M \| 10%**<br>Durable competitive position | Installed base, qualification barriers, switching costs, process know-how, data and intellectual property; measure commercial protection.<br>S87, S89 |
| **6. D \| 10%**<br>Repeatable demand | Recurring use, service revenue, actual funded orders, qualified repeat customers and demand breadth; account for cyclicality.<br>S91, S89 |
| **7. A \| 5%**<br>Capital allocation and per-share value | Dilution, acquisitions, owner economics and productive reinvestment; dividends and buybacks are not automatic positives.<br>S89, S92 |
| **8. X \| 5%**<br>Execution and concentration control | Customer/program dependence, ramp execution, clinical binary risk, export access and geopolitics; tail risks can override the score.<br>S93, S94 |

Weights and their priority order are research-policy choices, not coefficients estimated by the cited studies. P, V, G, S and A draw on profitability, value, investment, safety and payout research. M, D and X are analyst durability/risk checks, not independently proven return premiums. Factors overlap, so the score is not a sum of independent effects.

# How the factor scores and ranks work

Each company receives eight evidence-based grades, from 1 (weak or unproven) to 5 (exceptionally strong). A 1 can reflect an early business or insufficient commercial evidence, rather than proof that the company cannot succeed. The rubric favors demonstrated economics and can rank early biotech or robotics ventures below their possible upside.

| Code | 5 \| strongest evidence | 3 \| mixed evidence | 1 \| weak / unproven |
|---|---|---|---|
| P | strong recurring economics and cash evidence | profitable but cyclical or cash-conversion gaps | operating profits/cash generation absent or unproven. |
| V | compelling established earnings anchor | reasonable but demanding or cycle-dependent | extreme price assumptions or no reliable pro forma anchor. |
| G | demonstrated commercial growth with financing capacity | credible but cyclical or ramp-dependent | largely unfunded or unvalidated future growth. |
| S | strong funding buffer | manageable debt or finite runway | major unresolved financing or transaction risk. |
| M | unusually strong established barriers | useful differentiation with competition | durable advantage not demonstrated. |
| D | strong repeat-use or service evidence | cyclical or limited recurring revenue | demand is mainly pre-commercial. |
| A | unusually strong demonstrated per-share discipline | mixed or limited reviewed evidence | severe dilution or unproven ownership economics. |
| X | broad demand and consistent execution | material but manageable operating exposures | severe concentration, binary or transaction dependence. |

## Transparent arithmetic and tie rules

Score = sum of (factor grade / 5) x factor weight, giving 20-100 points. Example: Intuitive Surgical scores 20 + 12 + 15 + 15 + 10 + 10 + 4 + 4 = 90. Scores are rounded to whole points and are not expected returns, success probabilities, target prices or statistical forecasts.

Within each row, factors rank by grade, with ties ordered by framework priority. All eight company factors, or all six fund factors, are shown in the companion table. Overall ranks now compare 55 companies separately from nine funds. Adding eight names changes peer rank, while earlier factor grades are retained. Equal scores share rank; subsequent numbers skip. Differences below five points are broadly similar, not precise superiority.

Higher / medium / lower evidence labels describe disclosure and interpretation limits in the reviewed material, not confidence in future returns. No uniform ten-year ROIC series, accrual model, beta, live liquidity test or independent forensic audit was computed. A one-grade change to a 20%-weight factor moves the total four points.

Green HIGH marks the earlier growth selection, a different judgment from factor alignment. It does not mean the highest factor score. Original theme ranks are retained; the added factor rank answers a separate question. Tail risks, including Taiwan disruption, clinical failure or transaction failure, can overwhelm a strong composite.

# What the historical evidence actually supports

| Primary research / scope | Finding and implication |
|---|---|
| Fama-French model; author data July 1963-August 2026 | Value, profitability and investment are established dimensions of portfolio-return research. These are portfolio relationships, not a guarantee for any company. S85, S86 |
| Novy-Marx, gross profitability; NBER 2010 / JFE 2013 | Gross profitability helps distinguish business quality from cheapness. This report uses current operating and cash evidence; it does not reproduce the paper's factor portfolios. S87 |
| Sloan, 1996 accounting research | Earnings persistence differs between cash-flow and accrual components. Remove obvious noncash gains and test conversion; no full accrual backtest was run here. S88 |
| Quality Minus Junk; US 1956-2012, global 1986-2012; updated datasets | Profitability, growth, safety and payout form a useful quality framework. Our 1-5 assessments differ from the paper's standardized metrics and long-short strategy. S89, S90 |
| Chan, Karceski and Lakonishok, 2001 / 2003 | Exceptional long-run growth is difficult to identify in advance and forecasts can be optimistic. Avoid valuing a stock on uninterrupted high growth. S91 |
| Titman, Wei and Xie, 2003 | Aggressive capital investment can precede weak adjusted stock returns. Evaluate investment returns and per-share economics, not expansion spending alone. S92 |
| Bessembinder, US through 2016; global 1990-2020 | A small minority of stocks explains net wealth creation: about 4% in the US study and 2.4% globally. Diversification matters; inspecting famous surviving winners alone creates selection bias. S93, S94 |
| Bessembinder, US return histories 1925-2023 | Long holding periods contribute materially to extreme cumulative outcomes. A historical winner table describes outcomes; it does not identify tomorrow's winners. S95 |

Samples, methods and definitions differ; the research does not establish one universal ranking of success factors across all sectors or all five decades. This is a qualitative application to the report's October 27, 2026 evidence and valuation snapshots, not a claim of causal proof or out-of-sample validation.

# The nine funds use a separate rubric

An ETF or closed-end fund has fees, a portfolio, governance and trading mechanics. Treating its expense ratio as corporate valuation, or assigning it the earnings of a single constituent, would distort the comparison. These fund grades assess structure and disclosed exposure; no weighted holdings-level factor portfolio was calculated.

| Priority / weight | Fund factor and test |
|---|---|
| **1. C \| 25%**<br>Cost discipline | Recurring fund expense; net waivers and CEF estimates are explicitly identified. |
| **2. B \| 20%**<br>Diversification | Issuer and country breadth plus concentration; all nine remain narrow themes. |
| **3. T \| 20%**<br>Disclosure and price discovery | Published holdings, observable underlying prices and NAV reliability; actual bid-ask spreads are not measured. |
| **4. E \| 15%**<br>Economic exposure fit | How directly the disclosed mandate serves the stated theme, not whether the theme will outperform. |
| **5. Q \| 10%**<br>Commercial maturity | Qualitative maturity of targeted businesses. No weighted portfolio profitability or valuation is claimed. |
| **6. R \| 10%**<br>Mandate discipline | Transparent index rules or active-manager constraints, governance and strategy changes. |

## Scoring anchors and scope

Cost C: 5 at 0.20% or less; 4 above 0.20%-0.40%; 3 above 0.40%-0.65%; 2 above 0.65%-1.00%; 1 above 1.00%. These cutoffs are analyst choices. Net waivers can expire and BOT costs are estimates. A cheap fund can still own expensive or risky assets.

Thematic baskets are capped at 3/5 on breadth B because they retain sector risk; concentrated listed baskets can score 2 and private portfolios 1. T evaluates disclosure and price discovery, not a measured bid-ask spread. E grades fit to each fund's own stated theme. Q grades commercial maturity qualitatively. R grades mandate discipline; recent name/index changes and active discretion warrant review.

SEC guidance explains the compounding drag of recurring fees. SPIVA persistence research cautions against selecting funds simply because of recent winners. Neither source validates this particular score or predicts which of these nine funds will outperform. S96, S97

The leading funds in this rubric are still concentrated sector tools, not broad-market core portfolios. Company and fund scores use different definitions and are ranked separately.

# Investment summary | 1. Physical AI and robotics

**GREEN ROW + HIGH = selected growth candidate.** Horizon: 3-5 years. Growth views are judgments, not guaranteed stock returns.

Blue factor cells = stronger evidence; amber = limited/unproven. Order shorthand: 1.C5 means the first-ranked factor is C, graded 5/5. Green HIGH flags are separate. Overall ties share rank; company and fund scores are not comparable.

# Three-year doubling: what is estimated

The event is a split-adjusted share price at least 2.00 times the entry price at the last available close on or before October 27, 2029. The entry is the price represented by the cited October 27, 2026 valuation snapshot; those quotes and financial estimates are not synchronized. These are conditional research estimates, not executable entry prices or promised price targets.

Doubling requires 25.99% compound annual price growth. A business growing earnings at 20% a year reaches only 1.73x in three years if its P/E and share count are unchanged. If the P/E falls 20%, the result is about 1.38x. Revenue growth, business quality, the green HIGH flag and a probability of doubling are therefore separate measures.

| Included in the model | Definition / limitation |
|---|---|
| Terminal price, not an interim peak | A stock that touches 2x and later falls below it does not satisfy this event. First-touch probabilities would be higher and are not calculated. |
| Price appreciation | Cash dividends, dividend reinvestment, taxes and investor trading/ADR charges are excluded. Fund operating costs are reflected in fund scenarios. A total-return investment can do better than its price-only result. |
| Foreign listings and share classes | Company economics are assessed with FX held constant. USD ADR history is identified when used to inform uncertainty for a foreign home listing. Actual USD and local-currency doubling outcomes can differ. GOOGL/GOOG remain one company. |
| Subjective scenario model | No dataset here establishes the true probability for any one security. Outputs depend on analyst assumptions about bear/base/bull outcomes and weights. All model-evidence labels are low or very low. |
| No portfolio probability | The 64 outcomes are correlated. These percentages must not be added, averaged into a portfolio success rate, or treated as independent bets. |

Return-definition and projection limits are consistent with the SEC performance-claims guidance. S116

# Historical evidence and its limits

Using NYU/Damodaran annual S&P 500 total returns for 1976-2025, 3 of 48 overlapping three-calendar-year windows doubled: 6.25%. They were 1995-1997, 1996-1998 and 1997-1999. This is a broad-index historical frequency including dividends, not an individual-stock price-only probability and not a calibration of this model.

Calculation: multiply (1 + annual return) for each consecutive three-year window and count products >= 2.00. The 48 windows share observations and are not 48 independent experiments. The source table was updated January 5, 2026; the calculation uses the 50 complete years through 2025. S110, S114

For individual uncertainty, the connected price feed supplied approximately two recent years of split-adjusted daily closing prices, generally October 28, 2024-October 26, 2026. Older history was outside the connected plan. Annual realized volatility is sample standard deviation of daily log returns times the square root of 252. Historical return means are not extrapolated into the forecast.

Recent price data: Massive aggregate bars, adjusted=true. Bars are split-adjusted and exclude dividend adjustment. No stock-level three-year historical doubling frequency is claimed because the available own-security histories do not span that horizon. NYU is a separate source for the long-run benchmark. S111, S112

Short-listed histories, business transformations and mandate changes require explicit proxies. SK hynix uses Micron volatility because its U.S. ADR is new; Insilico uses XBI; FFR and BOT use BOTZ; KOID/BOTT use BOTZ; EART uses REMX because its mandate changed. Proxies inform dispersion only. They do not become the company's own performance record or imply equivalent holdings.

USAR excludes its earlier cash-shell period; Generate excludes pre-IPO dates. Foreign OTC/ADR series may be less liquid and embed FX. Minimum volatility assumptions prevent a quiet or stale recent sample from implying unrealistic certainty. Every scenario record states the input ticker, dates, observations, measured volatility and floor.

Listing-history checks: USAR began trading March 14, 2025; GENB began February 27, 2026. S118, S117

Long-horizon uncertainty can remain large even with extensive history. The historical success-factor research elsewhere in the report informs growth moderation, cash discipline, valuation and dilution checks; it does not validate these probabilities. S113, S91, S93

# The probability model: fully specified

Each investment has three terminal price medians, expressed as multiples of its entry price: bear, base and bull. Each scenario has a lognormal distribution around its median. The scenario weights below are policy judgments based on business maturity and cyclicality, not empirically estimated frequencies. The base median is not the mean or median of the combined distribution.

| Scenario class | Bear / base / bull weights | Application |
|---|---|---|
| Established | 25% / 50% / 25% | Profitable, established franchises |
| Cyclical | 30% / 45% / 25% | Industrial, equipment, commodity or program-cycle exposure |
| Emerging | 35% / 40% / 25% | Scaling, expensive or not yet sustainably cash-generative |
| Clinical binary | 45% / 30% / 25% | Clinical platform outcomes and financing dominate |
| Transaction special situation | 55% / 30% / 15% | FFR: pending restructuring and extreme dilution |
| Thematic ETF | 25% / 50% / 25% | Listed equity baskets; still concentrated by sector |
| Private-asset CEF | 40% / 35% / 25% | BOT: private marks, costs and NAV premium uncertainty |

## Arithmetic

Let m be a scenario's terminal price median and w its weight. Annual sigma is the larger of measured recent volatility and the row's analyst floor. Set s = 0.50 x sigma x sqrt(3). Then probability of doubling = sum of w x [1 - Phi((ln(2) - ln(m)) / s)]. Phi is the standard-normal cumulative distribution. Severe-loss probability uses the same distributions below 0.50x.

The one-half volatility multiplier is an analyst overlap adjustment: scenario medians already include business and valuation uncertainty, so adding full realized volatility could count part of that uncertainty twice. This adjustment is not statistically estimated. Its sensitivity is tested; it is not a claim that future volatility will halve.

The deterministic formula uses no random simulation seed. Central percentages round to the nearest 5 points. Values below 5% or above 95% use <5% or >95%; they never assert impossible or certain outcomes. Full unrounded results are retained in the calculation record.

# Assumptions, sensitivity and interpretation

For profitable companies, base-case checks connect aggregate normalized earnings growth, an exit P/E and net share-count change. Approximate price multiple = (1 + earnings growth)^3 x (exit P/E / entry P/E) / (1 + net dilution)^3. Forward earnings are compared with an equivalent forward basis at the horizon. Rounded scenario medians express a wider operating judgment rather than precise price targets.

For cash-burning businesses, project developers and clinical platforms, direct post-financing equity-value scenarios are used. They account qualitatively for cash, debt, capex, milestones and dilution. They are not a complete discounted cash-flow or asset-by-asset risk-adjusted NAV model. EV/sales or EV/EBITDA is never mechanically substituted for share-price appreciation. Contingent licensing headlines are not booked as assured revenue.

For ETFs, scenarios are basket price outcomes after the stated operating-cost assumptions. No holdings-level earnings forecast or portfolio simulation was fitted. For BOT, a synchronized market-price/NAV premium was not verified; its estimate is especially fragile and uses wide assumptions. Future fee-waiver expiry is allowed for KOID and THNQ.

## What the range means

Each range spans 27 combinations: terminal medians multiplied by 0.80, 1.00 or 1.20; residual volatility multiplier 0.35, 0.50 or 0.65; and a 10-percentage-point shift toward bear or bull, or unchanged weights. Base weight stays fixed. Bounds round outward to five points. This is a sensitivity envelope under chosen assumptions, not a 90% or 95% confidence interval, and not every plausible outcome lies inside it.

No out-of-sample calibration, option-implied forecast, delisting-inclusive stock base-rate model or full fifty-year backtest of these 64 investments was performed. Parameter uncertainty, regime shifts, market closures, total loss, FX shocks and changing business models can defeat the model. Small differences between estimates are not investment superiority.

Clinical context: BIO/Informa/QLS found 7.9% overall approval likelihood from Phase I across 2011-2020, varying by indication and modality. That is neither a three-year endpoint nor a stock-return probability. It motivates substantial failure scenarios, not a mechanical 7.9% assignment to any named company. S115

Higher speculative upside can accompany higher severe-loss risk. Read the operating requirements and downside beside the percentage; retain the earlier factor scores as a separate quality and price discipline check.

# Doubling assumptions | Physical AI and robotics

P01-P64 link the estimates to the summary rows. All scenario medians, weights, growth rates, exit valuations and volatility floors are analyst assumptions. Issuer sources support current facts; they do not endorse the forecast. Price multiples are after assumed share dilution and, for funds, operating expenses.

| Investment / model ID | Terminal price medians / weights | Base business and valuation assumptions | What must go right / main limiter | Historical input / uncertainty | Conditional model outputs |
|---|---|---|---|---|---|
| **P01 \| Intuitive Surgical**<br>ISRG<br>S01<br>Entry valuation | **Bear / base / bull**<br>0.75x / 1.65x / 2.65x<br>**Weights**<br>25% / 50% / 25%<br>established | Base: aggregate earnings grow 18% a year; exit P/E 37x versus 37.3x; shares +0.5% a year. Procedures and recurring instruments underpin the bridge. | **Driver:** da Vinci 5 utilization and procedure growth sustain earnings near 20%.<br>**Limiter:** Premium entry valuation; hospital budgets and procedure competition. | **ISRG \| Own listing**<br>2024-10-28 to 2026-10-26<br>499 daily log returns<br>Observed sigma 35%/yr<br>Floor 30% / used 35%<br>Terminal residual s 0.30 | **~35%**<br>Range 10-60%<br>50% loss: <5%<br>Model evidence: low<br>P01 \| model estimate<br>Loss sensitivity 0-15% |

# Doubling assumptions | Biotech and AI

P01-P64 link the estimates to the summary rows. All scenario medians, weights, growth rates, exit valuations and volatility floors are analyst assumptions. Issuer sources support current facts; they do not endorse the forecast. Price multiples are after assumed share dilution and, for funds, operating expenses.

| Investment / model ID | Terminal price medians / weights | Base business and valuation assumptions | What must go right / main limiter | Historical input / uncertainty | Conditional model outputs |
|---|---|---|---|---|---|
| **P22 \| Regeneron Pharmaceuticals**<br>REGN<br>S33, S34<br>Entry valuation | **Bear / base / bull**<br>0.65x / 1.55x / 2.55x<br>**Weights**<br>25% / 50% / 25%<br>established | Base: earnings +10% a year; exit P/E 14x versus 12.3x; shares -1% a year. Existing drugs and pipeline support modest growth and some rerating. | **Driver:** Core franchises grow while pipeline value supports a less discounted multiple.<br>**Limiter:** Drug competition, reimbursement and clinical setbacks. | **REGN \| Own listing**<br>2024-10-28 to 2026-10-26<br>499 daily log returns<br>Observed sigma 37%/yr<br>Floor 30% / used 37%<br>Terminal residual s 0.32 | **~30%**<br>Range 5-55%<br>50% loss: ~5%<br>Model evidence: low<br>P22 \| model estimate<br>Loss sensitivity 0-20% |
| **P23 \| Schrodinger**<br>SDGR<br>S35, S36<br>Entry valuation | **Bear / base / bull**<br>0.30x / 1.40x / 3.25x<br>**Weights**<br>35% / 40% / 25%<br>emerging | Equity-value scenarios combine recurring software economics, licensing transition, partner value, cash burn and dilution. Base 1.40x needs growth beyond a quarterly revenue comparison. | **Driver:** Contract growth converts to recurring cash revenue and pipeline validation.<br>**Limiter:** Cash burn, software transition and uncertain drug value. | **SDGR \| Own listing**<br>2024-10-28 to 2026-10-26<br>499 daily log returns<br>Observed sigma 63%/yr<br>Floor 60% / used 63%<br>Terminal residual s 0.55 | **~30%**<br>Range 10-50%<br>50% loss: ~30%<br>Model evidence: low<br>P23 \| model estimate<br>Loss sensitivity 15-45% |
| **P24 \| Insilico Medicine**<br>3696<br>S37, S38<br>Entry valuation | **Bear / base / bull**<br>0.20x / 1.50x / 4.00x<br>**Weights**<br>45% / 30% / 25%<br>binary | Equity-value scenarios incorporate rentosertib trial outcomes, milestone timing, cash and additional financing. Base 1.50x assumes progress without assigning every contingent milestone full value. | **Driver:** Controlled trial results and partner transactions validate clinical utility.<br>**Limiter:** Clinical failure, lumpy licensing and a short listed history. | **XBI \| SECTOR PROXY**<br>2024-10-28 to 2026-10-26<br>499 daily log returns<br>Observed sigma 28%/yr<br>Floor 70% / used 70%<br>Terminal residual s 0.61 | **~30%**<br>Range 15-50%<br>50% loss: ~45%<br>Model evidence: very low<br>P24 \| model estimate<br>Loss sensitivity 30-60% |
| **P25 \| Tempus AI**<br>TEM<br>S39, S40<br>Entry valuation | **Bear / base / bull**<br>0.35x / 1.70x / 3.60x<br>**Weights**<br>35% / 40% / 25%<br>emerging | Equity-value scenarios balance testing/Insights growth, reimbursement, cash conversion and dilution against 8.9x EV/sales. Base 1.70x assumes margin progress, not just higher tests. | **Driver:** Testing/data growth combines with sustained operating leverage.<br>**Limiter:** Sales valuation, reimbursement, integration and stock compensation. | **TEM \| Own listing**<br>2024-10-28 to 2026-10-26<br>499 daily log returns<br>Observed sigma 92%/yr<br>Floor 60% / used 92%<br>Terminal residual s 0.79 | **~35%**<br>Range 20-55%<br>50% loss: ~25%<br>Model evidence: low<br>P25 \| model estimate<br>Loss sensitivity 15-40% |
| **P26 \| Recursion Pharmaceuticals**<br>RXRX<br>S42, S43<br>Entry valuation | **Bear / base / bull**<br>0.15x / 1.35x / 4.25x<br>**Weights**<br>45% / 30% / 25%<br>binary | Equity-value scenarios use clinical outcomes and partner validation, cash runway into 2029 and future dilution. Base 1.35x is a platform scenario, not a validated clinical success probability. | **Driver:** Meaningful efficacy data and partnered milestones improve pipeline value.<br>**Limiter:** Trial outcomes, financing and weak current recurring economics. | **RXRX \| Own listing**<br>2024-10-28 to 2026-10-26<br>499 daily log returns<br>Observed sigma 85%/yr<br>Floor 75% / used 85%<br>Terminal residual s 0.74 | **~30%**<br>Range 15-45%<br>50% loss: ~45%<br>Model evidence: very low<br>P26 \| model estimate<br>Loss sensitivity 30-60% |
| **P27 \| Generate Biomedicines**<br>GENB<br>S44, S45<br>Entry valuation | **Bear / base / bull**<br>0.15x / 1.30x / 4.00x<br>**Weights**<br>45% / 30% / 25%<br>binary | Equity-value scenarios reflect Phase III differentiation, partnership receipts and financing before the projected H1 2028 runway endpoint. Base 1.30x is after assumed dilution. | **Driver:** Late-stage evidence demonstrates differentiated protein therapeutics.<br>**Limiter:** Binary trial outcomes, short history and funding before the horizon. | **GENB \| Own listing**<br>2026-02-27 to 2026-10-26<br>166 daily log returns<br>Observed sigma 86%/yr<br>Floor 75% / used 86%<br>Terminal residual s 0.74 | **~30%**<br>Range 15-45%<br>50% loss: ~45%<br>Model evidence: very low<br>P27 \| model estimate<br>Loss sensitivity 30-60% |
| **P28 \| Absci**<br>ABSI<br>S47, S48<br>Entry valuation | **Bear / base / bull**<br>0.12x / 1.25x / 4.25x<br>**Weights**<br>45% / 30% / 25%<br>binary | Equity-value scenarios require efficacy beyond early tolerability and allow financing before projected H2 2028 runway expiry. Base 1.25x is after assumed dilution. | **Driver:** ABS-201 efficacy and credible partnerships validate the platform.<br>**Limiter:** Early clinical evidence, cash burn and substantial financing uncertainty. | **ABSI \| Own listing**<br>2024-10-28 to 2026-10-26<br>499 daily log returns<br>Observed sigma 100%/yr<br>Floor 80% / used 100%<br>Terminal residual s 0.86 | **~30%**<br>Range 15-45%<br>50% loss: ~45%<br>Model evidence: very low<br>P28 \| model estimate<br>Loss sensitivity 35-60% |

# How to read the rankings

The original global shortlist comprises 42 companies, seven per theme. This edition includes 13 additional companies and nine funds, giving 64 investments in total. The eight newest additions are U.S.-headquartered listed companies with direct or enabling physical-AI exposure. Selection weighs commercial relevance, financial capacity and complementary roles; it is not an exhaustive global screen or a claim of maximum future returns.

| Major factor | What matters for the investment |
|---|---|
| Actual exposure | Revenue from robots, chips, materials or drug discovery; direct products versus enabling components or a small optional business. |
| Competitive position | Qualification barriers, installed base, intellectual property, proprietary data, manufacturing yields and switching costs. |
| Growth and catalysts | Order conversion, product adoption, capacity ramp, trials and partner payments, with dates checked for later revisions. |
| Financial resilience | Operating cash flow, capital spending, debt, cash runway, stock compensation, ownership claims and dilution. |
| Valuation | Forward P/E for established earners; normalized cycle economics for commodities; EV/sales or risk-adjusted pipeline value for loss-makers. |
| Downside and thesis failure | A concrete operational, commercial or financing development that would require reconsideration. |

## Interpretation and data conventions

Risk labels are relative assessments, not probabilities or maximum loss estimates. "Consider selectively" identifies a credible candidate at the displayed valuation; "watch price" calls for a better entry or stronger evidence; "cyclical opportunity" requires normalized earnings analysis; "speculative" entails substantial financing, execution or binary clinical risk.

Company financial figures refer to the stated fiscal period, which differs across issuers. Market multiples are rounded snapshots retrieved October 27, 2026 from Stock Analysis. Pages mix real-time and delayed market data and are not synchronized executable quotes. Forecast P/E may use adjusted earnings and varying estimate windows; it is not directly comparable to audited GAAP P/E or to a multiple calculated from management guidance.

Market capitalizations were refreshed separately from Stock Analysis on October 27, 2026. They are rounded vendor equity values, not enterprise values, free floats, AUM or fully diluted transaction values. USD is used for U.S.-listed issuer/ADR pages; other listings retain their stated currency, with no FX conversion. ADR and ordinary listings are not added together. Share classes, share-count revisions and pending deals can affect the basis. This cap-only refresh does not update earnings, valuation grades or the original research cutoff.

The connected Massive subscription did not include valuation ratios. Public company disclosures and Stock Analysis were used instead. Public vendor ratios are not independently audited or fully reconstructed here; check the linked underlying filing and live quote before acting.

FCF = free cash flow. EV = enterprise value. EBITDA = earnings before interest, tax, depreciation and amortization. TTM = trailing twelve months. N/M = not meaningful. A low P/E during a commodity earnings peak can be a warning rather than a bargain.

# Buying access | Robinhood U.S. and alternatives

Public Robinhood security pages advertise buying routes for 61 of the 64 investments, including six through alternate ADR tickers. Keyence, Neo Performance Materials and Insilico Medicine require another route for the listings assessed. This assumes a U.S. Robinhood Financial investing account; it is not a check of your personal account or a claim about another country's Robinhood service.

| Company | Robinhood U.S. route | Home-exchange route / platform |
|---|---|---|
| FANUC | Yes via FANUY ADR | Interactive Brokers<br>6954 \| Tokyo |
| Keyence | No direct 6861 | Interactive Brokers<br>6861 \| Tokyo |
| Yaskawa Electric | Yes via YASKY ADR | Interactive Brokers<br>6506 \| Tokyo |
| SK hynix | Yes via SKHY ADR | Interactive Brokers<br>000660 \| Korea Exchange |
| Lynas Rare Earths | Yes via LYSDY ADR | Interactive Brokers<br>LYC \| ASX |
| Neo Performance Materials | No; NOPMF page is watch-only | Interactive Brokers<br>NEO \| Toronto |
| Insilico Medicine | No direct 3696 | Interactive Brokers<br>3696 \| Hong Kong |
| BAE Systems | Yes via BAESY ADR | Interactive Brokers<br>BA. \| London |
| Rheinmetall | Yes via RNMBY ADR | Interactive Brokers<br>RHM \| Xetra |

Robinhood rules and ADR explanation. S101, S102, S103

## How to interpret the labels

RH U.S.: Yes means the asset-specific public page promotes trading that ticker. ADR routes represent the same underlying company, but are different securities from the home-exchange shares. Dollar quotes, ADR ratios, depositary fees, spreads and liquidity can differ. SKHY began Nasdaq trading in July 2026; ten SKHY ADRs represent one Korean ordinary share.

SK hynix listing and receipt basis. S108, S109

Neo's asset-specific page uses watch-only wording, so it is treated as unavailable for a new purchase despite a generic Buy/sign-up section. A quote page alone is not proof of purchase support. S104

IBKR = Interactive Brokers. The named alternatives are documented exchange-access routes; individual security and account order eligibility were not authenticated. Enable the relevant country's stock permissions and confirm the exact company/exchange in the order ticket. Residence, IBKR entity, FX funding, trading lots, fees, halts and temporary restrictions can affect access. Final availability is the buy/order eligibility shown in your account. S105, S106, S107

# What the themes share

Physical AI combines sensing, computing and action. A company can be commercially important to robotics while deriving only a small share of sales from robots. This report separates direct platforms from enabling sensors, controls and software. Remotely operated systems and surgeon-controlled robots are not described as fully autonomous.

Rare materials are interpreted broadly as rare earths, critical minerals and engineered specialty materials. Lithium, titanium and nickel are not rare-earth elements. Commodity abundance, processing difficulty, supply concentration and customer qualification are different issues; owning a deposit alone does not establish a profitable business.

Materials definitions and uses are grounded in the USGS 2026 Mineral Commodity Summaries and issuer product disclosures. S74

Defense spending is a multi-year demand driver. NATO allies committed to a 2035 target combining at least 3.5% of GDP for core defense with up to 1.5% for broader defense and security investment. It is not an immediate 5%-of-GDP equipment order, and national appropriations and execution still matter.

NATO source, updated June 29, 2026. S73

## Accounting checks that change the conclusion

| Company / issue | Research implication |
|---|---|
| Tempus: investment gains | Q2 GAAP net income was $5.6m, including $98.5m unrealized investment gains. Do not assume underlying operating profitability from the headline. S39 |
| Schrodinger: investment-related income | A gain associated with the Ajax transaction contributed to Q2 net income. Contract value, recurring software economics and cash burn are better operating indicators. S35 |
| Almonty: derivative revaluation | C$173.1m net non-cash gains explain most of Q2 C$181.8m net income. A P/E based on this profit can mislead. S32 |
| SK hynix: gains and memory cycle | Investment gains boosted net profit, while exceptionally strong memory conditions raise peak-earnings risk. Normalize both effects. S19 |
| Symbotic: ownership and concentration | Most consolidated net income belongs to noncontrolling interests, and one customer generated 90.5% of quarterly revenue. Analyze the economic share owned by listed shareholders. S12 |

# 1. Physical AI and robotics

Favor installed equipment, recurring consumables, factory controls and proven customer returns. Many listed automation companies benefit from AI without selling autonomous humanoid robots. Surgical robots are generally surgeon-controlled; industrial automation is broader than AI.

## 01 Intuitive Surgical HIGH GROWTH | G4

NASDAQ: ISRG | Direct surgical robotics | Medium risk | Watch price

**Case.** An installed surgical base, clinician training and procedure-linked instruments create a durable recurring-revenue model. The investment case rests on procedure adoption and utilization.

**Evidence and finances.** Q3 2026 revenue rose 22% to $3.05bn; combined da Vinci and Ion procedures grew 15%. The da Vinci installed base reached 12,094. Cash and investments were $6.80bn. A $450m pretax antitrust settlement charge depressed GAAP earnings; the settlement still requires court approval.

**Valuation and watch points.** 37.3x forward earnings is a premium. Growth must remain strong to offset potential multiple compression. Track da Vinci 5 utilization, instruments revenue and hospital returns. Reconsider if procedure growth persistently slows while spending rises.

Sources: S01 | Valuation: V01

## 02 FANUC

TSE: 6954 | Direct industrial robots plus CNC and service | Medium risk | Consider selectively

**Case.** A broad robot, CNC and service franchise provides exposure to factory automation with a strong balance sheet. Established industrial deployments offer a clearer commercial base than early humanoid projects.

**Evidence and finances.** For April-September 2026, sales rose 16.2% to JPY473.7bn and operating income rose 35.7% to JPY116.7bn. Robots represented 40.5% of the latest quarter's sales. The reported equity ratio was 88.7%, supporting resilience through equipment downturns.

**Valuation and watch points.** 23.6x forward earnings looks more reasonable than several U.S. automation peers, although profits remain cyclical. Watch robot orders, automotive investment and Chinese demand. Persistent order declines or price pressure would weaken the thesis.

Sources: S02, S03 | Valuation: V02

## 03 Keyence

TSE: 6861 | Enabler: sensors, machine vision and measurement | Medium risk | Watch price

**Case.** Robots and automated factories need reliable perception and inspection. Keyence offers a way to participate across manufacturers rather than depending on one robot design.

**Evidence and finances.** For the quarter ended June 20, 2026, sales rose 32.8% to JPY346.6bn and operating income rose 44.7% to JPY187.1bn, a 54.0% operating margin. High operating profitability and substantial net assets provide a financial buffer; this is an equipment supplier, not a robot pure play.

**Valuation and watch points.** 33.7x forward earnings requires continued growth and margin durability. Watch overseas growth, inspection adoption and normalized margins. A sustained slowdown combined with declining margins would undermine the premium.

Sources: S04, S05 | Valuation: V03

Watch robot orders, installed-base utilization, recurring revenue, service attachment, factory investment and profit per share. Semiconductor test and factory automation often share the same capital-spending cycle.

# Physical AI and robotics | ranks 4-7

## 04 Rockwell Automation

NYSE: ROK | Enabler: factory controls, software and mobile automation | Medium risk | Watch price

**Case.** Factory controls and installed workflows make Rockwell relevant when manufacturers modernize operations. Integration complexity and switching costs support its competitive position.

**Evidence and finances.** Fiscal Q3 2026 sales were $2.31bn, with 10% organic growth. Adjusted EPS rose 22%; quarterly free cash flow was $654m. Cash generation is established, but the business remains exposed to manufacturers' investment budgets. Quarterly cash flow should not be annualized mechanically.

**Valuation and watch points.** 29.9x forward earnings and about 31.7x trailing free cash flow leave limited room for a weak industrial cycle. Track organic orders, software growth and cash conversion. Repeated guidance cuts or falling customer investment would weaken the case.

Sources: S06 | Valuation: V04

## 05 Teradyne

NASDAQ: TER | Mixed: collaborative robots; mainly semiconductor test | High risk | Watch price

**Case.** Universal Robots and mobile robotics provide automation exposure, while semiconductor testing adds demand from increasingly complex AI chips. The latter currently dominates financial results.

**Evidence and finances.** Q2 2026 sales were $1.329bn, including $100m from Robotics and $1.122bn from Semiconductor Test. Robotics was approximately 7.5% of total sales. GAAP EPS was $2.38. The balance sheet has little financial leverage, but earnings are linked to a concentrated, cyclical test market.

**Valuation and watch points.** 33.4x forward earnings and 60.4x trailing free cash flow demand strong execution. Watch robotics profitability separately from chip-test growth. Reassess if robotics cannot scale or AI-test demand normalizes sharply.

Sources: S07, S08 | Valuation: V05

## 06 Yaskawa Electric

TSE: 6506 | Direct industrial robots and precision motion | High risk | Consider selectively

**Case.** Robot arms, servo motors and motion controls provide direct exposure to automation equipment. A recovery in investment and operating execution could improve profitability.

**Evidence and finances.** For March-August 2026, revenue rose 9.8% to JPY285.6bn, while operating profit fell 5.5%. ERP implementation disrupted production and shipments. The company lowered its full-year operating-profit forecast from JPY60.0bn to JPY57.5bn, despite raising the revenue forecast.

**Valuation and watch points.** 19.9x forward earnings offers a less demanding entry than premium automation peers, but depends on margin recovery. Require evidence that shipment disruption is resolving. Continued execution problems or weakening orders would invalidate the recovery case.

Sources: S09, S10 | Valuation: V06

## 07 Symbotic

NASDAQ: SYM | Direct AI-enabled warehouse robotics | Very high risk | Speculative

**Case.** Warehouse automation has measurable labor and throughput benefits. A large deployment base can create recurring service opportunities if installations become consistently profitable.

**Evidence and finances.** Fiscal Q3 2026 revenue rose 22% to $721m, with $95m adjusted EBITDA and $1.7bn cash. Backlog was $22.5bn. One customer accounted for 90.5% of quarterly revenue. Only $11.7m of $55m consolidated net income was attributable to common stockholders; ownership structure matters.

**Valuation and watch points.** 56.1x forward earnings is demanding. Verify the fully diluted economic ownership and customer advances when assessing cash and enterprise value. Track non-Walmart growth and installation cash economics. Persistent concentration or deployment overruns would weaken the investment case.

Sources: S11, S12 | Valuation: V07

# 2. Chips and semiconductors

The strongest businesses control a bottleneck: chip manufacturing, accelerated computing, lithography, networking, process control or high-bandwidth memory. Owning several of them still creates a shared exposure to AI infrastructure spending.

## 01 Taiwan Semiconductor Manufacturing HIGH GROWTH | G2

NYSE: TSM / TWSE: 2330 | Leading-edge foundry and advanced packaging | High risk | Consider selectively

**Case.** TSMC supplies manufacturing infrastructure to competing chip designers, allowing participation across multiple AI winners. Process technology, yields and manufacturing scale form the core moat.

**Evidence and finances.** Q3 2026 revenue reached US$46.72bn, up 41.2% in U.S. dollars. Gross margin was 66.4% and operating margin 58.7%. Strong profitability funds heavy investment. Overseas expansion can raise costs, and free cash flow is lower than accounting profit after capital spending.

**Valuation and watch points.** 20.1x forward earnings appears reasonable relative to its competitive position; geopolitical risk warrants a discount. Track advanced-node and packaging capacity, yields and returns on overseas fabs. A Taiwan disruption could overwhelm ordinary valuation analysis.

Sources: S13 | Valuation: V08

## 02 NVIDIA HIGH GROWTH | G1

NASDAQ: NVDA | AI accelerators, networking and software ecosystem | High risk | Consider selectively

**Case.** Hardware, software tools and networking reinforce one another, creating switching costs beyond an individual chip. Robotics is additional optionality; current earnings are primarily driven by data centers.

**Evidence and finances.** Fiscal Q2 2027 revenue was $96.2bn, up 106%; Data Center revenue was $89.0bn. Reported gross margin was 75.0%. High margins and a capital-light design model support cash generation, although manufacturing and customer-spending concentration remain material.

**Valuation and watch points.** 17.8x forward earnings looks attractive only if forecasts are achievable. About 41.4x trailing free cash flow is a useful cross-check. Watch customer economics, software retention, custom chips and export access. Slowing demand alongside margin compression would weaken the thesis.

Sources: S14 | Valuation: V09

## 03 ASML

NASDAQ: ASML / Euronext: ASML | Advanced lithography equipment and service | High risk | Consider selectively

**Case.** Advanced semiconductor manufacturing depends on highly specialized lithography and an installed service base. Technical complexity and supplier integration create substantial barriers to entry.

**Evidence and finances.** Q3 2026 sales were EUR11.66bn, gross margin 57.5%, and Installed Base Management sales EUR3.29bn. Quarter-end cash and short-term investments were EUR12.74bn. Customer prepayments and delivery timing can make cash flow uneven.

**Valuation and watch points.** 25.1x forward earnings is defensible for its position, provided customer expansion plans convert to shipments. Track order conversion, advanced-system adoption and export access. Orders are not guaranteed revenue; cancellations or customer delays matter.

Sources: S15 | Valuation: V10

Watch customer capital spending, utilization, backlog conversion, export restrictions, power constraints, inventory and cash returns after capital investment. Memory earnings need a full-cycle stress test.

# Chips and semiconductors | ranks 4-7

## 04 Broadcom HIGH GROWTH | G3

NASDAQ: AVGO | Custom AI accelerators, networking and infrastructure software | High risk | Consider selectively

**Case.** Custom chips and network infrastructure offer exposure to hyperscalers designing their own compute platforms. Software provides a second earnings stream.

**Evidence and finances.** Fiscal Q3 2026 revenue was $29.6bn. AI semiconductor revenue reached $16.7bn; free cash flow was $13.7bn, or 46% of revenue. Cash generation is strong, but customer concentration, acquisition debt and the difference between GAAP and adjusted earnings need attention.

**Valuation and watch points.** 19.5x forward earnings is appealing relative to growth expectations; about 39.9x trailing free cash flow is less inexpensive. Watch AI program concentration, networking share and software retention. Customer insourcing or weaker pricing could damage returns.

Sources: S16 | Valuation: V11

## 05 KLA

NASDAQ: KLAC | Process control, inspection and metrology | High risk | Watch price

**Case.** More complex chips and packaging require more inspection to protect yields. Process-control demand can grow with manufacturing complexity rather than only wafer volumes.

**Evidence and finances.** Fiscal 2026 revenue was $13.58bn and free cash flow $3.77bn. The June quarter generated $817m free cash flow. Strong cash conversion and capital returns support the business. Customer capital spending and China exposure remain cyclical risks.

**Valuation and watch points.** 27.5x forward earnings and 52.5x trailing free cash flow warrant price discipline. Track inspection intensity, packaging orders and service revenue. A sharp equipment-spending downturn would pressure growth.

Sources: S17 | Valuation: V12

## 06 SK hynix

KRX: 000660 | High-bandwidth memory, DRAM and NAND | High risk | Cyclical opportunity

**Case.** HBM and advanced packaging are essential to AI compute performance. Technical qualification and production yields can support a differentiated memory franchise.

**Evidence and finances.** The company reported HBM4 mass shipments beginning in Q2 2026 and long-term agreements with around ten customers. Reported net cash was KRW69.4tn at June 30. Investment gains boosted net income, so headline P/E is a poor stand-alone signal.

**Valuation and watch points.** 6.6x trailing EV/EBITDA is more informative than the displayed 3.3x forward P/E, but still reflects unusually strong cycle earnings. Watch HBM yields, contract pricing, competing supply and capital spending. A supply surplus or qualification loss would weaken the thesis.

Sources: S18, S19 | Valuation: V13

## 07 Micron Technology

NASDAQ: MU | U.S.-listed HBM, DRAM and NAND producer | High risk | Cyclical opportunity

**Case.** Micron offers accessible U.S. exposure to memory content growth in AI systems. HBM products can improve mix, but conventional memory remains important.

**Evidence and finances.** The fiscal 2026 release reported HBM4 high-volume shipments and HBM4E development for expected 2027 production. Full-year capital investment, net, was $27.37bn. Capital requirements are substantial. Strong current profits and cash generation must be assessed against potential supply expansion.

**Valuation and watch points.** 5.2x forward earnings is not automatically cheap in a memory upcycle. Stress-test earnings at materially lower prices and utilization. Track HBM qualification, pricing and industry supply. Owning both Micron and SK hynix increases the same memory-cycle exposure.

Sources: S20, S21 | Valuation: V14

# 3. Rare and critical materials

This category covers rare earths and other strategically important materials. Lithium, titanium and nickel are not rare-earth elements. Several selections are processors or qualified materials manufacturers rather than miners; commercial value often lies in processing and customer qualification.

## What each material does

| Company | Material functionality |
|---|---|
| Lynas | NdPr: compact permanent magnets. Dy/Tb: improved high-temperature magnet performance in motors and aerospace. |
| Albemarle | Lithium: rechargeable batteries for vehicles, mobile robots and storage. Bromine: industrial specialties. |
| Neo | Rare-earth magnetics: motors. Hafnium: advanced electronics and high-temperature materials. |
| Materion | Stiff, light beryllium: aerospace optics and structures. Beryllium alloys: demanding electrical components. |
| ATI | Titanium: lightweight, corrosion-resistant structures. Nickel superalloys: hot turbine components. |
| MP Materials | NdPr: permanent magnets for compact motors and robotics; heavy rare earths broaden performance. |
| Almonty | Tungsten: hard cutting tools and dense, heat-resistant industrial, aerospace and defense components. |

Material functions: USGS mineral summaries and issuer product disclosures. S23, S28

## Where the economic value sits

Lynas and MP combine resources with separation and downstream expansion. Neo provides processing and magnetic materials. Materion and ATI earn value through specialized manufacturing and customer qualification. Albemarle is a lithium-cycle exposure, while Almonty depends heavily on a tungsten production ramp. These are different business models, so a single commodity multiple is not an adequate comparison.

# Rare and critical materials | ranks 1-3

## 01 Lynas Rare Earths HIGH GROWTH | G5

ASX: LYC / OTC: LYSDY (1:1 ADR) | Integrated rare-earth mining and separation | High risk | Consider selectively

**Case.** An operating non-China mining and separation chain is more established than an undeveloped deposit. Expanded heavy-rare-earth capability can improve product mix.

**Evidence and finances.** FY2026 revenue was A$977.9m; NdPr sales were 7,337 tonnes. Cash and short-term deposits were A$1.21bn, partly reflecting an equity raise. Operational scale helps, but realized prices and ramp costs remain important.

**Valuation and watch points.** 22.2x forward earnings assumes improved earnings persist; trailing EV/EBITDA was much higher at 37.3x. Watch saleable output and contract economics. Lower prices, processing disruption or poor expansion returns would weaken the thesis.

Sources: S22, S23, S24 | Valuation: V15

## 02 Albemarle

NYSE: ALB | Lithium production and specialty chemicals | High risk | Cyclical opportunity

**Case.** Established resources, processing expertise and operating scale offer a more credible lithium recovery investment than a project awaiting financing.

**Evidence and finances.** Q2 2026 sales were $1.7bn and adjusted EBITDA $858m. Quarterly free cash flow was $638m. Management identified a larger Talison dividend and non-recurring working-capital benefits in cash flow; these should not be extrapolated.

**Valuation and watch points.** 9.5x forward earnings and 7.7x trailing EV/EBITDA are attractive only on sustainable lithium assumptions. Watch realized lithium prices, cost reductions and capital restraint. Renewed oversupply or cash burn would weaken the case.

Sources: S25, S23 | Valuation: V16

## 03 Neo Performance Materials

TSX: NEO | Rare-earth processing, magnets and specialty rare metals | High risk | Consider selectively

**Case.** Neo participates further along the value chain in separation, materials and magnets. European magnet capacity offers customer supply-chain diversification.

**Evidence and finances.** Q2 2026 adjusted EBITDA was US$57m. Management guided to the high end of US$140m-US$150m for 2026; its European magnet plant was shipping qualification samples. Strong rare-metals pricing boosted results. Commercial ramp and customer acceptance remain execution tasks.

**Valuation and watch points.** 8.9x trailing EV/EBITDA is reasonable if specialty-price gains normalize gradually. Require commercial magnet deliveries and durable cash generation. Pricing reversals or ramp delays would weaken the thesis.

Sources: S26, S23 | Valuation: V17

Watch realized prices, unit production cost, saleable output, recovery rates, funding and customer qualification. Government support can help economics but does not guarantee shareholder returns.

# Rare and critical materials | ranks 4-7

## 04 Materion

NYSE: MTRN | Beryllium and engineered specialty materials | Medium-high risk | Watch price

**Case.** Customer qualification and materials expertise can produce steadier economics than selling an undifferentiated mineral. Exposure spans semiconductors, aerospace and defense.

**Evidence and finances.** Q2 2026 value-added sales were $308.2m and adjusted EBITDA $71.8m. Management raised adjusted EPS guidance to $6.80-$7.20. Use value-added sales rather than gross metal pass-through revenue when judging underlying growth.

**Valuation and watch points.** 28.6x forward earnings is a quality premium; cash flow and expansion returns must justify it. Watch semiconductor demand and cash conversion. Customer qualification losses, cost overruns or weaker orders would undermine the case.

Sources: S27, S28 | Valuation: V18

## 05 ATI

NYSE: ATI | Titanium and nickel-based high-performance alloys | Medium-high risk | Watch price

**Case.** Demanding aerospace qualifications and specialized processing create barriers to entry. Aircraft production and defense demand can sustain a multi-year order cycle.

**Evidence and finances.** Q2 2026 sales rose 11% to $1.26bn, with aerospace and defense sales up 13%; adjusted EBITDA margin reached 22.6%. Capital intensity and aerospace customer concentration require attention. Results included a facility-sale gain.

**Valuation and watch points.** 28.3x forward earnings already assumes further improvement. Watch qualified output, engine demand and cash returns. Aircraft production delays or expansion problems would weaken the thesis.

Sources: S29, S23 | Valuation: V19

## 06 MP Materials

NYSE: MP | U.S. rare-earth mine-to-magnet supply chain | Very high risk | Watch price

**Case.** Domestic supply-chain development and long-term government support reduce some commercial uncertainty while the magnet business scales.

**Evidence and finances.** Q2 2026 reported $108.5m revenue plus $17.6m price-protection income. NdPr output rose 41%; Magnetics generated $16.5m revenue. The NdPr agreement provides a $110/kg benchmark floor under specified terms, not a guaranteed stock return. Expansion still requires capital and execution.

**Valuation and watch points.** 119.3x forward earnings and 14.9x trailing EV/sales embed substantial future success. Track saleable magnets, customer qualification and spending. Poor execution or changes in support economics could damage value.

Sources: S30, S31 | Valuation: V20

## 07 Almonty Industries

NASDAQ: ALM | Tungsten production and Sangdong ramp | Very high risk | Speculative

**Case.** Sangdong can expand non-China tungsten supply. Existing production and customer offtake provide a commercial base for the expansion.

**Evidence and finances.** Q2 2026 revenue was C$43.0m and adjusted EBITDA C$17.6m. Sangdong Phase I remained in commissioning and ramp-up. A US$800m convertible issue strengthened cash but adds financing claims. C$173.1m non-cash derivative and warrant gains drove most reported net income.

**Valuation and watch points.** The displayed P/E is misleading; trailing EV/sales of 39.1x prices in a major production increase. Track throughput, recovery, unit costs and dilution. Ramp failure or weaker tungsten pricing would materially impair the thesis.

Sources: S32 | Valuation: V21

# 4. Biotech and AI

AI can improve target selection, molecule design and clinical workflows; clinical success still depends on biology and trials. This list distinguishes a profitable drug company, a discovery software business, a diagnostics/data platform and clinical-stage drug developers.

## 01 Regeneron Pharmaceuticals

NASDAQ: REGN | Profitable biotech using genetics, large datasets and AI | Medium-high risk | Consider selectively

**Case.** A commercial drug portfolio can finance research internally. Genetics and linked clinical data create a credible foundation for applying AI, although AI-specific revenue is not separately disclosed.

**Evidence and finances.** Q2 2026 revenue rose 17% to $4.29bn; non-GAAP EPS was $14.29. The 2026 proxy describes AI integration with molecular and health-record data. Established earnings reduce reliance on equity financing. Drug competition, reimbursement and pipeline execution still dominate the investment outcome.

**Valuation and watch points.** 12.3x forward earnings is among the more compelling valuation/quality combinations in this research. Watch Dupixent economics, EYLEA competition and pipeline productivity. Deteriorating core-drug cash flows would weaken the case.

Sources: S33, S34 | Valuation: V22

## 02 Schrodinger

NASDAQ: SDGR | Physics-plus-AI discovery software and partnered drugs | High risk | Speculative

**Case.** Selling molecular-design tools offers a broader route to adoption than relying on one owned drug. Partnered programs provide upside if the platform contributes to successful medicines.

**Evidence and finances.** Q2 2026 annual contract value grew 27% to $29.6m; cash and securities were $418.8m. Software revenue declined during a hosted-licensing transition. Quarterly net income included a large investment-related gain. Measure operating cash burn and contract value rather than treating that profit as recurring.

**Valuation and watch points.** 5.9x trailing EV/sales requires durable software growth; no meaningful P/E. Watch hosted conversion, retention and spending. Stalling contract growth alongside persistent cash burn would undermine the investment case.

Sources: S35, S36 | Valuation: V23

## 03 Insilico Medicine

HKEX: 3696 | AI-native drug discovery, licensing and owned pipeline | Very high risk | Speculative

**Case.** Licensing revenue and a late-stage owned program provide distinct routes to value. This is one of the more direct public exposures to AI-driven drug discovery.

**Evidence and finances.** H1 2026 revenue was US$106.3m and cash/investments US$584.8m. The first patient was dosed in the China Phase III rentosertib IPF trial in September. Positive interim earnings do not establish recurring drug-sale profits. Licensing payments can be lumpy, and the lead drug remains investigational.

**Valuation and watch points.** 15.7x trailing EV/sales requires substantial future licensing or clinical success. Watch controlled trial results, actual milestone receipts and development cost. Failure of the lead program could materially reduce value.

Sources: S37, S38 | Valuation: V24

Watch externally validated results, trial design, patient numbers, clinical endpoints, actual cash payments, cash burn and fully diluted shares. Partnership headline values are usually conditional milestones, not committed revenue.

# Biotech and AI | ranks 4-7

## 04 Tempus AI HIGH GROWTH | G6

NASDAQ: TEM | Precision diagnostics, clinical data and AI modeling | High risk | Watch price

**Case.** Testing generates clinical data that can support data licensing and modeling. Existing diagnostic revenue provides more commercial validation than a pre-revenue drug platform.

**Evidence and finances.** Q2 2026 sales rose 22% to $382.5m; Insights revenue grew 36%. Cash and securities were $820.7m. Reported $5.6m GAAP net income included $98.5m unrealized investment gains. The proposed Personalis acquisition adds integration and financing considerations.

**Valuation and watch points.** 8.9x trailing EV/sales is demanding for a business with a large diagnostics component. Watch reimbursement, organic test growth, data renewals and acquisition economics. Data/privacy constraints or poor cash conversion would weaken the case.

Sources: S39, S40, S41 | Valuation: V25

## 05 Recursion Pharmaceuticals

NASDAQ: RXRX | AI-enabled experimental drug discovery and clinical pipeline | Very high risk | Speculative

**Case.** Large experimental datasets, partner programs and an owned clinical pipeline provide several opportunities to validate the platform. Success must be measured in drugs and cash economics.

**Evidence and finances.** The October 15 update reported additional REC-4881 and REC-1245 clinical data and a $200m offering, extending management's expected cash runway into 2029. June cash was $556.8m before that financing; Q2 operating cash use was $105.9m. The October raise improves runway while diluting shareholders.

**Valuation and watch points.** P/E is not meaningful. Evaluate pipeline risk-adjusted value, partner receipts and cash remaining per diluted share. Watch registrational discussions, controlled data and burn. Promising early responses are not proof of approval or commercial success.

Sources: S42, S43 | Valuation: V26

## 06 Generate Biomedicines

NASDAQ: GENB | Generative protein engineering and clinical biologics | Very high risk | Speculative

**Case.** Protein engineering, experimental validation and partnered programs create a direct AI-biotechnology exposure. A Phase III asthma program gives the company a more advanced clinical test of value.

**Evidence and finances.** June cash and securities were $457.4m; management projected funding into H1 2028. The October Zealand agreement included $30m upfront and conditional milestones. H1 operating cash use was $138.3m. The potential $1.2bn collaboration headline is not cash already earned.

**Valuation and watch points.** P/E and sales multiples are poor anchors for this clinical-stage company. Use conservative, probability-adjusted program values. Watch Phase III execution, differentiation and cash burn. Clinical disappointment or additional financing needs could sharply reduce per-share value.

Sources: S44, S45, S46 | Valuation: V27

## 07 Absci

NASDAQ: ABSI | Generative antibody design and owned clinical programs | Very high risk | Speculative

**Case.** AI-designed antibodies and an owned prolactin-receptor program offer significant upside if clinical proof emerges, with correspondingly large binary risk.

**Evidence and finances.** June cash/securities were $201.1m after financing; management projected runway into H2 2028. The September update anticipated an endometriosis Phase II start in mid-2027. Q2 revenue was only $0.3m and net loss $33.2m. Lilly's strategic investment does not grant it rights to ABS-201.

**Valuation and watch points.** P/E and tiny-revenue sales multiples are not useful. Value cash plus conservative clinical options, accounting for future dilution. Watch unblinded efficacy, safety and revised timelines. Early tolerability and pharmacokinetics do not establish treatment efficacy.

Sources: S47, S48 | Valuation: V28

# 5. Defense

Established defense businesses offer installed platforms, support revenue and long procurement cycles. The investment case depends on funded demand, execution and cash conversion. Political spending commitments should not be counted as current company orders.

## 01 General Dynamics

NYSE: GD | Submarines, defense systems, IT and Gulfstream | Medium risk | Consider selectively

**Case.** Long-lived submarine programs and defense operations provide visibility, while Gulfstream adds a commercial growth engine. Its valuation is relatively restrained within this shortlist.

**Evidence and finances.** Q2 2026 sales rose 8.1% to $14.1bn, EPS rose 13.4%, and operating cash flow was $1.9bn. Company backlog was $136.5bn. Quarter-end cash was $4.3bn against $7.5bn debt. An additional $50.4bn estimated potential contract value is separate from backlog.

**Valuation and watch points.** 20.3x forward earnings and 15.0x trailing free cash flow offer a credible quality/value balance. Watch submarine throughput, Gulfstream deliveries and working capital. Shipyard problems or a business-jet downturn would weaken returns.

Sources: S49 | Valuation: V29

## 02 RTX

NYSE: RTX | Air defense, missiles, sensors and commercial aerospace | Medium risk | Consider selectively

**Case.** Air-defense replenishment and commercial aerospace aftermarket demand provide two earnings drivers. Installed products support long service relationships.

**Evidence and finances.** Q3 2026 sales rose 11% to $25.0bn. Backlog was $340bn, including $164bn defense and $176bn commercial. Management raised 2026 free-cash-flow guidance to $9.0bn-$9.2bn. Quarterly adjusted EPS included $0.25 from tariff-cost recovery.

**Valuation and watch points.** 25.4x forward earnings is higher than several primes; continued growth and improved cash conversion are necessary. Watch production capacity, engine remediation costs and aftermarket growth. Costly engine issues or weaker delivery execution would reduce the appeal.

Sources: S50 | Valuation: V30

## 03 BAE Systems

LSE: BA. (BA.L) | Diversified U.K., U.S. and allied defense programs | Medium risk | Consider selectively

**Case.** Geographic and product diversification provide exposure to allied defense spending across naval, land, electronics and aerospace programs.

**Evidence and finances.** H1 2026 company-defined sales were GBP15.77bn; underlying EBIT was GBP1.70bn and free cash flow GBP1.79bn. Order backlog was GBP84.0bn, while the IFRS order book was GBP62.7bn. Those measures should not be interchanged.

**Valuation and watch points.** 22.4x forward earnings is reasonable for its position, subject to delivery and program risks. Watch capacity investment, contract quality and cash conversion. Export restrictions, fixed-price overruns or weaker budget conversion would impair the thesis.

Sources: S51 | Valuation: V31

Watch funded awards, book-to-bill, program margins, labor availability, advance payments and cash flow. Backlog definitions differ by company; compare like with like.

# Defense | ranks 4-7

## 04 Northrop Grumman

NYSE: NOC | Strategic aircraft, space, sensors and deterrence | Medium-high risk | Consider selectively

**Case.** Specialized strategic programs have high barriers to entry and long service lives. The valuation offers a reasonable starting point for execution-sensitive defense exposure.

**Evidence and finances.** Q3 2026 sales rose 7% to $11.1bn; net awards were $16bn, book-to-bill 1.5x, and backlog $110bn. Operating margin was 11.4%. Long-duration development and production programs can generate charges before cash benefits arrive.

**Valuation and watch points.** 19.1x forward earnings is attractive if program economics hold. Track aircraft and strategic-program costs, space demand and cash conversion. Further material fixed-price losses or program reductions would weaken the case.

Sources: S52 | Valuation: V32

## 05 Lockheed Martin

NYSE: LMT | Combat aircraft, missiles, air defense and sustainment | Medium-high risk | Consider selectively

**Case.** Large installed platforms and sustainment needs support repeat demand. Missile production growth adds a second route to value beyond aircraft deliveries.

**Evidence and finances.** Q3 2026 sales rose 11% to $20.7bn, free cash flow was $3.0bn, and backlog reached $292bn. The company warned that F-35 Lot 20 costs had begun exceeding current contractual authorization and funding; future cash flow needs monitoring.

**Valuation and watch points.** 19.8x forward earnings and 17.5x trailing free cash flow appear reasonable, with program and funding risk. Track aircraft funding, delivery acceptance and missile margins. Unresolved authorization shortfalls or significant new program charges would weaken the thesis.

Sources: S53 | Valuation: V33

## 06 L3Harris Technologies

NYSE: LHX | Communications, space, electronics and missile propulsion | Medium-high risk | Consider selectively

**Case.** Communications, sensing and propulsion are required across many platforms. Capacity investment in missile propulsion can support growth without relying on one aircraft program.

**Evidence and finances.** Q2 2026 revenue was $5.9bn and free cash flow $771m; backlog reached $42bn. Sam Mehta became CEO in August. A $1bn government investment supports Missile Solutions, but preferred-security claims and eventual minority ownership affect shareholder economics.

**Valuation and watch points.** 20.9x forward earnings is reasonable. Do not assume the originally planned 2026 Missile Solutions IPO occurs; reporting indicates a delay to mid-2027. Watch new leadership, capacity returns and ownership terms. Governance problems, cash shortfalls or poor expansion returns would weaken the thesis.

Sources: S54, S55, S56, S57 | Valuation: V34

## 07 Rheinmetall HIGH GROWTH | G7

Xetra: RHM | European ammunition, vehicles and defense production | High risk | Watch price

**Case.** European rearmament and production expansion offer significant growth potential. The challenge is converting rapid order growth into timely deliveries and shareholder cash.

**Evidence and finances.** H1 2026 sales rose 39% to EUR5.23bn, with a 15.0% operating-result margin. Operating free cash flow was negative EUR1.62bn. Inventory, investment and advance-payment timing consumed cash. The EUR80.5bn backlog measure includes expected call-offs under framework agreements.

**Valuation and watch points.** 22.9x forward earnings appears far cheaper than 66.0x trailing earnings because substantial growth is assumed. Track cash conversion and funded call-offs. Delays, weaker advance payments or lower realized margins would challenge the valuation.

Sources: S58, S59 | Valuation: V35

# 6. Defense robotics and autonomy

This category includes unmanned platforms and the sensors, computing and control systems needed to operate them. An unmanned vehicle may be remotely controlled rather than fully autonomous. Rankings favor financial quality as well as direct exposure.

## 01 Teledyne Technologies

NYSE: TDY | Mixed: FLIR robots, imaging, sensors and unmanned systems | Medium risk | Consider selectively

**Case.** Teledyne supplies sensing across platforms while FLIR adds direct ground-robot and drone products. Diverse end markets reduce dependence on one autonomy program.

**Evidence and finances.** Q3 2026 sales were $1.685bn and free cash flow $319.5m. Management reported a 0.9x consolidated leverage ratio. Strong cash generation supports investment and acquisitions. The pending Varex purchase adds integration risk and changes future leverage.

**Valuation and watch points.** 27.4x forward earnings is a premium for resilience; robotics revenue is not separately disclosed. Watch sensor demand, acquisition returns and organic growth. A deterioration in cash conversion or integration execution would weaken the case.

Sources: S60, S61, S62 | Valuation: V36

## 02 Curtiss-Wright

NYSE: CW | Enabler: embedded computing, sensors and actuation | Medium risk | Watch price

**Case.** Qualified electronics and control components can participate across multiple unmanned programs. This offers exposure to platform growth without selecting a single vehicle winner.

**Evidence and finances.** Q2 2026 sales were $924m, adjusted operating margin 19.4%, and free cash flow $160m. The company supplies edge computing for unmanned applications. Management guided to $585m-$605m annual free cash flow. Civil and nuclear businesses also materially influence results.

**Valuation and watch points.** 29.5x forward earnings and 28.2x trailing free cash flow require continued execution. Watch defense-electronics orders, content wins and margins. Loss of program content or sustained order weakness would undermine the premium.

Sources: S63, S64, S65 | Valuation: V37

## 03 AeroVironment HIGH GROWTH | G8

NASDAQ: AVAV | Direct unmanned systems; broader defense technology after acquisitions | High risk | Consider selectively

**Case.** An established unmanned-systems business offers more direct exposure than diversified component suppliers. Scale and follow-on production orders matter more than prototype announcements.

**Evidence and finances.** Fiscal Q1 2027 revenue was $480.5m, up 6%. Autonomous Systems generated $346.0m, and funded backlog reached $1.5bn. GAAP net loss was $5.1m versus $53.4m adjusted EBITDA. Acquisition accounting and BlueHalo integration complicate comparisons and per-share analysis.

**Valuation and watch points.** 37.7x forward earnings and 3.3x trailing EV/sales embed growth and integration success. Watch funded orders, organic growth, margins and operating cash. Weak conversion of backlog to cash or integration difficulties would damage the thesis.

Sources: S66, S67 | Valuation: V38

Watch funded production orders, deployment follow-ons, organic growth, free cash flow and acquisition economics. A demonstration, prototype selection or contract ceiling is not a scaled production business.

# Defense robotics and autonomy | ranks 4-7

## 04 Huntington Ingalls Industries

NYSE: HII | Mixed: naval autonomy; predominantly shipbuilding | High risk | Consider selectively

**Case.** REMUS underwater vehicles and ROMULUS surface vessels add naval-autonomy optionality to an established defense contractor. The stock's outcome remains dominated by shipbuilding execution.

**Evidence and finances.** Q2 2026 sales were $3.4bn and backlog $57.3bn. ROMULUS advanced to a Navy evaluation phase; HII delivered a REMUS 130 vehicle. Quarterly free cash flow was negative $150m. Management still projected $500m-$600m for the year, highlighting timing and execution sensitivity.

**Valuation and watch points.** 14.3x forward earnings is comparatively modest, but low shipbuilding margins justify caution. Watch shipyard throughput, labor and funded autonomy orders. Persistent cash shortfalls or contract overruns would weaken the case.

Sources: S68 | Valuation: V39

## 05 Leonardo DRS

NASDAQ: DRS | Enabler: sensors, power, counter-drone systems and AI integration | Medium-high risk | Consider selectively

**Case.** Sensors and power systems are needed across crewed and uncrewed platforms. A demonstrated maritime integration provides tangible autonomy exposure, although this is not a robot pure play.

**Evidence and finances.** Q2 2026 revenue was $913m, up 10%, with $5.1bn funded backlog. DRS integrated its counter-drone package on an autonomous surface vessel. The announced $450m Raft acquisition expands software capabilities but adds integration and valuation risk; parent control affects governance.

**Valuation and watch points.** 26.6x forward earnings is reasonable only if recent margin gains persist. Watch organic bookings, integration returns and production awards. Prototype activity without scaled orders would limit the autonomy thesis.

Sources: S69, S70 | Valuation: V40

## 06 Kratos Defense & Security Solutions

NASDAQ: KTOS | Direct unmanned aircraft plus propulsion and other defense systems | Very high risk | Speculative

**Case.** Unmanned aircraft and propulsion provide upside from a shift toward more distributed systems. Broader government-systems growth supports the company while unmanned programs scale.

**Evidence and finances.** Q2 2026 revenue was $458.8m, with 19.1% organic growth. Unmanned Systems generated $79.1m, about 17.2% of total revenue. GAAP operating loss was $1.6m; free cash use was $18.9m. Strong consolidated growth did not yet translate into robust operating cash.

**Valuation and watch points.** 43.1x forward earnings and 72.9x trailing EV/EBITDA price in substantial future improvement. Watch production contracts and unmanned segment margins. Delayed awards, ongoing cash use or dilution could materially reduce returns.

Sources: S71 | Valuation: V41

## 07 Elbit Systems

NASDAQ / TASE: ESLT | Direct unmanned aircraft within diversified defense technology | High risk | Watch price

**Case.** Unmanned aircraft, sensing and electronics provide an established product base and international customer relationships. The broader portfolio helps fund development.

**Evidence and finances.** Q2 2026 revenue was $2.29bn and backlog $32.0bn. Company commentary noted increased UAV sales in Israel, despite weaker overall Aerospace sales. GAAP quarterly net income was $173.6m. Export access, conflict-related disruption and working capital can materially affect results.

**Valuation and watch points.** 48.3x forward earnings is demanding relative to diversified defense peers and raises the risk of multiple compression. Watch export orders, margins and cash conversion. Restrictions, disruption or slower growth would make the premium harder to justify.

Sources: S72 | Valuation: V42

# Requested additions | Physical AI and robotics | 8 U.S. additions

Eight new U.S.-headquartered listed companies, selected for commercial relevance, financing capacity and complementary exposure. Ordered by the factor score; ties share priority. Platforms and components are distinguished from robots and autonomy.

## U.S. #1 Alphabet

GOOGL / GOOG | NASDAQ | Stock | High risk | HQ: Mountain View, California

**Function and investment case.** Alphabet combines commercial Waymo robotaxi services with Intrinsic industrial-robotics software, which joined Google in February 2026. This is funded platform exposure: search, advertising and cloud still dominate consolidated economics.

**Evidence and finances / costs.** Q2 revenue rose 24% to $119.8bn and operating margin reached 34%. Cash and marketable securities totaled $242.5bn. Investment gains materially inflated GAAP earnings; quarterly free cash flow was negative as capex rose.

**Valuation and growth conditions.** Use normalized operating earnings rather than the investment-gain headline. At 24.0x forward earnings, monitor Waymo safety, paid utilization, losses and industrial deployments. Alphabet share classes represent one company, not two separate investments.

Sources: S119, S120, S121 | Valuation: V43

## U.S. #2 Amazon

AMZN | NASDAQ | Stock | High risk | HQ: Seattle, Washington

**Function and investment case.** Amazon operates a fleet exceeding one million robots, with DeepFleet coordinating warehouse movement. Its investment route is lower fulfillment cost and better service, rather than a separately disclosed robot-sales business.

**Evidence and finances / costs.** Q2 revenue rose 20% to $200.6bn and operating income was $27.5bn. TTM operating cash flow was $161.4bn, but free cash flow was an outflow of $7.6bn amid heavy investment. Anthropic-related gains inflated net income.

**Valuation and growth conditions.** At 27.2x forward earnings, test fulfillment savings and AWS cash returns against capital spending. Do not attribute all AWS/retail growth to robotics. Monitor utilization, cost per delivery, lease obligations and cash conversion.

Sources: S122, S123 | Valuation: V44

## U.S. #2 Emerson Electric

EMR | NYSE | Stock | Medium-high risk | HQ: St. Louis, Missouri

**Function and investment case.** Emerson enables sensing, decision making and control in physical systems. Its SiMa.ai collaboration brings AI workloads to industrial PCs; the broader opportunity includes factory and process autonomy, with robot exposure spread through the automation stack.

**Evidence and finances / costs.** Fiscal Q3 sales were $4.87bn, underlying sales grew 6%, and free cash flow was $1.32bn. Management raised full-year free-cash-flow guidance to approximately $3.6bn; guidance is not cash already earned.

**Valuation and growth conditions.** At 23.4x forward earnings, monitor underlying orders, software retention, leverage and conversion of edge-AI projects into recurring economics. Separate adjusted segment EBITA from GAAP operating profit and assess acquisition returns.

Sources: S124, S125 | Valuation: V45

# Requested additions | Physical AI and robotics | 8 U.S. additions

Eight new U.S.-headquartered listed companies, selected for commercial relevance, financing capacity and complementary exposure. Ordered by the factor score; ties share priority. Platforms and components are distinguished from robots and autonomy.

## U.S. #4 Stryker

SYK | NYSE | Stock | Medium-high risk | HQ: Portage, Michigan

**Function and investment case.** Stryker provides surgeon-controlled orthopaedic robotics through Mako. The July U.S. launch of Mako RPS extends its platform to handheld robotic knee procedures; these systems assist clinicians and are not autonomous surgeons.

**Evidence and finances / costs.** Q2 sales rose 9.4% to $6.6bn, with 9.0% organic growth and a 25.2% GAAP operating margin. Management reported progress recovering from a cyber incident, which remains an operational consideration.

**Valuation and growth conditions.** At 18.9x vendor forward earnings, verify the adjusted estimate basis, procedure growth, implant pull-through and Mako adoption. Debt, integration spending and cyber resilience should be assessed alongside recurring procedure demand.

Sources: S126, S127 | Valuation: V46

## U.S. #5 Cognex

CGNX | NASDAQ | Stock | High risk | HQ: Natick, Massachusetts

**Function and investment case.** Cognex supplies the machine-vision systems that help automated equipment locate, inspect and guide work. OneVision broadens AI application deployment; the company is an enabling supplier, not a producer of general-purpose humanoids.

**Evidence and finances / costs.** Q2 revenue rose 17% to $291m, operating margin was 29.4%, and free cash flow was $68m. The company reported $755m in cash and investments and no debt at quarter-end.

**Valuation and growth conditions.** At 32.5x forward earnings, require customer diversification, sustained conversion and adoption beyond a cyclical recovery. Monitor bookings, electronics and automotive demand, pricing, and recurring use of AI-enabled applications.

Sources: S128, S129 | Valuation: V47

## U.S. #6 Deere & Company

DE | NYSE | Stock | High risk | HQ: Moline, Illinois

**Function and investment case.** Deere connects perception to physical action through See & Spray and autonomous tillage systems. Existing-machine upgrades and dealer distribution offer a route to adoption; autonomy features have equipment, task and availability constraints.

**Evidence and finances / costs.** Fiscal Q3 Production & Precision Agriculture sales declined 6%, while Small Ag & Turf and Construction & Forestry sales grew. Current product materials describe camera/neural-network perception and targeted application rather than unrestricted autonomy.

**Valuation and growth conditions.** At 30.4x forward earnings, distinguish technology adoption from an agricultural equipment recovery. Evaluate equipment economics separately from financing receivables, and monitor customer payback, software/upgrade attachment and normalized cash flow.

Sources: S130, S131, S132 | Valuation: V48

# Requested additions | Physical AI and robotics | 8 U.S. additions

Eight new U.S.-headquartered listed companies, selected for commercial relevance, financing capacity and complementary exposure. Ordered by the factor score; ties share priority. Platforms and components are distinguished from robots and autonomy.

## U.S. #7 Ouster

OUST | NASDAQ | Stock | Very high risk | HQ: San Francisco, California

**Function and investment case.** Ouster sells sensing and perception products used in robotics, warehouse automation, yard logistics and infrastructure. Its lidar/camera offering provides direct physical-AI inputs while spreading exposure across use cases.

**Evidence and finances / costs.** Q2 revenue was approximately $55m, up 56%, with 49% GAAP gross margin. The company reported an $18m net loss, $4m adjusted EBITDA loss and $263m in cash, restricted cash and short-term investments.

**Valuation and growth conditions.** At 10.2x trailing EV/sales, growth must convert to cash. Track product margins, repeat deployments, integration costs and share issuance. Supplier relevance alone does not justify an aggressive valuation or eliminate financing risk.

Sources: S133 | Valuation: V49

## U.S. #8 Aurora Innovation

AUR | NASDAQ | Stock | Very high risk | HQ: Pittsburgh, Pennsylvania

**Function and investment case.** Aurora has launched driverless commercial trucking and is working toward a Driver-as-a-Service model. This is direct autonomy exposure, with far less established economic proof than the diversified platform and equipment companies above.

**Evidence and finances / costs.** Q2 revenue was $2m versus $225m operating cash use and $31m capex. Nearly $1.2bn in cash and short-term investments followed financing; the quarter included issuance of 30m Class A shares.

**Valuation and growth conditions.** The $10.26bn equity value requires major commercial scaling. A year-end fleet target is not achieved deployment or recurring profit. Require safety performance, paid utilization, customer economics and a funding plan that protects per-share value.

Sources: S134, S135 | Valuation: V50

# Requested additions | Additional operating companies

Requested additions to physical AI and critical materials. These supplement the original seven-per-theme rankings.

## Tesla

TSLA | NASDAQ | Stock | Very high risk

**Function and investment case.** Tesla offers full-stack physical-AI exposure, but Optimus remains a development and commercialization thesis. FSD (Supervised) still requires driver oversight; it should not be equated with unattended autonomy.

**Evidence and finances / costs.** The September 30, 2026 filing reported $45.45bn of cash and investments. This supports investment capacity, while simultaneous vehicle, compute and robotics spending raises the hurdle for returns.

**Valuation and growth conditions.** The 189.9x forward earnings snapshot embeds substantial success. Monitor paid deployment, intervention rates, manufacturing cost and cash conversion; impressive demonstrations alone do not establish attractive shareholder returns.

Sources: S136, S137 | Valuation: V51

## Vishay Precision Group

VPG | NYSE | Stock | High risk

**Function and investment case.** VPG supplies the force, load and strain measurements that help machines interact safely with their surroundings. Its broader industrial customer base provides existing demand while robotics adds optionality.

**Evidence and finances / costs.** Q2 revenue increased 11.7% to $83.9m, but adjusted operating margin fell to 1.7%. Management disclosed a first humanoid customer nomination and a planned second-half ramp; this is not guaranteed sales.

**Valuation and growth conditions.** At 51.7x forward earnings, margin recovery and real production orders matter. Track design-win conversion, sensing content per robot, bookings and operating profit. Its correct listing is NYSE, rather than Nasdaq.

Sources: S138 | Valuation: V52

## FF EAI Robotics Ecosystem

FFR | NASDAQ | Stock | Very high risk

**Function and investment case.** Formerly AIxCrypto, FFR announced its current name and ticker in September 2026. The relevant robotics investment case depends on the proposed acquisition of FFAI's robotics business, rather than an established consolidated earnings record.

**Evidence and finances / costs.** October 12 definitive agreements were announced October 14. The issuer targeted an end-October closing; completion was not verified by this report's cutoff. The proposed all-stock structure leaves existing other shareholders at approximately 10.7% post-close.

**Valuation and growth conditions.** Do not treat company revenue targets as earned results or deal pricing as a stock-price target. Require closing filings, audited pro forma accounts, a credible cash runway and paid orders before relying on a growth valuation.

Sources: S139, S140

# Requested additions | Additional operating companies

Requested additions to physical AI and critical materials. These supplement the original seven-per-theme rankings.

## USA Rare Earth

USAR | NASDAQ | Stock | Very high risk

**Function and investment case.** USAR is more than a Round Top development story after completing the Serra Verde combination on September 3, 2026. The Brazilian operation adds upstream production, while downstream metal and magnet assets broaden potential value capture.

**Evidence and finances / costs.** The Q2 plan targeted a 600-tonne annualized Stillwater magnet capacity run rate in Q4. Capacity targets are not realized production or sales, and the Round Top feasibility timetable remains a separate development milestone.

**Valuation and growth conditions.** Use funded project economics and pro forma ownership, debt and cash rather than a trailing P/E. Monitor saleable output, magnet customer qualification, Serra Verde integration and financing terms.

Sources: S141, S142

## Energy Fuels

UUUU | NYSE American; EFR on TSX | Stock | Very high risk

**Function and investment case.** Energy Fuels combines uranium with rare-earth processing; it is not a pure rare-earth producer. White Mesa is central to the processing thesis, with magnet inputs serving motors, defense and industrial uses.

**Evidence and finances / costs.** Q2 revenue was $25.1m with a net loss. ASM was acquired in August 2026; the VAC acquisition remained pending, with Q1 2027 targeted. An October 26 Donald project financing milestone was conditional, not completed funding or operating production.

**Valuation and growth conditions.** Assess the combined financing plan, acquisition consideration and material-price sensitivity. Track NdPr output and customer specifications, and distinguish planned heavy-rare-earth capacity from delivered product.

Sources: S143, S144

# Requested additions | Semiconductor and critical-material ETFs

Sector baskets diversify individual-company exposure but retain common industry and commodity risks.

## iShares Semiconductor ETF

SOXX | NASDAQ | ETF | High risk

**Function and investment case.** SOXX is a semiconductor-sector basket, rather than a broad stock-market fund. It spreads issuer exposure across U.S.-listed semiconductor businesses while retaining concentrated industry demand.

**Evidence and finances / costs.** The issuer reports a 0.33% annual expense ratio. Index weights change, so the current holdings file should determine the actual mix of designers, manufacturers and equipment firms.

**Valuation and growth conditions.** A reasonable research starting point for chip breadth. Compare concentration and index rules with SMH and XSD; owning all three can add substantial overlap rather than independent growth drivers.

Sources: S145

## SPDR S&P Semiconductor ETF

XSD | NYSE Arca | ETF | High risk

**Function and investment case.** XSD tracks the S&P Semiconductor Select Industry Index using a modified equal-weight approach. It is not permanently identical weighting: prices move between rebalances and index rules apply.

**Evidence and finances / costs.** The issuer reports a 0.35% gross expense ratio and NYSE Arca listing. The approach gives smaller and mid-sized constituents more influence than a fund dominated by market-cap leaders.

**Valuation and growth conditions.** Prefer this structure when the thesis is broad chip-industry participation. It may lag when a few giants dominate returns; assess profitability and financing exposure across the smaller holdings.

Sources: S146

## VanEck Semiconductor ETF

SMH | NASDAQ | ETF | High risk

**Function and investment case.** SMH tracks the MVIS US Listed Semiconductor 25 Index. Its structure favors large semiconductor production and equipment businesses, including foreign companies with U.S.-listed shares.

**Evidence and finances / costs.** The issuer reports a 0.35% total expense ratio. NVIDIA and TSMC were major positions in the reviewed holdings, creating direct exposure to AI infrastructure and advanced fabrication.

**Valuation and growth conditions.** A practical large-platform alternative to selecting individual chip firms. Compare current top holdings and their prices with SOXX; it is not a hedge against semiconductor or Taiwan-related risk.

Sources: S147

# Requested additions | Semiconductor and critical-material ETFs

Sector baskets diversify individual-company exposure but retain common industry and commodity risks.

## VanEck Rare Earth and Strategic Metals ETF

REMX | NYSE Arca | ETF | High risk

**Function and investment case.** REMX offers strategic-metals equity exposure, not direct ownership of metal inventories. The basket can include more than rare-earth producers, so lithium and other commodity cycles may influence results.

**Evidence and finances / costs.** The May 2026 prospectus reports a 0.53% annual expense ratio. Constituents span producing, refining and recycling operations across several countries.

**Valuation and growth conditions.** Useful for reducing reliance on one mine or processing project. Inspect country and material weights before purchase; a rare-earth supply-security thesis does not guarantee favorable realized prices or fund returns.

Sources: S148, S149

## Global X Rare Earth & Critical Materials ETF

EART | NASDAQ | ETF | High risk

**Function and investment case.** EART was renamed from the Global X Disruptive Materials ETF, formerly DMAT, on March 1, 2026. Its mandate is wider than rare earths alone.

**Evidence and finances / costs.** The issuer reports a 0.59% total expense ratio. Eligible materials span rare earths, copper, lithium, graphite and other critical inputs used in motors, batteries, wiring and industrial systems.

**Valuation and growth conditions.** Compare actual country, company and commodity weights with REMX. Supply-chain relevance is attractive, but cyclical pricing and fund trading liquidity should determine whether the exposure fits the intended thesis.

Sources: S150

# Requested additions | Robotics and AI funds

BOTT is the Themes humanoid ETF. THNQ is a separate ROBO Global AI ETF. BOT is a closed-end fund, with different valuation and liquidity risks.

## RoboStrategy

BOT | NASDAQ | Closed-end fund | Very high risk

**Function and investment case.** BOT is a non-diversified closed-end management investment company, not an ETF. The September 30 portfolio disclosure listed positions in Figure AI and Apptronik alongside industrial and general-purpose robotics companies.

**Evidence and finances / costs.** The reviewed prospectus estimates total annual expenses at 3.98%, including a 2.50% management fee tied to gross assets. These are estimates, not a fixed all-in cap; private portfolio valuations are subjective.

**Valuation and growth conditions.** Compare the market price with the latest published NAV and its valuation date before considering entry. Check investment structures, dilution and any leverage. Access to private companies does not eliminate fees or liquidity-event risk.

Sources: S151, S152

## KraneShares Global Humanoid Robotics & Physical AI Index ETF

KOID | NASDAQ | ETF | High risk

**Function and investment case.** KOID follows a MerQube humanoid-robotics index spanning listed integrators and enabling suppliers. Public equity exposure should not be confused with direct ownership of every prominent private humanoid company.

**Evidence and finances / costs.** The August 1, 2026 prospectus lists 0.79% gross and 0.69% net annual expenses, with a 0.10-point waiver through August 1, 2028.

**Valuation and growth conditions.** A candidate for diversified access within the humanoid theme. Verify current holdings and country weights rather than assuming a specific company, such as Unitree, is included. Compare commercial robotics revenue with broader electronics exposure.

Sources: S153

## Private access and listed baskets behave differently

BOT adds private-company access and a potentially large gap between market price and NAV. KOID and BOTT hold listed equities under index rules. THNQ spans the wider AI economy. Compare current holdings and the actual revenue exposure before treating these funds as substitutes.

# Requested additions | Robotics and AI funds

BOTT is the Themes humanoid ETF. THNQ is a separate ROBO Global AI ETF. BOT is a closed-end fund, with different valuation and liquidity risks.

## Themes Humanoid Robotics ETF

BOTT | NASDAQ | ETF | High risk

**Function and investment case.** BOTT is the correct ticker for the Themes Humanoid Robotics ETF. It tracks the Solactive Global Humanoid Robotics Index, with exposure extending beyond dedicated humanoid manufacturers.

**Evidence and finances / costs.** The March 31, 2026 shareholder report shows a 0.35% annualized expense ratio. The index scope includes factory automation, chip suppliers and specialized components.

**Valuation and growth conditions.** This is a relatively low-cost option among the requested humanoid funds. Review current holdings, liquidity and the share of business actually linked to robotics; broad enabling companies may drive results more than humanoid shipments.

Sources: S154, S155

## ROBO Global Artificial Intelligence ETF

THNQ | NYSE Arca | ETF | High risk

**Function and investment case.** THNQ belongs to ROBO Global and is distinct from the Themes humanoid fund BOTT. Its AI index covers infrastructure and applications rather than providing pure humanoid-robot exposure.

**Evidence and finances / costs.** The August 28, 2026 prospectus lists 0.75% gross and 0.68% net annual expenses; the fee waiver runs through August 31, 2027.

**Valuation and growth conditions.** Useful when the intended exposure is the wider AI economy. Compare holdings with existing chip positions and other AI funds, and assess whether earnings growth can offset the entry valuation and recurring fee.

Sources: S156

# Priorities and entry discipline

The four most compelling combinations of existing economics and displayed valuation are TSMC, NVIDIA, General Dynamics and Regeneron. The next three research priorities for broader theme coverage are FANUC, Teledyne and Lynas. This is an ordered diligence queue, not an equal-weight recommendation.

| Research priority | What to verify before committing capital |
|---|---|
| TSMC / NVIDIA | Test the earnings case under slower AI spending and lower margins; accept that both carry substantial common customer-cycle exposure. |
| General Dynamics / Regeneron | Verify normalized free cash flow and the durability of the existing franchise; compare the price with conservative earnings assumptions. |
| FANUC / Teledyne | Check order durability, organic growth and returns on capital; require that the premium remains supported by cash generation. |
| Lynas / Albemarle / Neo | Use normalized material prices, include expansion spending, and distinguish saleable product from nameplate capacity. |
| AI-native biotech / direct autonomy | Size around financing and failure risk; require clinical evidence or funded production rather than relying on partnership ceilings and demonstrations. |

## How the additions affect the original selections

ABB is divesting Robotics to SoftBank; it is therefore a changing exposure rather than a stable long-term robotics proxy. The latest reviewed quarterly filing expected completion in Q4 2026. SoftBank itself introduces a much broader set of investment and financing exposures.

ABB transaction sources. S75, S76

AMD and Arm remain relevant businesses, but displayed forward P/Es of about 49x and 94x respectively set a higher hurdle than the selected large chip franchises. Tesla is now included in the requested additions. Its updated 189.9x forward earnings snapshot still requires substantial future success; it has not been moved into the original physical-AI top seven.

Peer valuation snapshots, retrieved October 27, 2026. S77, S78, S79

Red Cat offers more direct small-drone exposure, but was not preferred over the selected established platforms and component suppliers. Its negative earnings, limited operating history at scale and financing risk call for a different risk budget.

Red Cat snapshot. S80

# Valuation and concentration stress tests

A great business can produce a weak stock return if earnings disappoint or the valuation contracts. The simple illustration below assumes 10% annual EPS growth for five years and a 25x terminal P/E. It excludes dividends, tax, fees, dilution and changes in net cash. It is a mathematical sensitivity, not a forecast for any company.

| Entry P/E | Annualized price return | Five-year price return |
|---|---|---|
| 20x | 15.0% | 101.3% |
| 30x | 6.1% | 34.2% |
| 40x | 0.1% | 0.7% |
| 50x | -4.2% | -19.5% |

Calculation: annualized return = (1 + EPS growth) x (exit P/E / entry P/E)^(1/5) - 1. The same growth rate gives very different outcomes at different entry prices.

## Shared exposures across the expanded list

| Common driver | Where it appears | Portfolio implication |
|---|---|---|
| AI capital spending | NVIDIA, TSMC, ASML, Broadcom, KLA, SK hynix, Micron; also Teradyne | Seven tickers do not create seven independent demand drivers. |
| Factory investment | FANUC, Keyence, Yaskawa, Rockwell, Teradyne | Industrial recessions can pressure most names together. |
| Material prices and supply policy | Lynas, MP, Albemarle, Neo, Almonty | Prices, Chinese supply and government contracts can overwhelm volume growth. |
| Defense budgets and shipyard capacity | General Dynamics, HII, BAE, Curtiss-Wright, other defense suppliers | Order visibility does not eliminate shared funding or production risks. |
| Clinical evidence and capital markets | Insilico, Recursion, Generate, Absci; parts of Schrodinger | Several positions can be simultaneously exposed to trial setbacks and financing conditions. |

SOXX, SMH and XSD overlap the individual chip positions. KOID, BOTT and THNQ may also overlap them. REMX and EART can overlap materials companies. More tickers do not necessarily create more independent risk exposures.

## Refresh the research after the next releases

Teradyne Q3 was scheduled for October 27 after the U.S. market close; this report uses its verified Q2 results. KLA and SK hynix also had near-term releases pending in the reviewed material. L3Harris scheduled October 29 and General Dynamics October 30. These releases can change the rankings and valuation inputs. S81, S82, S83

# Valuation reference | 1 of 3

| BOT \| Closed-end fund | 3.98% estimated annual costs | S151 |
| KOID \| ETF | 0.69% net / 0.79% gross | S153 |
| BOTT \| ETF | 0.35% annual expense | S154 |
| THNQ \| ETF | 0.68% net / 0.75% gross | S156 |

October 27 vendor snapshots are not synchronized. N/M is not a claim of low valuation. Early autonomy and project developers require cash, dilution and commercial-scale analysis; forward P/E can depend on adjusted estimates.

KOID: 0.69% net versus 0.79% gross, waiver through August 1, 2028. THNQ: 0.68% net versus 0.75% gross, waiver through August 31, 2027. BOT: 3.98% estimated total annual expenses, including a 2.50% gross-assets management fee. Fees can change; spreads, commissions, taxes and foreign-exchange costs are additional. S153, S156, S151

# Sources and verification notes

Company financial releases, SEC filings, issuer presentations and government publications form the factual basis. Market valuation pages are linked as V01-V52 in the appendices and profiles. Buying-access labels link directly to public Robinhood security pages or broker policy/market-access documentation. All sources were retrieved October 27, 2026. Issuer outlook and capacity are expectations, not verified future outcomes.

The Lynas FY2026 issuer report was read from a filing reproduction because the company reporting page embedded a separate viewer. Reuters was used to corroborate SK hynix investment gains and industry expectations; reporting of the L3Harris IPO delay supplements the issuer disclosures. Figures were cross-checked selectively, not subjected to a full audit or a uniform SEC XBRL reconstruction.

Source labels are clickable. The analysis uses no future earnings release as a reported result. Some financial figures have different currency and reporting-period bases; each profile specifies its period and currency.

N/D = not displayed; N/M = not meaningful. * Debt/current component follows provider classification; not a complete maturity ladder. A latest annual value may repeat in the FY column.

## FINANCIAL STRENGTH: 97/100 | STRONG

| | |
|---|---|
| Profit / quality | 25 / 25 |
| Cash generation | 25 / 25 |
| Liquidity | 20 / 20 |
| Leverage / service | 19 / 20 |
| Allocation / dilution | 8 / 10 |

**Financial interpretation.** Recurring procedures and instruments support operating cash. Cash exceeds borrowings, but equipment leases and hospital purchasing cycles still require monitoring. Strong finances do not remove a premium valuation.

**Growth funding.** Existing cash generation and reserves can support investment; valuation still matters.

**Ratio cross-check.** Historical revenue CAGR 18.9% (two-year annual interval); current ratio 3.3x; net debt/EBITDA -0.9x; interest cover N/M. FCF margin 31.1% (TTM / Sep '26); OCF/NI 1.4x; diluted-share CAGR 0.8%. FCF less SBC proxy: USD 2.76B.

**PRICE-FUNDAMENTALS BALANCE: DEMANDING**
P/E 53.9x; P/FCF 43.1x
At least one earnings/cash multiple exceeds 40x; substantial durable growth is needed.

**Score / data adjustments.** No usable interest-expense ratio; net-cash balance receives a disclosed 4/5 fallback.

Income Sep '26; balance Sep '26; cash Sep '26. Implied from provider cash minus net cash because no numerical Total Debt was displayed.

| Goodwill | N/D | N/D | N/D | N/D |
| Other intangibles | 8,498 | 8,542 | 8,800 | 9,823 |

## CASH FLOW | funding and capital allocation

| Metric | Latest Mar '26 | FY 2026 Mar '26 | FY 2025 Mar '25 | FY 2024 Mar '24 |
|---|---|---|---|---|
| Operating cash | 250,896 | 250,896 | 255,273 | 171,764 |
| CapEx spend (absolute) | 21,181 | 21,181 | 40,805 | 53,884 |
| Free cash flow | 229,715 | 229,715 | 214,468 | 117,880 |
| Stock compensation | N/D | N/D | N/D | N/D |
| Common equity issued | N/D | N/D | N/D | N/D |
| Repurchases | -553 | -553 | -49,555 | -28,391 |
| Common dividends | -94,459 | -94,459 | -83,133 | -90,096 |

N/D = not displayed; N/M = not meaningful. * Debt/current component follows provider classification; not a complete maturity ladder. A latest annual value may repeat in the FY column.

## FINANCIAL STRENGTH: 96/100 | STRONG

| | |
|---|---|
| Profit / quality | 22 / 25 |
| Cash generation | 25 / 25 |
| Liquidity | 20 / 20 |
| Leverage / service | 19 / 20 |
| Allocation / dilution | 10 / 10 |

**Financial interpretation.** Cash reserves and a high equity base provide industrial-cycle resilience. Separate the automation order cycle from financial solvency; current cash-flow coverage uses the last available fiscal year, not an invented interim TTM.

**Growth funding.** Existing cash generation and reserves can support investment; valuation still matters.

**Ratio cross-check.** Historical revenue CAGR 3.9% (two-year annual interval); current ratio 6.5x; net debt/EBITDA -3.0x; interest cover N/M. FCF margin 26.8% (FY 2026 / Mar '26); OCF/NI 1.5x; diluted-share CAGR -0.9%.

**PRICE-FUNDAMENTALS BALANCE: CONDITIONAL**
P/E 27.6x; P/FCF 21.8x
Price support is mixed; growth, cash conversion and financing must justify the multiple.

**Score / data adjustments.** No usable interest-expense ratio; net-cash balance receives a disclosed 4/5 fallback. Cash scoring uses matched FY 2026 / Mar '26; latest income/cash statements have different dates.

Income Sep '26; balance Sep '26; cash Mar '26. Implied from provider cash minus net cash because no numerical Total Debt was displayed. Flow dates differ: cash scoring uses FY 2026 / Mar '26.

## CASH FLOW | funding and capital allocation

| Metric | Latest Mar '26 | FY 2026 Mar '26 | FY 2025 Mar '25 | FY 2024 Mar '24 |
|---|---|---|---|---|
| Operating cash | 430,680 | 430,680 | 409,522 | 387,916 |
| CapEx spend (absolute) | 28,371 | 28,371 | 14,342 | 12,492 |
| Free cash flow | 402,309 | 402,309 | 395,180 | 375,424 |
| Stock compensation | N/D | N/D | N/D | N/D |
| Common equity issued | N/D | N/D | N/D | N/D |
| Repurchases | -12.0 | -12.0 | -19.0 | -23.0 |
| Common dividends | -109,136 | -109,136 | -78,820 | -72,757 |

N/D = not displayed; N/M = not meaningful. * Debt/current component follows provider classification; not a complete maturity ladder. A latest annual value may repeat in the FY column.

## FINANCIAL STRENGTH: 98/100 | STRONG

| | |
|---|---|
| Profit / quality | 25 / 25 |
| Cash generation | 24 / 25 |
| Liquidity | 20 / 20 |
| Leverage / service | 19 / 20 |
| Allocation / dilution | 10 / 10 |

**Financial interpretation.** Large cash/investment reserves, high margins and little financing dependence support internal expansion. Industrial demand and valuation remain separate risks. Japanese reporting periods differ from U.S. calendar quarters.

**Growth funding.** Existing cash generation and reserves can support investment; valuation still matters.

**Ratio cross-check.** Historical revenue CAGR 9.9% (two-year annual interval); current ratio 11.9x; net debt/EBITDA N/M; interest cover N/M. FCF margin 34.4% (FY 2026 / Mar '26); OCF/NI 1.0x; diluted-share CAGR 0.0%.

**PRICE-FUNDAMENTALS BALANCE: DEMANDING**
P/E 39.3x; P/FCF 47.7x
At least one earnings/cash multiple exceeds 40x; substantial durable growth is needed.

**Score / data adjustments.** No usable interest-expense ratio; net-cash balance receives a disclosed 4/5 fallback. Cash scoring uses matched FY 2026 / Mar '26; latest income/cash statements have different dates.

Income Jun '26; balance Jun '26; cash Mar '26. Implied from provider cash minus net cash because no numerical Total Debt was displayed. Flow dates differ: cash scoring uses FY 2026 / Mar '26.

N/D = not displayed; N/M = not meaningful. * Debt/current component follows provider classification; not a complete maturity ladder. A latest annual value may repeat in the FY column.

## FINANCIAL STRENGTH: 78/100 | SOUND

| | |
|---|---|
| Profit / quality | 22 / 25 |
| Cash generation | 25 / 25 |
| Liquidity | 7 / 20 |
| Leverage / service | 14 / 20 |
| Allocation / dilution | 10 / 10 |

**Financial interpretation.** Cash conversion and service/software economics support debt service. Acquisition debt, pension obligations and customer capital-spending cycles limit the cushion; sustained free cash matters more than a one-quarter order rebound.

**Growth funding.** Existing cash generation and reserves can support investment; valuation still matters.

**Ratio cross-check.** Historical revenue CAGR -4.0% (two-year annual interval); current ratio 1.1x; net debt/EBITDA 1.5x; interest cover 12.9x. FCF margin 16.8% (TTM / Jun '26); OCF/NI 1.4x; diluted-share CAGR -1.3%. FCF less SBC proxy: USD 1.42B.

**PRICE-FUNDAMENTALS BALANCE: DEMANDING**
P/E 41.2x; P/FCF 32.4x
At least one earnings/cash multiple exceeds 40x; substantial durable growth is needed.

Income Jun '26; balance Jun '26; cash Jun '26. Provider Total Debt, generally including leases. Not total liabilities; bank deposits are separate.

| Stock compensation | N/D | N/D | N/D | N/D |
| Common equity issued | N/D | N/D | N/D | N/D |
| Repurchases | -3.0 | -2.0 | -9,401 | -603 |
| Common dividends | -17,696 | -17,670 | -17,285 | -16,764 |

N/D = not displayed; N/M = not meaningful. * Debt/current component follows provider classification; not a complete maturity ladder. A latest annual value may repeat in the FY column.

## FINANCIAL STRENGTH: 79/100 | SOUND

| | |
|---|---|
| Profit / quality | 19 / 25 |
| Cash generation | 18 / 25 |
| Liquidity | 15 / 20 |
| Leverage / service | 17 / 20 |
| Allocation / dilution | 10 / 10 |

**Financial interpretation.** The balance sheet carries more financing and working-capital exposure than cash-rich Japanese peers. ERP recovery and plant investment must convert orders into free cash; operating performance is more informative than currency gains.

**Growth funding.** Existing cash generation and reserves can support investment; valuation still matters.

**Ratio cross-check.** Historical revenue CAGR -3.0% (two-year annual interval); current ratio 2.4x; net debt/EBITDA 0.9x; interest cover 21.0x. FCF margin 4.7% (TTM / Aug '26); OCF/NI 2.3x; diluted-share CAGR -0.4%.

**PRICE-FUNDAMENTALS BALANCE: CONDITIONAL**
P/E 29.5x; P/FCF 39.1x
Price support is mixed; growth, cash conversion and financing must justify the multiple.

Income Aug '26; balance Aug '26; cash Aug '26. Provider Total Debt, generally including leases. Not total liabilities; bank deposits are separate.

## FINANCIAL STRENGTH: 61/100 | SOUND

| | |
|---|---|
| Profit / quality | 9 / 25 |
| Cash generation | 17 / 25 |
| Liquidity | 16 / 20 |
| Leverage / service | 19 / 20 |
| Allocation / dilution | 0 / 10 |

**Financial interpretation.** Cash generation benefits from customer advances and project working capital. It is not equivalent to distributable recurring profit. Customer concentration, the Up-C structure, minority interests and stock compensation complicate per-share economics.

**Growth funding.** Advances support funding, but cash is tied to future delivery obligations.

**Ratio cross-check.** Historical revenue CAGR 38.2% (two-year annual interval); current ratio 1.3x; net debt/EBITDA -30.4x; interest cover N/M. FCF margin 30.1% (TTM / Jun '26); OCF/NI 108.9x; diluted-share CAGR 30.5%. FCF less SBC proxy: USD 560.9M.

**PRICE-FUNDAMENTALS BALANCE: CONDITIONAL**
P/E N/M; P/FCF 29.6x
Only one meaningful earnings/cash multiple is available; the missing or negative counterpart limits price support.

Unusual gains, credits, advances, stock compensation or investment intensity limit direct multiple interpretation; see financial note.

**Score / data adjustments.** Cash subscore capped at 17/25 for advances, stock compensation, financial customer funds or nonrecurring effects. No usable interest-expense ratio; net-cash balance receives a disclosed 4/5 fallback.

Income Jun '26; balance Jun '26; cash Jun '26. Provider Total Debt, generally including leases. Not total liabilities; bank deposits are separate.

## CASH FLOW | funding and capital allocation

| Metric | Latest Jul '26 | FY 2026 Jan '26 | FY 2025 Jan '25 | FY 2024 Jan '24 |
|---|---|---|---|---|
| Operating cash | 134,360 | 102,718 | 64,089 | 28,090 |
| CapEx spend (absolute) | 7,354 | 6,042 | 3,236 | 1,069 |
| Free cash flow | 127,006 | 96,676 | 60,853 | 27,021 |
| Stock compensation | 7,241 | 6,386 | 4,737 | 3,549 |
| Common equity issued | 789 | 644 | 490 | 403 |
| Repurchases | -64,414 | -48,034 | -40,636 | -12,316 |
| Common dividends | -6,776 | -974 | -834 | -395 |

N/D = not displayed; N/M = not meaningful. * Debt/current component follows provider classification; not a complete maturity ladder. A latest annual value may repeat in the FY column.

## FINANCIAL STRENGTH: 97/100 | STRONG

| | |
|---|---|
| Profit / quality | 25 / 25 |
| Cash generation | 22 / 25 |
| Liquidity | 20 / 20 |
| Leverage / service | 20 / 20 |
| Allocation / dilution | 10 / 10 |

**Financial interpretation.** Operating profit is strong, but investment gains lift reported net income and receivables/inventory absorb cash. Debt and acquisition/intangible spending rose. Standard free cash flow excludes acquisitions and purchased intangibles.

**Growth funding.** Existing cash generation and reserves can support investment; valuation still matters.

**Ratio cross-check.** Historical revenue CAGR 88.3% (two-year annual interval); current ratio 4.6x; net debt/EBITDA -0.1x; interest cover 425.8x. FCF margin 41.9% (TTM / Jul '26); OCF/NI 0.7x; diluted-share CAGR -0.9%. FCF less SBC proxy: USD 119.77B.

**PRICE-FUNDAMENTALS BALANCE: DEMANDING**
P/E 27.3x; P/FCF 41.8x
At least one earnings/cash multiple exceeds 40x; substantial durable growth is needed.

Income Jul '26; balance Jul '26; cash Jul '26. Provider Total Debt, generally including leases. Not total liabilities; bank deposits are separate.

## FINANCIAL STRENGTH: 93/100 | STRONG

| | |
|---|---|
| Profit / quality | 25 / 25 |
| Cash generation | 22 / 25 |
| Liquidity | 16 / 20 |
| Leverage / service | 20 / 20 |
| Allocation / dilution | 10 / 10 |

**Financial interpretation.** High cash generation and customer prepayments support the business. Order timing, deposits, export constraints and qualification spending can make cash conversion unusually strong or weak in a given year.

**Growth funding.** Advances support funding, but cash is tied to future delivery obligations.

**Ratio cross-check.** Historical revenue CAGR 8.9% (two-year annual interval); current ratio 1.5x; net debt/EBITDA -0.7x; interest cover 128.6x. FCF margin 53.6% (TTM / Sep '26); OCF/NI 1.7x; diluted-share CAGR -0.6%. FCF less SBC proxy: EUR 20.94B.

**PRICE-FUNDAMENTALS BALANCE: DEMANDING**
P/E 42.6x; P/FCF 26.7x
At least one earnings/cash multiple exceeds 40x; substantial durable growth is needed.

Unusual gains, credits, advances, stock compensation or investment intensity limit direct multiple interpretation; see financial note.

**Score / data adjustments.** Cash subscore capped at 22/25 for advances, stock compensation, financial customer funds or nonrecurring effects.

Income Sep '26; balance Sep '26; cash Sep '26. Provider Total Debt, generally including leases. Not total liabilities; bank deposits are separate.

## FINANCIAL STRENGTH: 91/100 | STRONG

| | |
|---|---|
| Profit / quality | 23 / 25 |
| Cash generation | 20 / 25 |
| Liquidity | 20 / 20 |
| Leverage / service | 20 / 20 |
| Allocation / dilution | 8 / 10 |

**Financial interpretation.** Recent memory profits and cash are exceptionally strong. Stress prices, utilization and expansion spending rather than treating peak margins as permanent. KRW statements and the U.S. ADR share ratio are different measurement bases.

**Growth funding.** Existing cash generation and reserves can support investment; valuation still matters.

**Ratio cross-check.** Historical revenue CAGR 72.2% (two-year annual interval); current ratio 2.6x; net debt/EBITDA -0.5x; interest cover 167.8x. FCF margin 48.5% (TTM / Jun '26); OCF/NI 0.8x; diluted-share CAGR 1.7%. FCF less SBC proxy: KRW 91.41T.

**PRICE-FUNDAMENTALS BALANCE: CONDITIONAL**
P/E 6.5x; P/FCF 11.8x
Headline multiples have support, but commodity/memory-cycle earnings need normalization.

Commodity/memory cycle: latest earnings and FCF are not a normalized mid-cycle denominator.

Income Jun '26; balance Jun '26; cash Jun '26. Provider Total Debt, generally including leases. Not total liabilities; bank deposits are separate.

N/D = not displayed; N/M = not meaningful. * Debt/current component follows provider classification; not a complete maturity ladder. A latest annual value may repeat in the FY column.

## FINANCIAL STRENGTH: 82/100 | STRONG

| | |
|---|---|
| Profit / quality | 22 / 25 |
| Cash generation | 18 / 25 |
| Liquidity | 20 / 20 |
| Leverage / service | 19 / 20 |
| Allocation / dilution | 3 / 10 |

**Financial interpretation.** FY2026 operating recovery improved cash, but the cash increase also includes a large equity raise and short-term deposits. Do not label all reserve growth internally generated; rare-earth prices and expansion funding remain material.

**Growth funding.** Existing cash generation and reserves can support investment; valuation still matters.

**Ratio cross-check.** Historical revenue CAGR 45.3% (two-year annual interval); current ratio 9.3x; net debt/EBITDA N/M; interest cover N/M. FCF margin 14.4% (FY 2026 / Jun '26); OCF/NI 1.4x; diluted-share CAGR N/D. FCF less SBC proxy: AUD 126.3M.

**PRICE-FUNDAMENTALS BALANCE: DEMANDING**
P/E 52.9x; P/FCF 83.5x
At least one earnings/cash multiple exceeds 40x; substantial durable growth is needed.

Commodity/memory cycle: latest earnings and FCF are not a normalized mid-cycle denominator.

**Score / data adjustments.** No usable interest-expense ratio; net-cash balance receives a disclosed 4/5 fallback. Insufficient comparable diluted-share history: allocation receives a conservative 3/10, not a zero-dilution assumption.

Income Jun '26; balance Jun '26; cash Jun '26. Provider Total Debt, generally including leases. Not total liabilities; bank deposits are separate.

N/D = not displayed; N/M = not meaningful. * Debt/current component follows provider classification; not a complete maturity ladder. A latest annual value may repeat in the FY column.

## FINANCIAL STRENGTH: 52/100 | MIXED

| | |
|---|---|
| Profit / quality | 13 / 25 |
| Cash generation | 2 / 25 |
| Liquidity | 15 / 20 |
| Leverage / service | 12 / 20 |
| Allocation / dilution | 10 / 10 |

**Financial interpretation.** Magnet expansion and working capital have consumed cash despite an operating business. Funding capacity, European plant utilization and customer qualification matter more than headline revenue growth. Statements use USD, not the CAD share quote.

**Growth funding.** Reserves support investment, but current expansion consumes cash and may need financing.

**Ratio cross-check.** Historical revenue CAGR -8.5% (two-year annual interval); current ratio 2.1x; net debt/EBITDA 0.7x; interest cover N/M. FCF margin -18.0% (TTM / Jun '26); OCF/NI -52.1x; diluted-share CAGR -2.3%. FCF less SBC proxy: USD -116.7M. Static pre-commitment cash/burn: 11 months; not a solvency forecast.

**PRICE-FUNDAMENTALS BALANCE: DEMANDING**
P/E 527.5x; P/FCF N/M
Only one meaningful earnings/cash multiple is available; the missing or negative counterpart limits price support.

Commodity/memory cycle: latest earnings and FCF are not a normalized mid-cycle denominator.

Income Jun '26; balance Jun '26; cash Jun '26. Provider Total Debt, generally including leases. Not total liabilities; bank deposits are separate.

## CASH FLOW | funding and capital allocation

| Metric | Latest Jun '26 | FY 2025 Dec '25 | FY 2024 Dec '24 | FY 2023 Dec '23 |
|---|---|---|---|---|
| Operating cash | 27.4 | -19.1 | -7.5 | -11.7 |
| CapEx spend (absolute) | 82.9 | 60.9 | 36.2 | 17.5 |
| Free cash flow | -55.5 | -80.0 | -43.7 | -29.2 |
| Stock compensation | 8.2 | 11.1 | 2.7 | 1.1 |
| Common equity issued | 327 | 342 | 11.8 | 7.5 |
| Repurchases | N/D | N/D | N/D | N/D |
| Common dividends | N/D | N/D | N/D | N/D |

N/D = not displayed; N/M = not meaningful. * Debt/current component follows provider classification; not a complete maturity ladder. A latest annual value may repeat in the FY column.

## FINANCIAL STRENGTH: 44/100 | MIXED

| | |
|---|---|
| Profit / quality | 9 / 25 |
| Cash generation | 0 / 25 |
| Liquidity | 20 / 20 |
| Leverage / service | 15 / 20 |
| Allocation / dilution | 0 / 10 |

**Financial interpretation.** Reported net income is much higher than operating profit; nonoperating items and financing effects are material. Tungsten expansion is still consuming cash. Cash raised, project debt and commissioning costs must be evaluated together.

**Growth funding.** Reserves support investment, but current expansion consumes cash and may need financing.

**Ratio cross-check.** Historical revenue CAGR 20.2% (two-year annual interval); current ratio 9.6x; net debt/EBITDA -80.6x; interest cover 0.6x. FCF margin -64.7% (TTM / Jun '26); OCF/NI 0.3x; diluted-share CAGR 17.4%. FCF less SBC proxy: CAD -63.7M. Static pre-commitment cash/burn: 265 months; not a solvency forecast.

**PRICE-FUNDAMENTALS BALANCE: NOT ESTABLISHED**
EV/sales 39.1x; earnings/FCF N/M
Positive recurring earnings and residual free cash do not jointly support a current valuation comparison.

Commodity/memory cycle: latest earnings and FCF are not a normalized mid-cycle denominator. Unusual gains, credits, advances, stock compensation or investment intensity limit direct multiple interpretation; see financial note.

**Score / data adjustments.** Earnings-quality subscore capped at 0/4; see company interpretation.

Income Jun '26; balance Jun '26; cash Jun '26. Provider Total Debt, generally including leases. Not total liabilities; bank deposits are separate.

## FINANCIAL STRENGTH: 100/100 | STRONG

| | |
|---|---|
| Profit / quality | 25 / 25 |
| Cash generation | 25 / 25 |
| Liquidity | 20 / 20 |
| Leverage / service | 20 / 20 |
| Allocation / dilution | 10 / 10 |

**Financial interpretation.** Established products generate substantial cash and fund research. Liquidity is strong, but product concentration, competitive erosion, collaboration accounting and pipeline spending determine the durability of that cash.

**Growth funding.** Existing cash generation and reserves can support investment; valuation still matters.

**Ratio cross-check.** Historical revenue CAGR 4.6% (two-year annual interval); current ratio 3.3x; net debt/EBITDA -3.2x; interest cover 75.3x. FCF margin 24.2% (TTM / Jun '26); OCF/NI 1.1x; diluted-share CAGR -2.2%. FCF less SBC proxy: USD 2.77B.

**PRICE-FUNDAMENTALS BALANCE: SUPPORTED**
P/E 20.2x; P/FCF 21.7x
Both reported earnings and FCF multiples are at or below 25x, with at least sound financial strength.

Income Jun '26; balance Jun '26; cash Jun '26. Provider Total Debt, generally including leases. Not total liabilities; bank deposits are separate.

## FINANCIAL STRENGTH: 48/100 | MIXED

| | |
|---|---|
| Profit / quality | 2 / 25 |
| Cash generation | 2 / 25 |
| Liquidity | 20 / 20 |
| Leverage / service | 19 / 20 |
| Allocation / dilution | 5 / 10 |

**Financial interpretation.** Software/licensing and discovery transactions can make results and cash receipts lumpy. Evaluate recurring software cash separately from milestones, asset sales and collaboration financing; development spending still consumes liquidity.

**Growth funding.** Reserves support investment, but current expansion consumes cash and may need financing.

**Ratio cross-check.** Historical revenue CAGR 8.7% (two-year annual interval); current ratio 2.7x; net debt/EBITDA N/M; interest cover N/M. FCF margin -50.3% (TTM / Jun '26); OCF/NI N/M; diluted-share CAGR -1.3%. FCF less SBC proxy: USD -168.9M. Static pre-commitment cash/burn: 38 months; not a solvency forecast.

**PRICE-FUNDAMENTALS BALANCE: NOT ESTABLISHED**
EV/sales 6.5x; earnings/FCF N/M
Current operations do not establish recurring operating profit; price relies on future commercialization or a turnaround.

**Score / data adjustments.** No usable interest-expense ratio; net-cash balance receives a disclosed 4/5 fallback.

## FINANCIAL STRENGTH: 27/100 | WEAK

| | |
|---|---|
| Profit / quality | 0 / 25 |
| Cash generation | 0 / 25 |
| Liquidity | 10 / 20 |
| Leverage / service | 15 / 20 |
| Allocation / dilution | 2 / 10 |

**Financial interpretation.** The available public financial history is shorter than three full fiscal years. Cash funds clinical and platform development, while continuing losses and future trial costs constrain internal funding. IPO cash is financing, not operating success.

**Growth funding.** Growth depends on cash-burn reduction, financing or operating improvement; dilution can absorb upside.

**Ratio cross-check.** Historical revenue CAGR N/D (two-year annual interval); current ratio 8.3x; net debt/EBITDA N/M; interest cover -328.1x. FCF margin -922.8% (TTM / Jun '26); OCF/NI N/M; diluted-share CAGR N/D. FCF less SBC proxy: USD -269.3M. Static pre-commitment cash/burn: 22 months; not a solvency forecast.

**PRICE-FUNDAMENTALS BALANCE: NOT ESTABLISHED**
EV/sales N/M; earnings/FCF N/M
Current operations do not establish recurring operating profit; price relies on future commercialization or a turnaround.

**Score / data adjustments.** Insufficient comparable diluted-share history: allocation receives a conservative 3/10, not a zero-dilution assumption. Short public financial history limits persistence evidence; missing years earn no consistency points.

## FINANCIAL STRENGTH: 81/100 | STRONG

| | |
|---|---|
| Profit / quality | 19 / 25 |
| Cash generation | 22 / 25 |
| Liquidity | 13 / 20 |
| Leverage / service | 17 / 20 |
| Allocation / dilution | 10 / 10 |

**Financial interpretation.** Defense and aerospace cash generation supports debt service and dividends. Advance payments, contract assets, Gulfstream deliveries and pension requirements can shift cash between periods without equivalent changes in underlying profitability.

**Growth funding.** Existing cash generation and reserves can support investment; valuation still matters.

**Ratio cross-check.** Historical revenue CAGR 11.5% (two-year annual interval); current ratio 1.4x; net debt/EBITDA 0.8x; interest cover 16.6x. FCF margin 11.7% (TTM / Jul '26); OCF/NI 1.7x; diluted-share CAGR -0.7%. FCF less SBC proxy: USD 6.22B.

**PRICE-FUNDAMENTALS BALANCE: SUPPORTED**
P/E 21.6x; P/FCF 14.9x
Both reported earnings and FCF multiples are at or below 25x, with at least sound financial strength.

Income Jul '26; balance Jul '26; cash Jul '26. Provider Total Debt, generally including leases. Not total liabilities; bank deposits are separate.

| Repurchases | N/D | -50.0 | -444 | -12,870 |
| Common dividends | -3,796 | -3,574 | -3,217 | -3,239 |

N/D = not displayed; N/M = not meaningful. * Debt/current component follows provider classification; not a complete maturity ladder. A latest annual value may repeat in the FY column.

## FINANCIAL STRENGTH: 71/100 | SOUND

| | |
|---|---|
| Profit / quality | 19 / 25 |
| Cash generation | 22 / 25 |
| Liquidity | 7 / 20 |
| Leverage / service | 13 / 20 |
| Allocation / dilution | 10 / 10 |

**Financial interpretation.** Broad cash generation supports debt and investment, but engine remediation, warranty provisions and program execution can create cash claims beyond the current income statement. Track cash after these obligations and CapEx.

**Growth funding.** Existing cash generation and reserves can support investment; valuation still matters.

**Ratio cross-check.** Historical revenue CAGR 13.4% (two-year annual interval); current ratio 1.0x; net debt/EBITDA 1.8x; interest cover 7.8x. FCF margin 9.9% (TTM / Sep '26); OCF/NI 1.5x; diluted-share CAGR -2.8%. FCF less SBC proxy: USD 8.25B.

**PRICE-FUNDAMENTALS BALANCE: CONDITIONAL**
P/E 32.1x; P/FCF 27.6x
Price support is mixed; growth, cash conversion and financing must justify the multiple.

## FINANCIAL STRENGTH: 74/100 | SOUND

| | |
|---|---|
| Profit / quality | 19 / 25 |
| Cash generation | 22 / 25 |
| Liquidity | 10 / 20 |
| Leverage / service | 13 / 20 |
| Allocation / dilution | 10 / 10 |

**Financial interpretation.** Cash generation supports distributions, though buybacks and debt reduce balance-sheet room. Fixed-price program losses and pension items require separate attention; accounting profit is not a guarantee of program cash.

**Growth funding.** Existing cash generation and reserves can support investment; valuation still matters.

**Ratio cross-check.** Historical revenue CAGR 5.4% (two-year annual interval); current ratio 1.3x; net debt/EBITDA 1.5x; interest cover 7.9x. FCF margin 10.6% (TTM / Sep '26); OCF/NI 1.6x; diluted-share CAGR -3.4%. FCF less SBC proxy: USD 8.02B.

**PRICE-FUNDAMENTALS BALANCE: SUPPORTED**
P/E 22.4x; P/FCF 17.2x
Both reported earnings and FCF multiples are at or below 25x, with at least sound financial strength.

Income Sep '26; balance Sep '26; cash Sep '26. Provider Total Debt, generally including leases. Not total liabilities; bank deposits are separate.

| Book equity | 20,850 | 19,635 | 19,579 | 18,829 |
| Goodwill | 19,996 | 20,010 | 20,325 | 19,979 |
| Other intangibles | 6,540 | 6,509 | 7,639 | 8,540 |

## CASH FLOW | funding and capital allocation

| Metric | Latest Jul '26 | FY 2025 Jan '26 | FY 2024 Jan '25 | FY 2023 Dec '23 |
|---|---|---|---|---|
| Operating cash | 3,292 | 3,106 | 2,559 | 2,096 |
| CapEx spend (absolute) | 484 | 424 | 408 | 449 |
| Free cash flow | 2,808 | 2,682 | 2,151 | 1,647 |
| Stock compensation | 338 | 366 | 361 | 320 |
| Common equity issued | N/D | N/D | N/D | N/D |
| Repurchases | -857 | -1,154 | -554 | -518 |
| Common dividends | -920 | -903 | -886 | -868 |

N/D = not displayed; N/M = not meaningful. * Debt/current component follows provider classification; not a complete maturity ladder. A latest annual value may repeat in the FY column.

## FINANCIAL STRENGTH: 71/100 | SOUND

| | |
|---|---|
| Profit / quality | 19 / 25 |
| Cash generation | 22 / 25 |
| Liquidity | 7 / 20 |
| Leverage / service | 13 / 20 |
| Allocation / dilution | 10 / 10 |

**Financial interpretation.** Acquisition debt and goodwill accompany durable defense demand. Debt reduction should come from cash after investment and integration costs, not only adjusted EBITDA. Divestitures and separation terms can change the profile.

**Growth funding.** Existing cash generation and reserves can support investment; valuation still matters.

**Ratio cross-check.** Historical revenue CAGR 6.1% (two-year annual interval); current ratio 1.2x; net debt/EBITDA 2.3x; interest cover 5.3x. FCF margin 12.2% (TTM / Jul '26); OCF/NI 1.8x; diluted-share CAGR -0.8%. FCF less SBC proxy: USD 2.47B.

**PRICE-FUNDAMENTALS BALANCE: CONDITIONAL**
P/E 26.2x; P/FCF 17.2x
Price support is mixed; growth, cash conversion and financing must justify the multiple.

Income Jul '26; balance Jul '26; cash Jul '26. Provider Total Debt, generally including leases. Not total liabilities; bank deposits are separate.

| Stock compensation | N/D | N/D | N/D | N/D |
| Common equity issued | N/D | N/D | N/D | 113 |
| Repurchases | N/D | N/D | N/D | N/D |
| Common dividends | -535 | -369 | -248 | -187 |

N/D = not displayed; N/M = not meaningful. * Debt/current component follows provider classification; not a complete maturity ladder. A latest annual value may repeat in the FY column.

## FINANCIAL STRENGTH: 48/100 | MIXED

| | |
|---|---|
| Profit / quality | 22 / 25 |
| Cash generation | 18 / 25 |
| Liquidity | 5 / 20 |
| Leverage / service | 0 / 20 |
| Allocation / dilution | 3 / 10 |

**Financial interpretation.** Rapid defense growth requires working capital and capacity spending. Customer advances, acquisition financing and minority interests affect equity cash. Contracted demand is valuable, but backlog alone does not finance every expansion.

**Growth funding.** Some internal growth funding; leverage, cash quality or allocation reduces flexibility.

**Ratio cross-check.** Historical revenue CAGR 17.7% (two-year annual interval); current ratio 1.0x; net debt/EBITDA N/M; interest cover N/M. FCF margin 3.4% (TTM / Jun '26); OCF/NI 1.8x; diluted-share CAGR N/D.

**PRICE-FUNDAMENTALS BALANCE: DEMANDING**
P/E 65.5x; P/FCF 122.4x
At least one earnings/cash multiple exceeds 40x; substantial durable growth is needed.

**Score / data adjustments.** Insufficient comparable diluted-share history: allocation receives a conservative 3/10, not a zero-dilution assumption.

Income Jun '26; balance Jun '26; cash Jun '26. Provider Total Debt, generally including leases. Not total liabilities; bank deposits are separate.

## BALANCE | claims and liquidity

| Metric | Latest Jun '26 | FY 2025 Dec '25 | FY 2024 Dec '24 | FY 2023 Dec '23 |
|---|---|---|---|---|
| Cash + short investments | 270 | 647 | 598 | 467 |
| Total debt incl. leases* | 267 | 470 | 458 | 497 |
| Reported current debt* | N/D | 11.0 | 11.0 | 12.0 |
| Assets | 4,197 | 4,486 | 4,184 | 3,921 |
| Liabilities | 1,394 | 1,756 | 1,627 | 1,596 |
| Book equity | 2,803 | 2,730 | 2,557 | 2,325 |
| Goodwill | 1,238 | 1,238 | 1,238 | 1,238 |
| Other intangibles | 100 | 112 | 132 | 151 |

## CASH FLOW | funding and capital allocation

| Metric | Latest Jun '26 | FY 2025 Dec '25 | FY 2024 Dec '24 | FY 2023 Dec '23 |
|---|---|---|---|---|
| Operating cash | 501 | 366 | 271 | 205 |
| CapEx spend (absolute) | 138 | 139 | 85.0 | 60.0 |
| Free cash flow | 363 | 227 | 186 | 145 |
| Stock compensation | 29.0 | 32.0 | 22.0 | 17.0 |
| Common equity issued | 11.0 | 9.0 | 16.0 | 12.0 |
| Repurchases | -62.0 | -56.0 | -19.0 | -1.0 |
| Common dividends | -96.0 | -96.0 | N/D | N/D |

N/D = not displayed; N/M = not meaningful. * Debt/current component follows provider classification; not a complete maturity ladder. A latest annual value may repeat in the FY column.

## FINANCIAL STRENGTH: 82/100 | STRONG

| | |
|---|---|
| Profit / quality | 19 / 25 |
| Cash generation | 22 / 25 |
| Liquidity | 13 / 20 |
| Leverage / service | 20 / 20 |
| Allocation / dilution | 8 / 10 |

**Financial interpretation.** Operating cash and manageable financing support defense-electronics growth. Contract assets, customer concentration, government timing and the controlling shareholder remain relevant to cash available to public investors.

**Growth funding.** Existing cash generation and reserves can support investment; valuation still matters.

**Ratio cross-check.** Historical revenue CAGR 13.6% (two-year annual interval); current ratio 1.9x; net debt/EBITDA -0.0x; interest cover 80.0x. FCF margin 9.6% (TTM / Jun '26); OCF/NI 1.6x; diluted-share CAGR 0.9%. FCF less SBC proxy: USD 334.0M.

**PRICE-FUNDAMENTALS BALANCE: CONDITIONAL**
P/E 29.8x; P/FCF 26.2x
Price support is mixed; growth, cash conversion and financing must justify the multiple.

Income Jun '26; balance Jun '26; cash Jun '26. Provider Total Debt, generally including leases. Not total liabilities; bank deposits are separate.

N/D = not displayed; N/M = not meaningful. * Debt/current component follows provider classification; not a complete maturity ladder. A latest annual value may repeat in the FY column.

## FINANCIAL STRENGTH: 52/100 | MIXED

| | |
|---|---|
| Profit / quality | 13 / 25 |
| Cash generation | 2 / 25 |
| Liquidity | 20 / 20 |
| Leverage / service | 17 / 20 |
| Allocation / dilution | 0 / 10 |

**Financial interpretation.** Cash raised provides development capacity, but current investment consumes cash. Production programs need to fund themselves over time; bookings and high equity value do not replace profitable delivery economics.

**Growth funding.** Reserves support investment, but current expansion consumes cash and may need financing.

**Ratio cross-check.** Historical revenue CAGR 14.0% (two-year annual interval); current ratio 5.5x; net debt/EBITDA -14.3x; interest cover 3.1x. FCF margin -8.5% (TTM / Jun '26); OCF/NI -1.3x; diluted-share CAGR 12.7%. FCF less SBC proxy: USD -178.4M. Static pre-commitment cash/burn: 134 months; not a solvency forecast.

**PRICE-FUNDAMENTALS BALANCE: DEMANDING**
P/E 241.8x; P/FCF N/M
Only one meaningful earnings/cash multiple is available; the missing or negative counterpart limits price support.

Income Jun '26; balance Jun '26; cash Jun '26. Provider Total Debt, generally including leases. Not total liabilities; bank deposits are separate.

## FINANCIAL STRENGTH: 18/100 | FRAGILE

| | |
|---|---|
| Profit / quality | 0 / 25 |
| Cash generation | 0 / 25 |
| Liquidity | 0 / 20 |
| Leverage / service | 15 / 20 |
| Allocation / dilution | 3 / 10 |

**Financial interpretation.** The financial history is that of the predecessor vehicle before the proposed robotics combination. Tiny cash, losses, transaction funding and dilution make a consolidated future robotics valuation especially uncertain.

**Growth funding.** Growth depends on cash-burn reduction, financing or operating improvement; dilution can absorb upside.

**Ratio cross-check.** Historical revenue CAGR N/D (two-year annual interval); current ratio 3.7x; net debt/EBITDA N/M; interest cover -15.1x. FCF margin N/D (TTM / Jun '26); OCF/NI N/M; diluted-share CAGR N/D. FCF less SBC proxy: USD -12.2M. Static pre-commitment cash/burn: 1 months; not a solvency forecast.

**PRICE-FUNDAMENTALS BALANCE: NOT ESTABLISHED**
EV/sales N/M; earnings/FCF N/M
Current operations do not establish recurring operating profit; price relies on future commercialization or a turnaround.

**Score / data adjustments.** Insufficient comparable diluted-share history: allocation receives a conservative 3/10, not a zero-dilution assumption.

Income Jun '26; balance Jun '26; cash Jun '26. Implied from provider cash minus net cash because no numerical Total Debt was displayed.

## FINANCIAL STRENGTH: 35/100 | WEAK

| | |
|---|---|
| Profit / quality | 0 / 25 |
| Cash generation | 0 / 25 |
| Liquidity | 20 / 20 |
| Leverage / service | 15 / 20 |
| Allocation / dilution | 0 / 10 |

**Financial interpretation.** Cash growth is primarily financing-related while mining/magnet expansion consumes cash. Acquisition integration, project spending, warrants and equity issuance determine the value retained by the current share.

**Growth funding.** Growth depends on cash-burn reduction, financing or operating improvement; dilution can absorb upside.

**Ratio cross-check.** Historical revenue CAGR N/D (two-year annual interval); current ratio 32.8x; net debt/EBITDA N/M; interest cover -594.8x. FCF margin -1865.7% (TTM / Jun '26); OCF/NI N/M; diluted-share CAGR 49.2%. FCF less SBC proxy: USD -264.0M. Static pre-commitment cash/burn: 75 months; not a solvency forecast.

**PRICE-FUNDAMENTALS BALANCE: NOT ESTABLISHED**
EV/sales 180.4x; earnings/FCF N/M
Current operations do not establish recurring operating profit; price relies on future commercialization or a turnaround.

Income Jun '26; balance Jun '26; cash Jun '26. Provider Total Debt, generally including leases. Not total liabilities; bank deposits are separate.

## FINANCIAL STRENGTH: 90/100 | STRONG

| | |
|---|---|
| Profit / quality | 21 / 25 |
| Cash generation | 19 / 25 |
| Liquidity | 20 / 20 |
| Leverage / service | 20 / 20 |
| Allocation / dilution | 10 / 10 |

**Financial interpretation.** Large investment gains lift net income far above operating earnings; cash is the better operating cross-check. AI CapEx, debt, preferred-capital commitments and acquisitions reduce freely deployable reserves despite a strong core franchise.

**Growth funding.** Existing cash generation and reserves can support investment; valuation still matters.

**Ratio cross-check.** Historical revenue CAGR 14.5% (two-year annual interval); current ratio 2.7x; net debt/EBITDA -0.7x; interest cover 65.6x. FCF margin 11.9% (TTM / Jun '26); OCF/NI 0.8x; diluted-share CAGR -2.0%. FCF less SBC proxy: USD 25.13B.

**PRICE-FUNDAMENTALS BALANCE: DEMANDING**
P/E 16.3x; P/FCF 74.3x
At least one earnings/cash multiple exceeds 40x; substantial durable growth is needed.

Unusual gains, credits, advances, stock compensation or investment intensity limit direct multiple interpretation; see financial note.

**Score / data adjustments.** Earnings-quality subscore capped at 0/4; see company interpretation.

Income Jun '26; balance Jun '26; cash Jun '26. Provider Total Debt, generally including leases. Not total liabilities; bank deposits are separate.

## FINANCIAL STRENGTH: 64/100 | SOUND

| | |
|---|---|
| Profit / quality | 16 / 25 |
| Cash generation | 10 / 25 |
| Liquidity | 13 / 20 |
| Leverage / service | 17 / 20 |
| Allocation / dilution | 8 / 10 |

**Financial interpretation.** Operating cash is strong, but AI infrastructure and lease commitments have absorbed it and free cash recently turned negative. Investment gains also inflate reported profit. Separate retail/AWS operating economics from securities revaluations.

**Growth funding.** Reserves support investment, but current expansion consumes cash and may need financing.

**Ratio cross-check.** Historical revenue CAGR 11.7% (two-year annual interval); current ratio 1.0x; net debt/EBITDA 0.8x; interest cover 28.1x. FCF margin -1.5% (TTM / Jun '26); OCF/NI 1.2x; diluted-share CAGR 1.6%. FCF less SBC proxy: USD -30.94B. Static pre-commitment cash/burn: 127 months; not a solvency forecast.

**PRICE-FUNDAMENTALS BALANCE: CONDITIONAL**
P/E 20.4x; P/FCF N/M
Only one meaningful earnings/cash multiple is available; the missing or negative counterpart limits price support.

Unusual gains, credits, advances, stock compensation or investment intensity limit direct multiple interpretation; see financial note.

**Score / data adjustments.** Earnings-quality subscore capped at 1/4; see company interpretation.

## FINANCIAL STRENGTH: 96/100 | STRONG

| | |
|---|---|
| Profit / quality | 22 / 25 |
| Cash generation | 25 / 25 |
| Liquidity | 20 / 20 |
| Leverage / service | 19 / 20 |
| Allocation / dilution | 10 / 10 |

**Financial interpretation.** Cash and relatively light financing support machine-vision development. High gross margins help, but factory cycles, inventory and customer spending can constrain growth despite balance-sheet capacity.

**Growth funding.** Existing cash generation and reserves can support investment; valuation still matters.

**Ratio cross-check.** Historical revenue CAGR 9.0% (two-year annual interval); current ratio 3.9x; net debt/EBITDA -1.2x; interest cover N/M. FCF margin 24.6% (TTM / Jul '26); OCF/NI 1.6x; diluted-share CAGR -1.2%. FCF less SBC proxy: USD 218.9M.

**PRICE-FUNDAMENTALS BALANCE: DEMANDING**
P/E 55.8x; P/FCF 36.3x
At least one earnings/cash multiple exceeds 40x; substantial durable growth is needed.

**Score / data adjustments.** No usable interest-expense ratio; net-cash balance receives a disclosed 4/5 fallback.

Income Jul '26; balance Jul '26; cash Jul '26. Provider Total Debt, generally including leases. Not total liabilities; bank deposits are separate.

## FINANCIAL STRENGTH: 39/100 | WEAK

| | |
|---|---|
| Profit / quality | 0 / 25 |
| Cash generation | 0 / 25 |
| Liquidity | 20 / 20 |
| Leverage / service | 19 / 20 |
| Allocation / dilution | 0 / 10 |

**Financial interpretation.** Revenue growth has not yet eliminated cash burn. Cash can fund development, but stock compensation, acquisition spending and further dilution matter. A slower volume ramp or larger CapEx would shorten the simple runway estimate.

**Growth funding.** Growth depends on cash-burn reduction, financing or operating improvement; dilution can absorb upside.

**Ratio cross-check.** Historical revenue CAGR 42.6% (two-year annual interval); current ratio 4.2x; net debt/EBITDA N/M; interest cover N/M. FCF margin -40.2% (TTM / Jun '26); OCF/NI N/M; diluted-share CAGR 23.0%. FCF less SBC proxy: USD -120.4M. Static pre-commitment cash/burn: 38 months; not a solvency forecast.

**PRICE-FUNDAMENTALS BALANCE: NOT ESTABLISHED**
EV/sales 9.3x; earnings/FCF N/M
Current operations do not establish recurring operating profit; price relies on future commercialization or a turnaround.

**Score / data adjustments.** No usable interest-expense ratio; net-cash balance receives a disclosed 4/5 fallback.

## FINANCIAL STRENGTH: 95/100 | STRONG

| | |
|---|---|
| Profit / quality | 22 / 25 |
| Cash generation | 25 / 25 |
| Liquidity | 20 / 20 |
| Leverage / service | 20 / 20 |
| Allocation / dilution | 8 / 10 |

**Financial interpretation.** Growing operating cash and a net-cash position support product investment. Stock compensation, acquisitions, receivables and advanced-chip supply commitments affect how much operating growth reaches each share.

**Growth funding.** Existing cash generation and reserves can support investment; valuation still matters.

**Ratio cross-check.** Historical revenue CAGR 23.6% (two-year annual interval); current ratio 2.6x; net debt/EBITDA -0.9x; interest cover 44.5x. FCF margin 20.3% (TTM / Jun '26); OCF/NI 1.6x; diluted-share CAGR 0.3%. FCF less SBC proxy: USD 6.51B.

**PRICE-FUNDAMENTALS BALANCE: DEMANDING**
P/E 146.4x; P/FCF 109.5x
At least one earnings/cash multiple exceeds 40x; substantial durable growth is needed.

Income Jun '26; balance Jun '26; cash Jun '26. Provider Total Debt, generally including leases. Not total liabilities; bank deposits are separate.

## CASH FLOW | funding and capital allocation

| Metric | Latest Sep '26 | FY 2026 Jun '26 | FY 2025 Jun '25 | FY 2024 Jun '24 |
|---|---|---|---|---|
| Operating cash | 877 | 887 | 547 | 497 |
| CapEx spend (absolute) | 101 | 107 | 65.6 | 63.7 |
| Free cash flow | 776 | 780 | 481 | 434 |
| Stock compensation | 86.5 | 79.5 | 60.2 | 53.9 |
| Common equity issued | 14.6 | 14.4 | 13.7 | 11.3 |
| Repurchases | -51.4 | -51.2 | -207 | -182 |
| Common dividends | N/D | N/D | N/D | N/D |

N/D = not displayed; N/M = not meaningful. * Debt/current component follows provider classification; not a complete maturity ladder. A latest annual value may repeat in the FY column.

## FINANCIAL STRENGTH: 63/100 | SOUND

| | |
|---|---|
| Profit / quality | 19 / 25 |
| Cash generation | 22 / 25 |
| Liquidity | 10 / 20 |
| Leverage / service | 2 / 20 |
| Allocation / dilution | 10 / 10 |

**Financial interpretation.** Acquisition leverage is substantial relative to cash even with positive operating cash. Debt repayment, interest coverage, integration and organic growth should support each share rather than only reported revenue scale.

**Growth funding.** Some internal growth funding; leverage, cash quality or allocation reduces flexibility.

**Ratio cross-check.** Historical revenue CAGR 11.8% (two-year annual interval); current ratio 1.6x; net debt/EBITDA 4.0x; interest cover 4.0x. FCF margin 8.0% (TTM / Sep '26); OCF/NI 1.6x; diluted-share CAGR -2.2%. FCF less SBC proxy: USD 689.4M.

**PRICE-FUNDAMENTALS BALANCE: CONDITIONAL**
P/E 27.3x; P/FCF 19.1x
Price support is mixed; growth, cash conversion and financing must justify the multiple.

Income Sep '26; balance Sep '26; cash Sep '26. Provider Total Debt, generally including leases. Not total liabilities; bank deposits are separate.

## FINANCIAL STRENGTH: 35/100 | WEAK

| | |
|---|---|
| Profit / quality | 0 / 25 |
| Cash generation | 0 / 25 |
| Liquidity | 16 / 20 |
| Leverage / service | 19 / 20 |
| Allocation / dilution | 0 / 10 |

**Financial interpretation.** Recent equity financing strengthens liquidity, but operating cash burn and share issuance are large. Orders must become profitable production; current cash does not establish a repeatable manufacturing cash engine.

**Growth funding.** Growth depends on cash-burn reduction, financing or operating improvement; dilution can absorb upside.

**Ratio cross-check.** Historical revenue CAGR 51.1% (two-year annual interval); current ratio 14.9x; net debt/EBITDA N/M; interest cover N/M. FCF margin -220.4% (TTM / Jun '26); OCF/NI N/M; diluted-share CAGR 28.5%. FCF less SBC proxy: USD -174.5M. Static pre-commitment cash/burn: 25 months; not a solvency forecast.

**PRICE-FUNDAMENTALS BALANCE: NOT ESTABLISHED**
EV/sales 5.0x; earnings/FCF N/M
Current operations do not establish recurring operating profit; price relies on future commercialization or a turnaround.

**Score / data adjustments.** No usable interest-expense ratio; net-cash balance receives a disclosed 4/5 fallback.

Income Jun '26; balance Jun '26; cash Jun '26. Provider Total Debt, generally including leases. Not total liabilities; bank deposits are separate.

N/D = not displayed; N/M = not meaningful. * Debt/current component follows provider classification; not a complete maturity ladder. A latest annual value may repeat in the FY column.

## FINANCIAL STRENGTH: 35/100 | WEAK

| | |
|---|---|
| Profit / quality | 0 / 25 |
| Cash generation | 0 / 25 |
| Liquidity | 20 / 20 |
| Leverage / service | 15 / 20 |
| Allocation / dilution | 0 / 10 |

**Financial interpretation.** Warrant/fair-value and acquisition effects make net income a poor measure of operating performance. Cash is heavily financed, with restricted-cash and integration issues. Underlying cash burn and diluted shares are the critical tests.

**Growth funding.** Growth depends on cash-burn reduction, financing or operating improvement; dilution can absorb upside.

**Ratio cross-check.** Historical revenue CAGR 79.8% (two-year annual interval); current ratio 9.8x; net debt/EBITDA N/M; interest cover -83.3x. FCF margin -98.7% (TTM / Jun '26); OCF/NI -1.9x; diluted-share CAGR 104.7%. FCF less SBC proxy: USD -272.9M. Static pre-commitment cash/burn: 97 months; not a solvency forecast.

**PRICE-FUNDAMENTALS BALANCE: NOT ESTABLISHED**
EV/sales 14.1x; earnings/FCF N/M
Current operations do not establish recurring operating profit; price relies on future commercialization or a turnaround.

Unusual gains, credits, advances, stock compensation or investment intensity limit direct multiple interpretation; see financial note.

**Score / data adjustments.** Earnings-quality subscore capped at 0/4; see company interpretation.

## FINANCIAL STRENGTH: 78/100 | SOUND

| | |
|---|---|
| Profitability | 23 / 25 |
| Credit quality | 14 / 25 |
| Funding | 18 / 20 |
| Regulatory capital | 16 / 20 |
| Allocation | 7 / 10 |

**Financial interpretation.** Evaluate regulatory capital and credit quality rather than industrial debt/FCF ratios. Brazil capital ratios declined as lending grew; higher-risk unsecured lending supports margins but raises losses and funding demands.

**Growth funding.** Capital supports lending growth; credit quality and deposit funding constrain the pace.

**Bank evidence.** June 2026 Brazil prudential CET1 11.9%, CAR 15.7% versus aggregate minimum 10.5%; 90+ NPLs 6.9%. Group credit portfolio USD39.4bn and deposits USD45.3bn. Subsidiary ratios are not a single group capital ratio.

**Ratio cross-check.** Historical revenue CAGR 37.3%; diluted-share CAGR 0.5%. Revenue classification is bank-specific. Industrial FCF is displayed for reconciliation only and excluded from the score.

**PRICE-FUNDAMENTALS BALANCE: CONDITIONAL**
P/E 16.4x; P/TBV 4.8x; ROE 31.6%
Bank screen: P/E, P/TBV and ROE; credit losses and regulatory capital must support the multiple.

Bank-specific comparison; loan-originating OCF and debt are not industrial valuation measures.

**Score / data adjustments.** Bank-specific judgment rubric; no industrial current-ratio, leverage or free-cash score.

Income Jun '26; balance Jun '26; cash Jun '26. Provider Total Debt, generally including leases. Not total liabilities; bank deposits are separate.

| Common dividends | N/D | N/D | N/D | N/D |

N/D = not displayed; N/M = not meaningful. * Debt/current component follows provider classification; not a complete maturity ladder. A latest annual value may repeat in the FY column.

## FINANCIAL STRENGTH: 74/100 | SOUND

| | |
|---|---|
| Profitability | 18 / 25 |
| Credit quality | 17 / 25 |
| Funding | 17 / 20 |
| Regulatory capital | 19 / 20 |
| Allocation | 3 / 10 |

**Financial interpretation.** Regulatory capital and deposits support growth, while fair-value loan accounting, loan sales and consumer credit losses affect earnings quality. Loan-originating cash outflows are not comparable with industrial free cash; share issuance matters.

**Growth funding.** Capital supports lending growth; credit quality and deposit funding constrain the pace.

**Bank evidence.** September 2026 holding-company CET1 16.9% versus 7.0% stated minimum including buffer; total capital 17.0%. Credit-loss measures depend on loan sales and portfolio seasoning. Industrial OCF/FCF ratios are excluded from the score.

**Ratio cross-check.** Historical revenue CAGR 31.6%; diluted-share CAGR 15.1%. Revenue classification is bank-specific. Industrial FCF is displayed for reconciliation only and excluded from the score.

**PRICE-FUNDAMENTALS BALANCE: DEMANDING**
P/E 31.1x; P/TBV N/M; ROE 7.3%
Bank screen: P/E, P/TBV and ROE; credit losses and regulatory capital must support the multiple.

Bank-specific comparison; loan-originating OCF and debt are not industrial valuation measures.

**Score / data adjustments.** Bank-specific judgment rubric; no industrial current-ratio, leverage or free-cash score.

Income Sep '26; balance Sep '26; cash Dec '25. Provider Total Debt, generally including leases. Not total liabilities; bank deposits are separate. Flow dates differ: cash scoring uses FY 2025 / Dec '25.

## FINANCIAL STRENGTH: 79/100 | SOUND

| | |
|---|---|
| Profitability | 24 / 25 |
| Credit quality | 19 / 25 |
| Funding | 13 / 20 |
| Regulatory capital | 17 / 20 |
| Allocation | 6 / 10 |

**Financial interpretation.** Fee and lending earnings are strong, but large repurchases reduced equity relative to the prior year. Track bank versus holding-company capital, fintech deposit concentration and credit exposure; EPS growth partly reflects fewer shares.

**Growth funding.** Capital supports lending growth; credit quality and deposit funding constrain the pace.

**Bank evidence.** June 2026 bank CET1 14.27%, holding-company CET1 11.41%; bank leverage ratio 9.09%. Holding-company equity USD705.4m. Repurchases exceeded trailing earnings and reduce the capital cushion; bank/parent capital are distinguished.

**Ratio cross-check.** Historical revenue CAGR 8.4%; diluted-share CAGR N/D. Revenue classification is bank-specific. Industrial FCF is displayed for reconciliation only and excluded from the score.

**PRICE-FUNDAMENTALS BALANCE: CONDITIONAL**
P/E 9.6x; P/TBV N/M; ROE 29.6%
Bank screen: P/E, P/TBV and ROE; credit losses and regulatory capital must support the multiple.

Bank-specific comparison; loan-originating OCF and debt are not industrial valuation measures.

**Score / data adjustments.** Bank-specific judgment rubric; no industrial current-ratio, leverage or free-cash score.

| Assets | 51,356 | 42,667 | 25,196 | 17,612 |
| Liabilities | 43,522 | 35,919 | 20,845 | 14,541 |
| Book equity | 7,834 | 6,748 | 4,351 | 3,071 |
| Goodwill | 168 | 163 | 149 | 163 |
| Other intangibles | 30.0 | 33.0 | 12.0 | 11.0 |

## CASH FLOW | funding and capital allocation

| Metric | Latest Jun '26 | FY 2025 Dec '25 | FY 2024 Dec '24 | FY 2023 Dec '23 |
|---|---|---|---|---|
| Operating cash | 13,905 | 12,116 | 7,918 | 5,140 |
| CapEx spend (absolute) | 1,496 | 1,343 | 860 | 509 |
| Free cash flow | 12,409 | 10,773 | 7,058 | 4,631 |
| Stock compensation | 280 | 303 | 261 | 167 |
| Common equity issued | N/D | N/D | N/D | N/D |
| Repurchases | -2.0 | -1.0 | -1.0 | -356 |
| Common dividends | N/D | N/D | N/D | N/D |

N/D = not displayed; N/M = not meaningful. * Debt/current component follows provider classification; not a complete maturity ladder. A latest annual value may repeat in the FY column.

## FINANCIAL STRENGTH: 60/100 | SOUND

| | |
|---|---|
| Profit / quality | 19 / 25 |
| Cash generation | 12 / 25 |
| Liquidity | 7 / 20 |
| Leverage / service | 12 / 20 |
| Allocation / dilution | 10 / 10 |

**Financial interpretation.** Wallet/customer funds and loan receivables materially affect consolidated operating cash. Reported FCF is not a simple distributable industrial cash measure. Shipping investment, credit growth and loan losses constrain the cash available to equity.

**Growth funding.** Growth needs reinvestment and credit funding; customer cash is not freely distributable.

**Ratio cross-check.** Historical revenue CAGR 38.3% (two-year annual interval); current ratio 1.1x; net debt/EBITDA 1.9x; interest cover 13.7x. FCF margin 35.3% (TTM / Jun '26); OCF/NI 7.5x; diluted-share CAGR 0.0%. FCF less SBC proxy: USD 12.13B.

**PRICE-FUNDAMENTALS BALANCE: DEMANDING**
P/E 45.3x; P/FCF 6.8x
At least one earnings/cash multiple exceeds 40x; substantial durable growth is needed.

Unusual gains, credits, advances, stock compensation or investment intensity limit direct multiple interpretation; see financial note.

**Score / data adjustments.** Cash subscore capped at 12/25 for advances, stock compensation, financial customer funds or nonrecurring effects. Leverage set to 12/20 for captive finance / customer-financial balances; industrial net-debt ratio is not directly comparable.

Income Jun '26; balance Jun '26; cash Jun '26. Provider Total Debt, generally including leases. Not total liabilities; bank deposits are separate.

| Repurchases | N/D | N/D | N/D | N/D |
| Common dividends | N/D | N/D | N/D | N/D |

N/D = not displayed; N/M = not meaningful. * Debt/current component follows provider classification; not a complete maturity ladder. A latest annual value may repeat in the FY column.

## FINANCIAL STRENGTH: 94/100 | STRONG

| | |
|---|---|
| Profit / quality | 22 / 25 |
| Cash generation | 25 / 25 |
| Liquidity | 20 / 20 |
| Leverage / service | 19 / 20 |
| Allocation / dilution | 8 / 10 |

**Financial interpretation.** Large cash/investment reserves and positive cash generation support operations. Cash accessibility, VIE structure, regulatory exposure, merchant spending and trade restrictions remain material; low multiples do not guarantee shareholder access.

**Growth funding.** Existing cash generation and reserves can support investment; valuation still matters.

**Ratio cross-check.** Historical revenue CAGR 32.1% (two-year annual interval); current ratio 2.6x; net debt/EBITDA -4.6x; interest cover N/M. FCF margin 24.6% (TTM / Jun '26); OCF/NI 1.2x; diluted-share CAGR 0.8%. FCF less SBC proxy: CNY 102.81B.

**PRICE-FUNDAMENTALS BALANCE: SUPPORTED**
P/E 8.4x; P/FCF 6.6x
Both reported earnings and FCF multiples are at or below 25x, with at least sound financial strength.

**Score / data adjustments.** No usable interest-expense ratio; net-cash balance receives a disclosed 4/5 fallback.

Income Jun '26; balance Jun '26; cash Jun '26. Provider Total Debt, generally including leases. Not total liabilities; bank deposits are separate.

N/D = not displayed; N/M = not meaningful. * Debt/current component follows provider classification; not a complete maturity ladder. A latest annual value may repeat in the FY column.

## FINANCIAL STRENGTH: 54/100 | MIXED

| | |
|---|---|
| Profit / quality | 2 / 25 |
| Cash generation | 17 / 25 |
| Liquidity | 18 / 20 |
| Leverage / service | 15 / 20 |
| Allocation / dilution | 2 / 10 |

**Financial interpretation.** Operating cash is strong relative to GAAP profit but stock compensation and deferred revenue contribute. Free cash after an economic stock-compensation charge is much lower; valuation and platform/event liabilities remain separate risks.

**Growth funding.** Some internal growth funding; leverage, cash quality or allocation reduces flexibility.

**Ratio cross-check.** Historical revenue CAGR 25.5% (two-year annual interval); current ratio 1.6x; net debt/EBITDA -39.2x; interest cover -5.0x. FCF margin 29.8% (TTM / Jul '26); OCF/NI 44.8x; diluted-share CAGR 1.4%. FCF less SBC proxy: USD 365.0M.

**PRICE-FUNDAMENTALS BALANCE: NOT ESTABLISHED**
P/E 7189.8x; P/FCF 169.1x
Current operations do not establish recurring operating profit; price relies on future commercialization or a turnaround.

Unusual gains, credits, advances, stock compensation or investment intensity limit direct multiple interpretation; see financial note.

**Score / data adjustments.** Cash subscore capped at 17/25 for advances, stock compensation, financial customer funds or nonrecurring effects.

Income Jul '26; balance Jul '26; cash Jul '26. Provider Total Debt, generally including leases. Not total liabilities; bank deposits are separate.

## BALANCE | claims and liquidity

| Metric | Latest Jun '26 | FY 2025 Dec '25 | FY 2024 Dec '24 | FY 2023 Dec '23 |
|---|---|---|---|---|
| Cash + short investments | 3,053 | 2,487 | 697 | 502 |
| Total debt incl. leases* | 3,515 | 3,667 | 3,555 | 3,177 |
| Reported current debt* | N/D | N/D | N/D | 215 |
| Assets | 8,269 | 7,260 | 5,869 | 5,359 |
| Liabilities | 5,106 | 5,125 | 4,779 | 4,103 |
| Book equity | 3,163 | 2,135 | 1,090 | 1,256 |
| Goodwill | 1,519 | 1,540 | 1,458 | 1,843 |
| Other intangibles | 356 | 397 | 473 | 1,293 |

## CASH FLOW | funding and capital allocation

| Metric | Latest Jun '26 | FY 2025 Dec '25 | FY 2024 Dec '24 | FY 2023 Dec '23 |
|---|---|---|---|---|
| Operating cash | 4,528 | 4,015 | 2,099 | 1,062 |
| CapEx spend (absolute) | N/D | N/D | N/D | N/D |
| Free cash flow | 4,528 | 4,015 | 2,099 | 1,062 |
| Stock compensation | 282 | 210 | 369 | 363 |
| Common equity issued | 25.3 | 25.3 | 41.8 | 25.8 |
| Repurchases | -2,635 | -2,584 | -2,125 | -1,400 |
| Common dividends | N/D | N/D | N/D | N/D |

N/D = not displayed; N/M = not meaningful. * Debt/current component follows provider classification; not a complete maturity ladder. A latest annual value may repeat in the FY column.

## FINANCIAL STRENGTH: 97/100 | STRONG

| | |
|---|---|
| Profit / quality | 25 / 25 |
| Cash generation | 25 / 25 |
| Liquidity | 20 / 20 |
| Leverage / service | 17 / 20 |
| Allocation / dilution | 10 / 10 |

**Financial interpretation.** Current advertising cash generation is substantial relative to investment needs. Platform/privacy changes, customer concentration, buybacks and debt matter; exceptionally high margins should not be extrapolated without stress.

**Growth funding.** Existing cash generation and reserves can support investment; valuation still matters.

**Ratio cross-check.** Historical revenue CAGR 72.5% (two-year annual interval); current ratio 4.3x; net debt/EBITDA 0.1x; interest cover 25.8x. FCF margin 66.3% (TTM / Jun '26); OCF/NI 1.0x; diluted-share CAGR -2.9%. FCF less SBC proxy: USD 4.25B.

**PRICE-FUNDAMENTALS BALANCE: SUPPORTED**
P/E 19.9x; P/FCF 19.1x
Both reported earnings and FCF multiples are at or below 25x, with at least sound financial strength.

Income Jun '26; balance Jun '26; cash Jun '26. Provider Total Debt, generally including leases. Not total liabilities; bank deposits are separate.

N/D = not displayed; N/M = not meaningful. * Debt/current component follows provider classification; not a complete maturity ladder. A latest annual value may repeat in the FY column.

## FINANCIAL STRENGTH: 85/100 | STRONG

| | |
|---|---|
| Profit / quality | 23 / 25 |
| Cash generation | 22 / 25 |
| Liquidity | 18 / 20 |
| Leverage / service | 17 / 20 |
| Allocation / dilution | 5 / 10 |

**Financial interpretation.** Core cash generation remains large, but AI CapEx has absorbed more of it and the latest quarter had negative FCF. The Q3 legal charge and potential settlement cash payments are material obligations beyond headline EPS growth.

**Growth funding.** Existing cash generation and reserves can support investment; valuation still matters.

**Ratio cross-check.** Historical revenue CAGR 22.1% (two-year annual interval); current ratio 1.9x; net debt/EBITDA 0.3x; interest cover 32.9x. FCF margin 11.9% (TTM / Sep '26); OCF/NI 1.8x; diluted-share CAGR -1.1%. FCF less SBC proxy: USD 1.71B.

**PRICE-FUNDAMENTALS BALANCE: DEMANDING**
P/E 20.8x; P/FCF 55.3x
At least one earnings/cash multiple exceeds 40x; substantial durable growth is needed.

Unusual gains, credits, advances, stock compensation or investment intensity limit direct multiple interpretation; see financial note.

**Score / data adjustments.** Earnings-quality subscore capped at 2/4; see company interpretation.

## FINANCIAL STRENGTH: 84/100 | STRONG

| | |
|---|---|
| Profit / quality | 22 / 25 |
| Cash generation | 22 / 25 |
| Liquidity | 18 / 20 |
| Leverage / service | 12 / 20 |
| Allocation / dilution | 10 / 10 |

**Financial interpretation.** The balance sheet supports investment, but weaker sales and a tariff-related refund complicate normalized earnings. Lease obligations, inventory and buybacks should be assessed against a slower demand environment.

**Growth funding.** Existing cash generation and reserves can support investment; valuation still matters.

**Ratio cross-check.** Historical revenue CAGR 7.4% (two-year annual interval); current ratio 2.2x; net debt/EBITDA 0.3x; interest cover N/M. FCF margin 12.2% (TTM / Aug '26); OCF/NI 1.4x; diluted-share CAGR -3.2%. FCF less SBC proxy: USD 1.26B.

**PRICE-FUNDAMENTALS BALANCE: CONDITIONAL**
P/E 8.6x; P/FCF 8.6x
Low reported multiples need earnings/cash normalization before price can be called supported.

Unusual gains, credits, advances, stock compensation or investment intensity limit direct multiple interpretation; see financial note.

| Other intangibles | 4,343 | 727 | 813 | 1,042 |

## CASH FLOW | funding and capital allocation

| Metric | Latest Sep '26 | FY 2025 Dec '25 | FY 2024 Dec '24 | FY 2023 Dec '23 |
|---|---|---|---|---|
| Operating cash | 19,216 | 4,987 | 2,583 | 1,186 |
| CapEx spend (absolute) | 2,101 | 1,277 | 883 | 744 |
| Free cash flow | 17,115 | 3,710 | 1,700 | 442 |
| Stock compensation | N/D | N/D | N/D | N/D |
| Common equity issued | N/D | N/D | N/D | N/D |
| Repurchases | -6,371 | -3,316 | -43.0 | N/D |
| Common dividends | -474 | -275 | N/D | N/D |

N/D = not displayed; N/M = not meaningful. * Debt/current component follows provider classification; not a complete maturity ladder. A latest annual value may repeat in the FY column.

## FINANCIAL STRENGTH: 69/100 | SOUND

| | |
|---|---|
| Profit / quality | 17 / 25 |
| Cash generation | 18 / 25 |
| Liquidity | 7 / 20 |
| Leverage / service | 19 / 20 |
| Allocation / dilution | 8 / 10 |

**Financial interpretation.** Backlog and customer advance collections support very strong cash, but not all advance cash is available for distributions. Wind liabilities, future equipment delivery, acquisitions and grid capacity spending are material commitments.

**Growth funding.** Advances support funding, but cash is tied to future delivery obligations.

**Ratio cross-check.** Historical revenue CAGR 7.0% (two-year annual interval); current ratio 0.8x; net debt/EBITDA -2.8x; interest cover N/M. FCF margin 38.9% (TTM / Sep '26); OCF/NI 1.9x; diluted-share CAGR 0.4%.

**PRICE-FUNDAMENTALS BALANCE: CONDITIONAL**
P/E 23.1x; P/FCF 13.8x
Low reported multiples need earnings/cash normalization before price can be called supported.

Unusual gains, credits, advances, stock compensation or investment intensity limit direct multiple interpretation; see financial note.

**Score / data adjustments.** Cash subscore capped at 18/25 for advances, stock compensation, financial customer funds or nonrecurring effects. No usable interest-expense ratio; net-cash balance receives a disclosed 4/5 fallback.

Income Sep '26; balance Sep '26; cash Sep '26. Provider Total Debt, generally including leases. Not total liabilities; bank deposits are separate.

| Goodwill | 5,152 | 4,849 | 4,866 | 5,091 |
| Other intangibles | N/D | 1,767 | 1,715 | 1,692 |

## CASH FLOW | funding and capital allocation

| Metric | Latest Sep '26 | FY 2025 Dec '25 | FY 2024 Dec '24 | FY 2023 Dec '23 |
|---|---|---|---|---|
| Operating cash | 14,821 | 12,485 | 13,260 | 11,301 |
| CapEx spend (absolute) | 32,249 | 24,053 | 24,330 | 24,928 |
| FCF incl. nuclear fuel | -18,011 | -12,121 | -11,469 | -13,812 |
| Stock compensation | N/D | N/D | N/D | N/D |
| Common equity issued | 979 | 2,038 | 48.0 | 4,514 |
| Repurchases | N/D | N/D | N/D | N/D |
| Common dividends | -5,088 | -4,680 | -4,235 | -3,782 |

N/D = not displayed; N/M = not meaningful. * Debt/current component follows provider classification; not a complete maturity ladder. A latest annual value may repeat in the FY column.

## FINANCIAL STRENGTH: 44/100 | MIXED

| | |
|---|---|
| Profit / quality | 25 / 25 |
| Cash generation | 4 / 25 |
| Liquidity | 2 / 20 |
| Leverage / service | 5 / 20 |
| Allocation / dilution | 8 / 10 |

**Financial interpretation.** Reported FCF deducts nuclear fuel as well as CapEx (latest nuclear outflow USD583m). Negative consolidated FCF reflects a large investment program and creates financing needs. Project debt, utility recovery, interest rates, storms and the proposed Dominion combination require a utility-specific interpretation.

**Growth funding.** Reserves support investment, but current expansion consumes cash and may need financing.

**Ratio cross-check.** Historical revenue CAGR -1.3% (two-year annual interval); current ratio 0.5x; net debt/EBITDA 8.1x; interest cover 14.8x. FCF margin -62.5% (TTM / Sep '26); OCF/NI 1.3x; diluted-share CAGR 1.0%. Static pre-commitment cash/burn: 4 months; not a solvency forecast.

**PRICE-FUNDAMENTALS BALANCE: CONDITIONAL**
P/E 14.8x; P/FCF N/M
Only one meaningful earnings/cash multiple is available; the missing or negative counterpart limits price support.

Project or utility cash is subject to asset debt, required investment, tax-equity or regulatory claims; this is not a DCF or residual-equity appraisal.

Income Sep '26; balance Sep '26; cash Sep '26. Provider Total Debt, generally including leases. Not total liabilities; bank deposits are separate.

## FINANCIAL STRENGTH: 66/100 | SOUND

| | |
|---|---|
| Profit / quality | 9 / 25 |
| Cash generation | 18 / 25 |
| Liquidity | 20 / 20 |
| Leverage / service | 19 / 20 |
| Allocation / dilution | 0 / 10 |

**Financial interpretation.** Reported net profit is much higher than operating profit and must be normalized for tax and other unusual effects. Operating cash is positive but smaller. Acquisitions, stock issuance and future orders determine sustainable per-share growth.

**Growth funding.** Some internal growth funding; leverage, cash quality or allocation reduces flexibility.

**Ratio cross-check.** Historical revenue CAGR 43.3% (two-year annual interval); current ratio 2.4x; net debt/EBITDA -6.0x; interest cover N/M. FCF margin 6.4% (TTM / Jun '26); OCF/NI 0.3x; diluted-share CAGR 21.1%. FCF less SBC proxy: USD 3.9M.

**PRICE-FUNDAMENTALS BALANCE: DEMANDING**
P/E 9.3x; P/FCF 63.0x
At least one earnings/cash multiple exceeds 40x; substantial durable growth is needed.

Unusual gains, credits, advances, stock compensation or investment intensity limit direct multiple interpretation; see financial note.

**Score / data adjustments.** Earnings-quality subscore capped at 0/4; see company interpretation. No usable interest-expense ratio; net-cash balance receives a disclosed 4/5 fallback.

Income Jun '26; balance Jun '26; cash Jun '26. Provider Total Debt, generally including leases. Not total liabilities; bank deposits are separate.

| Common dividends | N/D | N/D | N/D | N/D |

N/D = not displayed; N/M = not meaningful. * Debt/current component follows provider classification; not a complete maturity ladder. A latest annual value may repeat in the FY column.

## FINANCIAL STRENGTH: 88/100 | STRONG

| | |
|---|---|
| Profit / quality | 19 / 25 |
| Cash generation | 19 / 25 |
| Liquidity | 20 / 20 |
| Leverage / service | 20 / 20 |
| Allocation / dilution | 10 / 10 |

**Financial interpretation.** Latest income and cash-flow views have different interim periods; matched annual flows are used for cash-margin scoring. Q3 cash generation weakened sharply. Storage and future transformer products must earn actual cash returns.

**Growth funding.** Existing cash generation and reserves can support investment; valuation still matters.

**Ratio cross-check.** Historical revenue CAGR -19.8% (two-year annual interval); current ratio 4.1x; net debt/EBITDA -1.9x; interest cover 44.2x. FCF margin 6.5% (FY 2025 / Dec '25); OCF/NI 0.8x; diluted-share CAGR -2.8%. FCF less SBC proxy: USD -53.3M.

**PRICE-FUNDAMENTALS BALANCE: CONDITIONAL**
P/E 36.6x; P/FCF 29.1x
Price support is mixed; growth, cash conversion and financing must justify the multiple.

Unusual gains, credits, advances, stock compensation or investment intensity limit direct multiple interpretation; see financial note.

**Score / data adjustments.** Cash scoring uses matched FY 2025 / Dec '25; latest income/cash statements have different dates.

Income Jun '26; balance Sep '26; cash Sep '26. Provider Total Debt, generally including leases. Not total liabilities; bank deposits are separate. Flow dates differ: cash scoring uses FY 2025 / Dec '25.

## FINANCIAL STRENGTH: 23/100 | WEAK

| | |
|---|---|
| Profit / quality | 2 / 25 |
| Cash generation | 2 / 25 |
| Liquidity | 16 / 20 |
| Leverage / service | 0 / 20 |
| Allocation / dilution | 3 / 10 |

**Financial interpretation.** Backlog is large but low project margins, delivery delays and cash use constrain growth funding. Cash and credit facilities are not interchangeable. Battery supply commitments and warranties can absorb additional liquidity.

**Growth funding.** Growth depends on cash-burn reduction, financing or operating improvement; dilution can absorb upside.

**Ratio cross-check.** Historical revenue CAGR 1.0% (two-year annual interval); current ratio 1.3x; net debt/EBITDA N/M; interest cover -24.1x. FCF margin -4.4% (TTM / Jun '26); OCF/NI N/M; diluted-share CAGR 5.9%. FCF less SBC proxy: USD -133.5M. Static pre-commitment cash/burn: 35 months; not a solvency forecast.

**PRICE-FUNDAMENTALS BALANCE: NOT ESTABLISHED**
EV/sales 0.4x; earnings/FCF N/M
Current operations do not establish recurring operating profit; price relies on future commercialization or a turnaround.

Income Jun '26; balance Jun '26; cash Jun '26. Provider Total Debt, generally including leases. Not total liabilities; bank deposits are separate.

## FINANCIAL STRENGTH: 24/100 | WEAK

| | |
|---|---|
| Profit / quality | 11 / 25 |
| Cash generation | 0 / 25 |
| Liquidity | 13 / 20 |
| Leverage / service | 0 / 20 |
| Allocation / dilution | 0 / 10 |

**Financial interpretation.** Tax-equity, asset debt and third-party system sales make GAAP earnings and company Cash Generation different from ordinary free cash. Consolidated project value is not the residual value available to common shareholders.

**Growth funding.** Growth depends on cash-burn reduction, financing or operating improvement; dilution can absorb upside.

**Ratio cross-check.** Historical revenue CAGR 14.4% (two-year annual interval); current ratio 1.4x; net debt/EBITDA 17.3x; interest cover 0.1x. FCF margin -63.6% (TTM / Jun '26); OCF/NI -0.5x; diluted-share CAGR 10.3%. FCF less SBC proxy: USD -2.32B. Static pre-commitment cash/burn: 4 months; not a solvency forecast.

**PRICE-FUNDAMENTALS BALANCE: FUNDING-SENSITIVE**
P/E 4.9x; P/FCF N/M
A low multiple alone does not offset weak internal funding or financial resilience.

Project or utility cash is subject to asset debt, required investment, tax-equity or regulatory claims; this is not a DCF or residual-equity appraisal.

Income Jun '26; balance Jun '26; cash Jun '26. Provider Total Debt, generally including leases. Not total liabilities; bank deposits are separate.

## FINANCIAL STRENGTH: 50/100 | MIXED

| | |
|---|---|
| Profit / quality | 25 / 25 |
| Cash generation | 4 / 25 |
| Liquidity | 13 / 20 |
| Leverage / service | 2 / 20 |
| Allocation / dilution | 6 / 10 |

**Financial interpretation.** Operating projects generate cash, but expansion CapEx far exceeds consolidated operating cash and project debt is large. IFRS interest classification, minority interests and asset-sale gains complicate equity cash comparisons.

**Growth funding.** Reserves support investment, but current expansion consumes cash and may need financing.

**Ratio cross-check.** Historical revenue CAGR 38.2% (two-year annual interval); current ratio 1.1x; net debt/EBITDA 11.2x; interest cover 2.1x. FCF margin -366.5% (TTM / Jun '26); OCF/NI 3.8x; diluted-share CAGR 3.6%. FCF less SBC proxy: USD -2.16B. Static pre-commitment cash/burn: 7 months; not a solvency forecast.

**PRICE-FUNDAMENTALS BALANCE: DEMANDING**
P/E 117.5x; P/FCF N/M
Only one meaningful earnings/cash multiple is available; the missing or negative counterpart limits price support.

Project or utility cash is subject to asset debt, required investment, tax-equity or regulatory claims; this is not a DCF or residual-equity appraisal. Earlier market-cap/share reconciliation issues remain unresolved; no precise fair-value claim is made.

**Score / data adjustments.** Cash subscore capped at 14/25 for advances, stock compensation, financial customer funds or nonrecurring effects.

Income Jun '26; balance Jun '26; cash Jun '26. Provider Total Debt, generally including leases. Not total liabilities; bank deposits are separate.

## FINANCIAL STRENGTH: 79/100 | SOUND

| | |
|---|---|
| Profit / quality | 22 / 25 |
| Cash generation | 20 / 25 |
| Liquidity | 10 / 20 |
| Leverage / service | 17 / 20 |
| Allocation / dilution | 10 / 10 |

**Financial interpretation.** Recent margins and cash are strong but U.S. trade/customs outcomes can interrupt deliveries. Restricted cash, a large planned cell investment and equity financing must be assessed before treating low headline P/E as sustainable value.

**Growth funding.** Existing cash generation and reserves can support investment; valuation still matters.

**Ratio cross-check.** Historical revenue CAGR 161.7% (two-year annual interval); current ratio 1.1x; net debt/EBITDA 0.1x; interest cover 52.8x. FCF margin 14.9% (TTM / Jun '26); OCF/NI 2.0x; diluted-share CAGR -14.5%. FCF less SBC proxy: USD 68.3M.

**PRICE-FUNDAMENTALS BALANCE: CONDITIONAL**
P/E 1.6x; P/FCF 2.0x
Low reported multiples need earnings/cash normalization before price can be called supported.

Unusual gains, credits, advances, stock compensation or investment intensity limit direct multiple interpretation; see financial note.

Income Jun '26; balance Jun '26; cash Jun '26. Provider Total Debt, generally including leases. Not total liabilities; bank deposits are separate.

## FINANCIAL STRENGTH: 24/100 | WEAK

| | |
|---|---|
| Profit / quality | 9 / 25 |
| Cash generation | 0 / 25 |
| Liquidity | 5 / 20 |
| Leverage / service | 0 / 20 |
| Allocation / dilution | 10 / 10 |

**Financial interpretation.** Consolidated debt and project investment are large relative to common equity value. Storage growth must offset module losses, working capital and expansion spending; non-recourse project debt still has claims on project cash.

**Growth funding.** Growth depends on cash-burn reduction, financing or operating improvement; dilution can absorb upside.

**Ratio cross-check.** Historical revenue CAGR -14.3% (two-year annual interval); current ratio 1.0x; net debt/EBITDA 9.3x; interest cover 0.5x. FCF margin -31.4% (TTM / Jun '26); OCF/NI N/M; diluted-share CAGR -3.5%. FCF less SBC proxy: USD -1.59B. Static pre-commitment cash/burn: 11 months; not a solvency forecast.

**PRICE-FUNDAMENTALS BALANCE: NOT ESTABLISHED**
EV/sales 1.3x; earnings/FCF N/M
Positive recurring earnings and residual free cash do not jointly support a current valuation comparison.

Project or utility cash is subject to asset debt, required investment, tax-equity or regulatory claims; this is not a DCF or residual-equity appraisal.

Income Jun '26; balance Jun '26; cash Jun '26. Provider Total Debt, generally including leases. Not total liabilities; bank deposits are separate.

**Per-share reconciliation.** Reported diluted EPS does not reconcile by simply dividing reported common net income by diluted shares. Numerator / subsidiary dilution differences are unresolved here; EPS is retained as reported, not independently reconstructed.

N/D = not displayed; N/M = not meaningful. * Debt/current component follows provider classification; not a complete maturity ladder. A latest annual value may repeat in the FY column.

## FINANCIAL STRENGTH: 55/100 | MIXED

| | |
|---|---|
| Profit / quality | 2 / 25 |
| Cash generation | 12 / 25 |
| Liquidity | 18 / 20 |
| Leverage / service | 15 / 20 |
| Allocation / dilution | 8 / 10 |

**Financial interpretation.** Recent positive cash includes inventory/working-capital normalization and tariff-related benefits while GAAP losses remain. A sustainable turnaround requires repeat cash earnings without temporary refunds.

**Growth funding.** Some internal growth funding; leverage, cash quality or allocation reduces flexibility.

**Ratio cross-check.** Historical revenue CAGR -36.9% (two-year annual interval); current ratio 2.0x; net debt/EBITDA N/M; interest cover -5.6x. FCF margin 6.8% (TTM / Jun '26); OCF/NI N/M; diluted-share CAGR 1.7%. FCF less SBC proxy: USD 8.6M.

**PRICE-FUNDAMENTALS BALANCE: NOT ESTABLISHED**
P/E N/M; P/FCF 19.6x
Current operations do not establish recurring operating profit; price relies on future commercialization or a turnaround.

Unusual gains, credits, advances, stock compensation or investment intensity limit direct multiple interpretation; see financial note.

**Score / data adjustments.** Cash subscore capped at 12/25 for advances, stock compensation, financial customer funds or nonrecurring effects.

Income Jun '26; balance Jun '26; cash Jun '26. Provider Total Debt, generally including leases. Not total liabilities; bank deposits are separate.

## FINANCIAL STRENGTH: 35/100 | WEAK

| | |
|---|---|
| Profit / quality | 0 / 25 |
| Cash generation | 0 / 25 |
| Liquidity | 12 / 20 |
| Leverage / service | 15 / 20 |
| Allocation / dilution | 8 / 10 |

**Financial interpretation.** June cash predates the GeoPura cash payment and new-share issuance. A simple pre-deal runway overstates current flexibility. Integration, recurring service margins and hydrogen supply economics must reduce operating losses.

**Growth funding.** Growth depends on cash-burn reduction, financing or operating improvement; dilution can absorb upside.

**Ratio cross-check.** Historical revenue CAGR -1.5% (two-year annual interval); current ratio 11.2x; net debt/EBITDA N/M; interest cover -28.4x. FCF margin -35.1% (TTM / Jun '26); OCF/NI N/M; diluted-share CAGR 0.2%. FCF less SBC proxy: USD -40.3M. Static pre-commitment cash/burn: 163 months; not a solvency forecast.

**PRICE-FUNDAMENTALS BALANCE: NOT ESTABLISHED**
EV/sales 0.1x; earnings/FCF N/M
Current operations do not establish recurring operating profit; price relies on future commercialization or a turnaround.

Earlier market-cap/share reconciliation issues remain unresolved; no precise fair-value claim is made.

**Score / data adjustments.** Liquidity capped at 12/20: June reserves precede the August acquisition cash payment.

## FINANCIAL STRENGTH: 23/100 | WEAK

| | |
|---|---|
| Profit / quality | 0 / 25 |
| Cash generation | 0 / 25 |
| Liquidity | 5 / 20 |
| Leverage / service | 15 / 20 |
| Allocation / dilution | 3 / 10 |

**Financial interpretation.** Cash is small relative to recurring losses and project spending. Acquired solar assets and commissioning are not yet a proven self-funding platform. Additional financing, possible dilution and listing risk dominate near-term financial strength.

**Growth funding.** Growth depends on cash-burn reduction, financing or operating improvement; dilution can absorb upside.

**Ratio cross-check.** Historical revenue CAGR -20.7% (two-year annual interval); current ratio 1.6x; net debt/EBITDA N/M; interest cover -39.1x. FCF margin N/D (TTM / Jun '26); OCF/NI N/M; diluted-share CAGR N/D. FCF less SBC proxy: USD -12.2M. Static pre-commitment cash/burn: 6 months; not a solvency forecast.

**PRICE-FUNDAMENTALS BALANCE: NOT ESTABLISHED**
EV/sales N/M; earnings/FCF N/M
Current operations do not establish recurring operating profit; price relies on future commercialization or a turnaround.

**Score / data adjustments.** Insufficient comparable diluted-share history: allocation receives a conservative 3/10, not a zero-dilution assumption.

Income Jun '26; balance Jun '26; cash Jun '26. Provider Total Debt, generally including leases. Not total liabilities; bank deposits are separate.
